speaker only...was only $30 and had nice sound...but I
can't find them any more...I just think that putting
the whole radio up there would be bothersome...I wish
the speaker/mics we use at work weren't $100
each...I'd grab one for my scanner!

My PRO-94 seems to have a problem when placed next to
certain scanners...it developes a kind of hissing
squeal-type noise when they both end up on the same
frequency...I haven't tested this with my PRO-93, but
it does it with my BC60XLT...

I can't help you with the Priority question, because
there isn't much trunking in my area, so I don't use
the ID lists on my PRO-94...

This is normal. Scanners and other radios combine two or more lower frequencies to create the frequency of interest. This causes interference to the radio itself (birdies) and to other radios nearby. There isn't anything you can do about this unless you're willing to go back to crystal control...

Can you explain more about this idea of created frequencies? Are you saying that when my scanner says "155.73" that what it's actually recieving are two other frequencies?

Railfan,

To be fair are you comparing the Bearcat to the pro-94 with only 30 channels enabled in the 94. It does take a little longer to scan 500 channels than 30.

Just a thought.

I compared them locked in on one frequebcy as well as scanning all 100 or so AAR channels. Same
result. The PRO-94 fell down.

From my experience on my radio, leaving it off will alow you to pick up IDs like 209,18,3218; numbers not divisble by 16 showing a special status.

I think what the manual is trying to say is only if you have IDs programmed in the scan lists and are using those lists, the scanner won't pick up the changed ID if it is tagged (changed) with a s-bit status code.

Example: If you have 16 programmed in your list and you receive it with a +2 (emergency) tag, the ID would then be 18 and that's not in the scan list so you would miss the call.

I've owned several Radio Shack scanners and several Bearcat scanners and the Bearcats always out performed the Radio Shack. I currently have a PRO-92 and it is deaf. The speaker is very tinny also. I have a Bearcat BC-3000 and it hears things the PRO-92 doesn't. Also have a desk top Bearcat BC895XLT and it is the best one I ever had. Aircraft band is excellent. 800 Mhz is excellent and I can hear the police on 450 MHz from a town 50 miles away. Full quieting. I know I'm not comparing to the PRO 94, but my PRO 92 was a bad buy.

I also have a Pro-92; great radio. It's programmed with conventional, Moto trunked,and EDACS trunked systems, and all work well. ' Can't beat having the CTCSS and alpha tags. I also own a Pro-2050 (895 without the CTCSS); incredible reception. I was going to sell it just to "trim the herd" (22 radios), but decided to keep it. It now sets here on the desk next to me. I guess it's just a matter of what one likes. I also own two Uniden hand-helds. Almost never use them because of the lack of battery flexibility. Just bought an Icom R-2. Awesome little radio !!!!!

On Wed, 21 Aug 2002 10:02:18 -0500, kcmoscan wrote:

>Can you explain more about this idea of created frequencies? Are you saying
>that when my scanner says "155.73" that what it's actually recieving are two
>other frequencies?

Well, no, not exactly. The architecture of the receiver in the 94 (and most other radio receivers you will run across) is called the 'heterodyne' system. Heterodyning is the process of mixing two (or more) signals together in a nonlinear circuit (a 'mixer'). This produces four resultant outputs; the original two signals, the sum of the original signals, and the difference between the original signals.

In a heterodyne receiver, the desired RF frequency is heterodyned (or 'beat') against a local oscillator (LO) to produce the desired 'intermediate frequency' (IF), commonly 10.7 MHz or 21.4 MHz. The LO can run on either the high side or low side of the desired signal. Assuming the IF is 10.7 MHz in this case, the LO could run at either 145.03 or 166.43 MHz to receive 155.73 MHz. The 10.7 MHz IF output is then filtered, amplified, limited, and demodulated; the other three resultants at the output of the limiter are eliminated by the tuned circuits of the IF. More sophisticated receivers may have a second mixer and IF stage running at a different frequency; this is called 'dual conversion'. Heterodyning is used because it is easier (and cheaper) to build stable amplifier and filter circuits at lower frequencies than at higher frequencies; the first mixer may or may not be preceded by a single stage of RF amplification ('front end') to boost the incoming signal before mixing. The highest performance receivers often have no front end amplifier.

Where the problems come in is that *any* two signals can mix together in *any* nonlinear circuit and produce an output. Two scanners with the same LO and/or IF schemes could 'leak' signals into each other, which then mix together and produce an audible output. Strong RF signals can also overload and mix together in the front end and produce an output; for example, two strong 800 MHz signals that happen to be about 10.7 MHz apart can produce an output at the IF frequency (intermodulation distortion, or 'intermod'). This can happen in any receiver (had any TV interference from a radio transmitter lately?), or even externally to the receiver; a rusty joint on a chain-link fence or rain gutter can form a crude diode junction (nonlinear element), mixing and re-radiating any strong signals that happen to be in the area. The other signal that can mathematically produce the desired IF frequency from a given LO (image frequency) can also come through if

strong enough, particularly with radios that have fixed-tuned broadband (i.e. non-tracking) front ends.

Other receiver types of interest are regenerative, super-regenerative, direct conversion, and autodyne.

From: joetortorelli
Topic: 1952 Message: 1965

2 things:

#1- Thanks for the help with the priority problemo. That's exactly what it was... that I wasn't entering the (2) seperate numbers... why couldn't they have made that a teeny bit easier to understand? (Then again, it *was* late at night and perhaps I was reading over something) ;-)

#2- I thought my reception problem was an issue with the scanners side by side... but unfortunately, it's not. It happens only in some areas more than others, but *always* in the area when I listen to it most... (like right here on my desk... go figure!) I've tried (2) antennas... the OEM, and an OEM antenna from my Pro-56 (I think that's the correct model). The Pro56 ant works better with the Pro92 & 93, but doesn't do enough to rid the static hiss from the 94. I try not to let this bother me too much, because the 94 isn't my priority scanner... however, I do want to use it because of it's channel capacity, and I know it *never* did this before. Maybe it's getting jealous because I favor the 92 and the 93 first. heh... Perhaps I should seek counseling for all 3. All kidding aside... could this possibly be the scanner getting tired after (2) years? I dunno... any input is helpful. Thanks for all the replies folks.

I will agree the Radio Shacks usually can use AA cells. I do like that feature. The Bearcats are usually custom battery packs and expensive. I did have my 600 ma. hr. Bearcat battery packs rebuilt by a battery dealer in Southern PA and he put 1600 ma. hr. Nickel Metal Hydrides in them for half the price of a new Bearcat pack. Every one likes a different brand for a different reason. That's what makes life great.

First off, plug in a set of headphones and I'll bet most of the static you are hearing goes away. The internal speaker on the Pro-94 is horrible. It causes all sorts of static, popping, and whining noises that aren't reception problems at all. An external speaker clears this up but isn't terribly convenient. I'm looking for a suitable replacement speaker but have not found one yet that will fit without modifications to the case.

Are you only getting these sounds on a specific frequency range? Since it only happens certain areas it would seem to be a problem with intermodulation. The offending signal can come from just about anywhere. A local TV or radio transmitter, computers (a big one there!), leaking cable system, even power lines can cause this. Find the band that is getting most of the noise and scan the frequencies just above it. Look for signals that shouldn't be there, like TV sound on the marine bands, broadcast radio on weather bands, etc. Once you've got the signal isolated you can track it down. The antenna is more or less directional when pointed at a signal source. Scout around pointing and listening for where the signal is strongest. A scanner or radio with an S-meter will help quite a bit. If you do find it hopefully it is something you have the control to fix.

From: Mike
Topic: 1952 Message: 1970

Mostly image rejection, meaning the scanner doesn't 'hear' something on a frequency that isn't the actual transmitting frequency. Intermod is also reduced. The Pro-94 and most modern scanners are triple conversion, so when the scanner picks up a signal it's on the actual frequency rather than something else.

>So...what benefit is Super Hederodyne? What good is it
>compaired to any other way, besides maybe price?

Right. Other advantages are stability and selectivity. Good RF
filters that determine your ultimate selectivity are much easier to
make for lower frequencies. A strong nearby signal will blow right
through into a direct conversion receiver, and a regen/super-regen can
tend to have stability problems. Autodyne are dead simple, and as
such, lack the circuitry for good selectivity and image rejection; they
tend to be used where cost is the primary factor and superior
perfromance is not needed, such as in garage door openers. Image
rejection is greatly enhanced in a superhet design by using a high IF
with simple filtering first, then converting to a much lower IF with
crystal/ceramic/mechanical filters to determine ultimate selectivity.

In the end, it's all about money. Superhet is the easiest and cheapest
to build that gives decent performance; and if you throw big bucks at
it, they are stellar performers.

From: genecola79
Topic: 1976 Message: 1976

Hello

I just brought a new pro-94 and i tried to search for transmission within the range 890-960 mhz but nothing came up. I read up tutorials online and I still can't figured out the channels thing. I need some help!! Thanks!

1977. RE: [pro94owners] NEWBIE* Scanning Frequencies

From: Glen Tubbesing
Topic: 1976 Message: 1977

A few questions...

First, are you using the stock rubber duck antenna? If so, it is notoriously weak in the 900 band. You may want to get a more sensitive antenna for that frequency range. Also, you may be in an area that doesn't use those frequencies, or has very limited use, and you just happened to search when no one was on. How long were you searching? A few minutes, a few hours, or a few days? If there's anything on those frequencies, the longer you listen, the better your chances of catching something.

Second, you never mentioned what city you're in. This is an international group, so it would be beneficial to mention where you're trying to find frequencies, since there may be someone near you in the group who can help you out.

Third, I don't understand what you mean by the "channels thing." Can you please be more specific?

Thanks for replying.

Yes, I'm using a stock rubber duck antenna, and the reception is not good :(. Very weak.. How far can it reach? Maybe a couple of blocks? I am searching for a couple of days now, and I came up with some.. thanks for the advice. i've also figured out the channel thing, doesn't mattered. thanks again.

From: Glen Tubbesing
Topic: 1976 Message: 1979

Well, I live about a mile and a half away from the Las Vegas Strip, and several of the hotels there have 900 MHz trunked systems. Using the stock antenna, I can receive a rather scratchy signal on one of the systems, but I doubt that I'd be able to track the system from much further away. Their transmitter is about 500' up, and I'm on the second story of an apartment. The 800 MHz trunked systems with transmitters on the surrounding mountains or the tallest buildings come in fine with this antenna.

Have you found any resources to tell you whether or not there is any 900 MHz activity in your area?

Right now, I haven't found any resources that indicates there are any trunked systems around my area. :(I do however know that most of the cabbies here uses trunked system. It is true that you have to key in the exact frequencies of the trunked system and its systems(E1, Ed, E2-800, E2-900 ...)in order to receiver its transmission? I'm not very sure on how to go about doing that, because you cannnot just search on it with direct search, can you?

Sincerely,
Brandon

1981. Pro-94 & Pro-94a differences?

Yahoo group: pro94owners
Date: 2002-08-29 18:30:25 UTC
From: john_hainsworth
Topic: 1981 Message: 1981

I've just purchased a Pro-94, what are the differences between it and the 94a? Also, I looked on the R/S website on Monday, they had a Pro-95 listed, but none of the local stores had heard of it. It basically looked like the 94, with the alphanumeric display and PC interface characteristics of the 93, but with 1000 channels. That's probably why the price dropped so dramatically on the 94, I got mine for $169.99. The Pro-95 web page has since disappeared from the online catalog. Anyone heard of this? Thanks in advance for any info.

1982. Re: [pro94owners] Pro-94 & Pro-94a differences?

Yahoo group: pro94owners
Date: 2002-08-29 19:39:19 UTC
From: Mike
Topic: 1981 Message: 1982

The Pro-94a can scan both trunked systems and conventional frequencies at the same time. The Pro-94 will not scan conventional frequencies when trunk mode is on. I saw that the Pro-94's base price dropped to $199 and it's on sale right now. If you just purchased it new it will be the A version. Look at the catalog number on the manual or on the back of the scanner, there should be a white 'A' enclosed in a box after the numbers.

The Pro-95 isn't even in the warehouses yet, so who knows when it will be available. Looks like an interesting scanner and trunks some of the newer Motorola systems.

Has RS dumped the Pro-2053? It's no longer in the online catalog and I have not seen it in stores either.

PC Programmable, alpha display, 1000 channels. I can't find any technical specs on it so I can't compare its sensitivity etc to other scanners. I'm also not sure if it's split into two 500 channel master banks or not.

1989. Pro-94 Cell frequencies....

Yahoo group: pro94owners
Date: 2002-08-31 18:36:09 UTC
From: gastro_man2001
Topic: 1989 Message: 1989

Hello people. i'm returning to this game after YEARS of messing around with it. Last scanner I had was Radio Shack's 10 channel scanner back in the late 80's. Forgot the name of it. I decided to get back into it and I bought this pro-94 which was on sale at Radio Shack for 169 bux (I HOPE that was a good deal).
Anyways, I've noticed that I can't hit up the cellular bands with this scanner. Does anyone know if there is a "way" that I can "tinker" with it so that it can get the cellphone frequencies? Any help would be appreciated.....

1990. Any interesting frequencies?

One more thing. I live in the greater Los Angeles area, and was wondering if there are any interesting frequencies to listen to. I found a few websites with some cool frequencies on them, but would lvoe to know if there is anyone in ther L.A. area that knows of any that get some fun stuff to listen to on them. Thanks in advance for any info.

There has been much discussion about modification of scanners to listen to cell phone conversations in this group. It has not been legal to listen to them for ten years and no one who might know how to make the modifications would or should share that information with you. That would put them in legal jeopardy.

As far as frequencies to listen to in the Los Angeles Area, go into the same Radio Shack store where you purchased your Pro 94A... There is a big difference between the Pro 94 and the Pro 94A, and get a copy of the directory, Police Call.

There is lots to listen to from the LAFD and LA County Fire to all the smaller fire districts to all the police, Sheriff, CHP, and other law enforcement. You can listen to taxis and railroads, trucking companies, radio and television reporters in the field, and a zillion other things. And, to listen to any of that stuff may be done unrestricted.

No. They are locked out by law on all newer radios. If you purchase a cheap dual conversion scanner, rather than a triple conversion one, you can hear the cell phone stuff on the image frequency. However, with most going digital now, there's not too much left to listen to.

I just bought my Pro-94 last week. On the sticker on the back, it says "05-A-02". Does that mean that I have the Pro-94A version?

It's really hard to see with the belt clip attached. The boxed "A" is just
below the belt clip screw on the right (looking at the back) and is very
small. RM~

Check the back cover of your manual. Look where it says Cat. No. XX-XXX. If there is the letter "A" inside of a square after the catalog number, then you have the Pro-94A. I just bought mine last week on sale for $169.00. It is one hell of a handheld scanner.

From: Gastro Man
Topic: 1981 Message: 2000

If there is some one out there that is really good with the Pro-94a, I could use your help. I like to use the "limit" scan option where you can scan entire blocks of frequencies at a time. Does anyone know if there's a way to STORE these limit scans so that you don't have to program them in everytime you want to scan a particular frequency block? ANY help would be GREATLY appreciated!

TNX. I had to unscrew the belt clip but found the boxed "A".
Unfortunately, I bought my in early August 2002 when it was
$199.00 which, with tax, meant I paid $32.48. I would have spent
that at RS I guess. Oh well, what's done, is done.

Again TNX to all who answered my query.

From: Mike
Topic: 1981 Message: 2002

The answer is no, but yes, but no. The Pro-94 does not have any scan-edge memories other than the one for the limit search. You can enter one search edge in a channel, change to that channel in manual mode, then press up or down to search from that frequency, then press the opposite arrow to search back in the opposite direction. Not really the same thing, however.

Tim and Group,

You can still get the difference refunded! There is a 30 day price "guarantee" to protect consumers. If it goes on sale within 30 days of your purchase, you get the $30 back! Even better, as I found out, if you use the RS Answers credit card you get a SIXTY (60) DAY price guarantee!! I had purchased mine back in July and was able to get the difference back. Go back in and try; what do you have to lose??

For anyone about to buy it, if you apply for the RS credit card, you get an additional 10% off if it is approved, PLUS a 90 days same as cash billing option. $17 plus free use of their money for 90 days...seems like a no brainer to me!

Mike,

Try this web site:

<http://www.wiscomm.com/media/tpamedia.htm>

Also, do a limit search on 450.000 - 451.000, this is where most
media hangs out. You can p/u broadcast remotes in this area too.

Hope this helps!

John,

Try this site (http://newenglandracing.racewaymedia.com/freq/index.php3)
it looks like they have what you want.

Also, see below for some other frequencies I found.

Here are some frequencies:
151.6250 NEW HAMPSHIRE INTERNATIONAL SPEEDWAY

151.8050 CARA Enterprises Inc; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY
151.8950 CARA Enterprises Inc; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY

154.5700 CARA Enterprises Inc; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY
154.6000 CARA Enterprises Inc; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY

451.4750 WRIGHT COMMUNICATIONS INC; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY

456.4750 WRIGHT COMMUNICATIONS INC; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY

461.4875 LAO; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY

462.1750 WRIGHT COMMUNICATIONS INC; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY
464.3625 LAO; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY
464.9875 LAO; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY
466.4875 LAO; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY
467.1750 WRIGHT COMMUNICATIONS INC; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY
467.8625 LAO; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY
469.3625 LAO; NEW HAMPSHIRE INTERNATIONAL SPEEDWAY

Enjoy!

Allyn

2014. NEWBIE question

Yahoo group: pro94owners
Date: 2002-09-06 12:46:23 UTC
From: toddyparent
Topic: 2014 Message: 2014

When entering a frequency manually, do you need to store the frequency in order for it to take or press an additional button? I press the MAN button, then I enter the frequency (i.e. 119.100), but it doesn't seem to go to that frequency. I can still here the audio from the frequency I was on when I first pressed the MAN button. I do not see the little MHZ next to the frequency.

Thanks,

Todd

2015. Woodbridge, Virginia frequencies???

Yahoo group: pro94owners

You have to put the scanner in Program mode to enter a frequency. Press Program, press the channel where you want to store the frequency and press Program again. Enter the frequency and press the 'E' key. That should do it.

You need to press either up or down when you have finished entering the frequency. It will first search the frequency entered and then search in the direction you pushed. You can lock the frequency by pressing Hold after the search has begun. Unless your fingers are very quick, set the squelch to minumum, enter the frequency and press an arrow, press Hold, and then return the squelch to normal.

Well, shoot, Alvin! There's your problem! You live in Topeka! Now if you were in Wichita or Manhattan or someplace else.... :-o But seriously.... can you be more specific about where you're having problems? When you say "trunk codes" are you referring to talk group IDs? First, make sure that the radio is programmed for the Type 2 system. Press PROG then TRUNK, then press the number key of the desired bank where you have the system stored. Make sure that the display says E2-800 if the system you're scanning is an 800 mhz Type II system. If it doesn't, press the up-down arrow keys until it does, then press the E key to make sure that's locked in. Then, press the TRUNK button to exit the trunk mode, then press TRUNK again, then the bank number, then the SRC key to scan all the users on the system. If you already know the talk group IDs, it's easy to program them. Once you get the system scanning the trunk system, press the MAN key to enter the talk group scanning lists. You have 5 banks of 10 channels where you can store IDs. You have to enter both the bank number and the channel number to manually reach one of the channels, so if you're trying to enter an ID in bank 3, channel 5, press 3 and 5, then the MAN key, and you'll jump right to that location. Then, to store an ID there, press the PROG key, enter the ID, then hit the E key to lock it in. The ID should be a 5 digit number if this is an 800 mhz Type II system. If you hit the PROG key again, the radio will move to the next channel. Enter the next ID on your list, hit the E key to lock it in, and keep going through your list. When you're finished programming in your IDs, just press the SCAN key to start scanning your lists. The scan lists have to be active in order to scan them. You should see the bank numbers 1 thru 5 at the top of the display. If you don't, just press the number key of the bank to turn it on or off. For instance, if you entered IDs in banks 1 thru 4, but you don't want to listen to bank 2, just press the 2 key when you're in SCAN mode to turn off that bank, so that the display says "1 3 4" on the top.

Hope this helps!

Nah, the radio must be broken... put it back in the box, and send it immediately to me. I'll take care of disposing of it for you! ;-) But seriously, you need to program frequencies in the radio before it can do anything. First, open the manual and read it. Then, go to your favorite search engine and look for frequencies for your area. Then, take that list and start entering away. It's sorta like the old VCR's that you had to program the channels into it before you could start recording TV!

Good Luck!

2031. Pro-94A or Pro-95?

Yahoo group: pro94owners
Date: 2002-09-15 06:46:39 UTC
From: viamyid
Topic: 2031 Message: 2031

I just bought a Pro-94A and heard about the Pro-95. Now that I have 30 days to return the 94, does anyone have any advice on whether I should swap (or wait) for the 95 when it comes out (RS web site says it should be availabe in stores now).

I like the alpha tag feature of the 95 and the PC interface might be useful later. I don't like the 10 banks vs 20 banks on the 94A.

I'm completely new to this, but plan on learning fast and don't want to short-change my only piece of equipment.

Any advice?

Also, should I replace the antenna? I plan on using the scanner as a battery powerred handheld (not a base station nor plugged into a car) mostly in the aircraft frequencies

Thanks in advance!!.

Pro-94A on sail now for $169.99 at Radio Shack. I have a 94A and think it's great, although Alpha-tag would be nice. I believe there is a mod that can be done to receive milair for the '94. Even if you use it primarily for avaition scanning, you still have the capability to use it for just about everything else.

Title: Modifying your pro-94 to get military aircraft
Frequency: 230-406 MHz
Date: 09-Aug-2002
Category: Mods
Description: Open your scanner and take diode D382 and install a
jumper in its place, now take the collecter out of transistor 83.
install a 270 ohm resitor at the collector and solder it to the place
where the collector came out of. Put your radio back together and now
you have the military aircraft band.
Thanks To: Scanner Freak

I thought that the 94 could not be modified because of the programing of the chip? I did a mod to my BC 200XLT and it worked. I am a little leary of doing anything to my 94 though. Will it work for both the 94 and 94a?

Realistically speaking (no pun intended) you can't. Radio Shack keeps a tight lid on this type of information. They did this under pressure/agreement with the FCC so that the scanners cannot be modified pick up cellular telephone. Not a big deal to most people, until the scanner is in need of repair and Radio Shack is the only place able to do so. Their labor rates for out of warranty items are ridiculous.

They show a service manual for the Pro94a (part number 12214466 MANUAL
SERVICE 20-524) on their parts list. Does this not include a schematic? I
could be wrong (haven't tried to order one in years) but was thinking that
schematics were taboo on the older scanners that could be modified for
cellular, 2004,2005,06 and etc..

Sure, it's there, but try and order it. They will tell you it is available only to factory service centers (I've personally attempted to order one.) I have no idea if a schematic is included or not as I have never been able to obtain one. Strangely the manuals for older scanners that are easily modified to receive cellular are available to anyone. Have a look at:

http://www.radioshack.com/ProdSupport/DocumentDetail/DocumentDetailIndex.asp?URL=http://support.radioshack.com/support_electronics/2849.htm

for a semi-longwinded explanation.

Yeah, Al...

The primary difference between the -94 and -94A is that the -94A can simultaneously scan your conventional and trunking channels at the same time. The -94 can do one or the other, but not both at the same time. Otherwise, no difference.

Thanks, Glen. I guess I should have read past messages b4 posting
this.

I'm new to the group, but I've been scanning for years. I own three
2006s, a uniden bc100xlt, a Pro-91 and an old Channel Master
crystal-controlled scanner.

I'm going to return my Pro-94 because I like the upcoming Pro-95
better.

73s,
Al

2049. S-bit ???

Yahoo group: pro94owners
Date: 2002-09-19 16:20:19 UTC
From: John Hainsworth
Topic: 2049 Message: 2049

The manual for my Pro-94A indicates that I can turn off the "S-bit" (?) - The procedure for doing so does not work, so what am I missing? Also, do I need to be in trunk mode for this? (Maybe that's what I'm doing wrong, I can't remember). Thanks in advance.

2050. PRO-94 spontanously clearing programming

Yahoo group: pro94owners
Date: 2002-09-20 06:05:10 UTC
From: Larry Carter
Topic: 2050 Message: 2050

Has any one in the group experienced the 94 losing all programmed info (just like a 29 clear) while the radio still had good batteries?

This happened to me a few days ago. I believe I know what happened but I would like to verify it with those of you on the list who are more familiar with the radio.

I, like many of you, find the built in speakers audio quality to.... welll... There is no polite way to say it, it just plain sucks. Many of you on the list indicated that headphones provide decent audio, however the stupid jack is single channel mono. Ok, no problem, I just went out and bought a mono to stereo plug, no problem. This worked great, decent audio (for a change) with much better overall volume. So I'm listening away and decide to turn off the radio for a bit to do some other stuff, pull the plug cause I need the headphones somewhere else. Come back later, turn on the radio and, POOF, no more freq's!!! Now I had been told by an RS employee in one of my local stores that this radio is computer programmable via the headphone jack but that RS doesn't carry the software. I'm thinking that I pulled the headphone plug just as I was turning off the radio, something got shorted and it blew away the memory. Any takers on this theory?? Or does the 94 have another problem (beyond crappy audio and pain-in-the-ass programmability)?

Thanks for any info.
Larry

From: Den6N
Topic: 2051 Message: 2051

Re: memory lost, that sounds plausible to me - using the stereo plug may well indeed have done something seeing as how it accesses the programming function. I've used the $10 RS speaker that looks like a mike - works quite well. I even glued velcro to the side of the radio and to the speaker, and stick it right to the radio.

I had my Pro 94 decide it wasn't going to save any changes I made to any banks/freqs. I always used it in my van while I delivered papers, to know where the bad stuff was happening, to stay out of the way of searches, etc. Anyway, I brought it in one day to add EDACS freqs to a third bank, as another tower went online. I programmed the 8 new freqs in and started listening, all working as it should. I turned the scanner off to eat lunch, and when I went back and turned it on, the scanner was as it was before....the same configuration as before I entered all the new freqs, without the new freqs.

OK. I figured I did something wrong, so I entered all the freqs again. Once again all worked as it should. Turn it off, then on again, back to last config. I even tried resetting the scanner which you never do unless there's a major malfunction. The clear came up in the window, then walla.....back to you guessed it, last config.

I sent RS service pretty much this same story, and they said "retunr it and we'll fix it". So I bought a new on (94A) on sale. Works great and even like the lite that comes on with a transmission.

Anyway, maybe yours, like mine, has this wierd thing built into it that makes it stop working properly some how. Good luck with yours. I keep mine around for a spare base unit now.

This is a common problem with the Pro series of handheld scanners. Either the memory reverts to the original programming or it loses the memory altogether. This is a problem with the memory chip.

In addition to the text tags, the PRO-95 can be programmed with a computer..... and may go on sale shortly for a very nice price! :)

2061. PRO-94 Backlight

From: bangel03878
Topic: 2061 Message: 2061

I've looked around and haven't seen this posted on this group.
The Backlight will stay on if you:
1. Put the light on.
2. Press and hold the Keylock to engage.
3. Press and hold any other key, before the light goes off.
I'm sure someone could install a small switch instead of having to hold the key down. This would probably drain your batteries in a short time.

Topic: 2063 Message: 2063

Hello;

I have the Pro94 radio shack scanner, however I am having trouble picking up the OCSO. I have all the frequencies programmed in as the proper system, but when it finds the control channel (if it finds it) everything is recorded at a "private" and it just shows the dot on the top as talk but nothing will come up. Most of the time it just scans forever. Could it be my antenna, or my location (Universtiy and Alayafa, which is near the edge of the county. Any help

Thanks

I think your question is referring to direct frequency entry without entering into memory. What I do is program the desired freq. in the lower search limit. Hit prog., limit(src), punch in the desired freq., and enter. You will then be monitoring that freq. I am also a newbie, this trunking stuff is what confuses me. It is ten times harder to program this stuff than any ham radio xcver I have ever programmed. lol, Ed...

I just bought a Pro94(?), how do I tell if it is a 94
or 94a ? The salesman at RS didn't even know how to
turn it on (kept turning squelch knob). Until seeing
this group I didn't know there were 2 94's. Thanks.

2068. Pro-94 HELP HELP Thanx

Yahoo group: pro94owners
Date: 2002-09-27 12:29:26 UTC
From: ACE
Topic: 2068 Message: 2068

I am trying to program Charles County Emergency and I dont know what type of system they have: motorola I or II or EDACS, is there any way that I can find this out. I have the frequencies as follows:
158.7750 Charles County Fire
155.0850 Charles County Fire
155.5350 Charles County Police ch.1
155.6100 Charles County Police ch.2
155.6400 Charles County Police ch.3
155.6700 Charles County Police ch.4
039.0600 Maryland State Police (Barrack-H Waldorf
How would I go about programming the pro-94 with these frequencies for trunking?? Thanks in advance. Also, if I get an error what do I do?? How do I do a search to find the frequencies if these produce errors. The manual is not clear and I have read it over and over.
Thanx in advance,
ACE

Got this from a Google search:

http://www.fordyce.org/scanning/frequencies/Maryland/charles.html

Seems to have what you need. As far as I know 155's, etc. are not trunking freqs. They're straight forward scanning.

2073. PRO-94 Backlight on early model

Yahoo group: pro94owners
Date: 2002-09-29 14:31:17 UTC
From: Jim Foust
Topic: 2061 Message: 2073

Hi all. . .

I just bought a used Pro-94 that has a very early ROM. It seems it doesn't have the auto backlight feature in it. . . when I hold down the backlight key while turning the unit on nothing happens.

Any gurus know a way to make auto backlight work on this unit?

Thanks!

Jim

This is Jim B. in New Port Richey, Fl. I have a Pro
94 and it doesn't have an auto back light. The only
one that does is the Bare cat model. I don't know if
the new Pro 94 has it or not. Try going to google.com
and do a search on it. It would be nice to have an
auto back light. Good luck, Jim.

The A version does have it. Press and hold the backlight button while turning on the unit, the light will come on and the display will say Autolit on. Do the same again to toggle it off.

That is the normal delay for the backlight to turn off in autolight mode.
Simply press any key (I use either up or down keys) while the light is on
and it extends the backlight for another 20 or so seconds.

As am I. I've seen this mod before, with many people who claim it worked on their brother's friend's cousin's Pro-94, but never anyone who claims they have done it themselves. I'm not exactly rich and am not willing to fry my Pro-94 on an unproven theory. Has ANYONE on this list actually attempted this, know someone who has (and has seen the results!!), or can verify that it will work without negative repercussions?

Or wait 15 years until my Pro-94 is completely obsolete. If it's still working I'll let you all know how the mod works out...

Assuming, from reading the rest of the description, that he means 'lift the collector' from the rest of the circuit and connect the resistor in series.

I take it that you disconnect the the collector from the pcb and insert this resistor between it and its soldering pad, but this is all surface mount components! And I suppose that D382 and this T83 are under the shield that has two of its screws potted? There are like five total componets that are even labeled. and does anyone believe there would even be a service manual? Sorry just hate seeing that "mod" pop up again and again.

Another small problem. The parts list doesn't show a transistor 83, Q031 is
the highest numerical transistor ID shown.
Think I would put the soldering iron back in it's case. <grin>

The 94 does not have the capability to be programmed via computer. There isn't really even an on board port to do so. It would be nice if it could though.

Miklos,

If you'll search through the archives to about 6months ago, there was a lot of discussion about this. There is at least one post that lists exactly how to do it. I don't know if anyone has actually tried it yet though.

Hope this helps.

2107. Discriminator - some info

Yahoo group: pro94owners
Date: 2002-10-11 14:49:13 UTC
From: miklos_tomka
Topic: 2107 Message: 2107

This is what I have found:

Discriminator (base band audio) is at
pin 9 of IC-2 MC3361CDR2.

I have read the various posts on this board re. discriminator, but I
have seen no reference to this location...

I do not have my PRO94 yet - but as soon as I get it, I will check
this information.

Miklos

PS: My previous post appears twice with the same text. Why is that?
I posted only once???

Must be a Yahoo thing. I've seen this happen before. I've also seen posts
take 24 or more hours to show up. I have also noticed people discussing a
post that I have never received. Guess these problems could also be caused by
the individuals server. RM~

2112. Pro-94 Discriminator

Yahoo group: pro94owners
Date: 2002-10-15 01:45:14 UTC
From: Mark
Topic: 2112 Message: 2112

I have recently finished my data slicer, with a D.O. (Discriminator Output) from my Pro-94 (not the 94a--I don't know if there are any differences). I used a pin that connects the two logic boards in the scanner (it is behind the picture in the following website). I have a website with some pictures that could possibly help. The address is http://webpages.acs.ttu.edu/mmatalik/Radio/index.htm . I'm sure you can figure out how to take the scanner apart and everything, so I don't have those instructions on there. Don't have your soldering gun too hot when you are doing this. And of course, I will not be held responsible for anyone that messes up their perfectly fine, working scanner. Don't do anything that you aren't comfortable with.

I used a really small phono jack for the output. I used the center pin as (+), and grounded it at the pins shown in the picture on that website. I just got it working this weekend (the data slicer took the longest to get around to making), and it works on both Motorola Type II (haven't tryied a Type I, but I'm sure it'll work), and a GE EDACS. I'm using (e)trunker v 3.8.3, and am using just a general data slicer that can be found on many other webpages. Have fun.

From: miklos_tomka
Topic: 2115 Message: 2115

I have built a data slicer - and it works quite well on my AR8200.

Now I would like to put a discriminator connector on the Pro-94, so that I can control the AR8200.

I took the 4 screws out from the back of the Pro-94 - but there is something else. What else is holding the case together?

Thanks for any help in this,

Miklos

From: miklos_tomka
Topic: 2117 Message: 2117

Instead of disassembling the Pro94 I will try to use my AR8200 with a second radio to do trunking.

So I would like to sell my Pro94.

The price is CAN $250 - and it includes the Haruteq Scanner Book (frequencies for Ontario), a monitoring headphone and a CD with a collections of radio software.

Please email me at miklos_tomka@... if interested.

Thanks,

Miklos

Schematics and technical information for Radio Shack products are available in the Service Manuals. You should be able to obtain a PRO-94 (Cat# 20-524A) service manual from Radio Shack National Parts by ordering part number 12214466, $1.99 + shipping/tax.

You can place an order by phone through the Radio Shack Order Center at 1-800-843-7422. You can also contact the Order Center for assistance concerning other scanner service manuals.

You can also place the order through your local Radio Shack store, with payment in-store and delivery to your address.

This has been posted to the group several times, but to my knowledge, no one has actually tried it. One chap did say he checked the service manual and this info appears to be bogus, but it doesn't hurt to have confirmation. Here it is:

Title: Modifying your pro-94 to get military aircraft
Frequency: 230-406 MHz
Date: 09-Aug-2002
Category: Mods
Description: Open your scanner and take diode D382 and install a jumper in its place, now take the collecter out of transistor 83. install a 270 ohm resitor at the collector and solder it to the place where the collector came out of. Put your radio back together and now you have the military aircraft band.
Thanks To: Scanner Freak

Well, it's bogus because first of all there is no such thing as D382
nor is there a Transistor 83..... Oh well, so much for that.

2126. Pro-94 Service Manual

Yahoo group: pro94owners
Date: 2002-11-09 16:14:48 UTC
From: Pete Crapia
Topic: 2126 Message: 2126

I have posted a mid quality version of the Service Manual for the Pro-94 at the following link below. The moderator of this discussion board may want to download it and post it permanently in the files section. Do note that it is a 10 meg file but the board has 20 meg to spare. I think it would be worthy post if possible. I think Yahoo has a limit with uploads on a per file basis. If this is the case then I will keep it at that URL until I need to make room for other temporary files.

So for those of you who know your electronics you may want to download it before it's gone one day and is not on the discussion board due to file size limitations.

Now lets get hackin!!

Pete

From: lizcat12
Topic: 2128 Message: 2128

Check out this link for a picture of a clear plastic holder I found in my nearby Big Box Office Supply Store in the desk top accessory section. I added a small piece of felt cushion to the bottom of the holder on the inside front to make my PRO-95 tilt back a little more. They also have a low profile version that is used to hold computer discs that work great too. The front side even has a convenient cut out for access to the keys. $2.99 + tax

From: David Delmonico
Topic: 2127 Message: 2131

This was the original mod posted for getting the backlight to remain on. I don't know if it is for 94 or 94A or if it even matters, but here it is again:

The Backlight will stay on if you:
1. Put the light on.
2. Press and hold the Keylock to engage.
3. Press and hold any other key, before the light goes off.
I'm sure someone could install a small switch instead of having to hold the key down. This would probably drain your batteries in a short time.

Yahoo group: pro94owners
Date: 2002-11-26 09:24:00 UTC
From: Pete Crapia
Topic: 2133 Message: 2134

The 94 doesn't support programming through the headphone jack. Other models support it such as the Pro-89, and with the 89 you can also program it over-the-air which is a feature I've never seen in any basic radio scanner.

The 94 did have the ability for computer programming since it has the same exact MCU as the Pro-2052 but Uniden decided not to give it to us and even put a resin on top of the pins to keep us out....

No big deal I guess, we still have a way around that, the 24LC64 :)

Topic: 2150 Message: 2150

>This might be a stupid question but does the Pro 94a have beep alert
>on user-selected channels/talkgroups?

No. It also does not have:

1. A clock
2. Channel count (during search)
3. Tape recorder control for induhvidual channels
4. Tape recorder output
5. a number of other things I can't think of right not

Please note that these idears came from the Bearcat 250, which I used some
25 years ago and which none of the scanner manufacturers have found
necessary to put in and which would cost the price of a 555 timer to
install.

2151. dissapointed customer

Yahoo group: pro94owners
Date: 2002-12-14 05:26:59 UTC
From: TTPrescott
Topic: 2151 Message: 2151

I've owned my pro-94 for about 3 yrs. now and recently tried to get RS to either "swap", "exchange" or any other like term my "old" 94 to a 94a, with no luck. I tried using my extended warranty and tried calling the service ctr. that would handle a firmware upgrade but all to no avail.

I guess the key is to wait until you think a company has made all of the upgrades that they are going to make THEN purchase an item. If, by chance, one happens to buy early in a product's lifecycle and "upgrades" are made than one is without the "better" unit, although they may have the same or similar part numbers!

I'd like to publicly thank Dave D. who frequently posts here for his help as well. He provided his phone number at work (RS) and I took him up on his offer. He was not able to push it through either. In the end, I guess I was the crazy one to think that MY 94 should work like the 94's sitting on a shelf in a store ready for sale today!!!

Looking for any ideas or angles if someone has accomplished getting RS to help them with the upgrade. Thanks.

Glen

Easy. Here's how you do it:

1) List your 94 on eBay and sell it.

2) Use the proceeds to help finance purchasing a new 94 (or 95).

I all seriousness, RS is just not geared to handle that type of
service. That's not how the organization is structured. You might as
well ask Microsoft to put out good software while you are at it...

2155. Question about programming a Pro-94

Yahoo group: pro94owners
Date: 2002-12-17 05:40:46 UTC
From: JR
Topic: 2155 Message: 2155

I bought my wife's father a Pro-94(A) for xmas. I am trying to program it for
him and ran into a glitch. I can program the freqs just fine but am having a problem programming the Talkgroup IDs, clarification follows.

I live in St. Mary's County MD (where I am trying to program at) and want to program his scanner for Calvert (1 county away)and Anne Arundel (2 counties away)
. The scanner takesCalvert's talkgroups just fine but will not take Anne Arundels. I noticed in
the owners manual you have to let the scanner begin trunking before you proceed to program the User IDs. If I am understanding this correctly, I have to be able to hit the "control channel" to let the scanner begin trunking. I am thinking that I can not program the USER ID's until the scanner is trunking and I won't be able to get it to trunk without being able to receive the control channel, which appears to be my case.

My question is, my understanding above correct? I assume if it is I will have to take me a little drive just to be able to program this rig.

Hi J.R.,
Well, you got the right idea, but the solution is simpler than taking a ride, (unless you want to). Program in the Control Channel that you can hear into the bank that you want to program, Then it'll start "trunking", even though you won't hear any conversations. When you get the Talkgroup Id's that you want entered, then remove the Frequency for the CC that you put in originally.
Now in order to test it, you may have to take a drive then.

2157. RS 20-032 Mag mount mod?

Yahoo group: pro94owners
Date: 2002-12-18 08:22:11 UTC
From: Doug
Topic: 2157 Message: 2157

A while back on one of the scanner lists I subscribe to, somebody has posted a modification for the RS 20-032 that involved trimming each section to optimize reception...I do remember the article saying it improved reception across the PS bands, but made it useless to transmit on 2 meters and 440.... What list it was I cant remeber.
I know i printed it out, but as you have guessed, I dont remember where the hell I put it!....Has anybody seen this mod on a site, or maybe has that post kicking around?
I was just given one of these antennas and would like to play with it on a second vehicle to see the results.
TIA

Doug

Doug,

I did a variation of the mod to the current RS mag mount. I cut the top element for 118-138 MHz and the center element for 225-400MHz. Great improvement on receiving in these ranges now.

I was listening to my scanner monitering two type II systems when i picked up my 94 i noticed 000-1 as an id not 304 or 2480 for example, i was still hearing the all the different talkgroups but under 1 id 000-1. I reprogramed the system as a E2-800 didn't reprogram the freqs or anything else just what type of system it should be, and it work it was showing type II id's again. does anyone know why my 94 all of a sudden thought it was monitering type 1 systems?

Topic: 2166 Message: 2166

Just got a Pro-94. I've programmed in all of the local PD & FD frequencies for Brevard County, FL. When going to the next step (for trunking), the talk group ID's flash on and off very quickly. How do I program in these ID's when they are going that quickly on and off? I also have a separate print out from John Gerstner's webpage which lists all of the ID's for the county. However, when the Pro-94 is in the trunking mode there are no conversations heard. The manual doesn't address this fact. Any help from anyone would be graciously accepted.

Thank You,
John Perkins
Indian Harbour Beach, FL

I don't know what causes it, but my Bearcat 245 sometimes does this. I found that by programming the system as both type I and type II and see what picks up more of the systems traffic, and program using that type. (this works much better if you have two trunk-tracker scanners)

From: David Delmonico
Topic: 2168 Message: 2168

Scanners -

Slightly off topic here, but thought I'd post anyway. Think back...remember the Uniden 50XL...old 10 channel mobile unit. I have one that is dead. I tinkered with it and probably made it worse. If interested in it and willing to cover shipping costs, it's yours.

Please reply directly to me (delmonico@...) if interested.

2169. scanner programming help

Yahoo group: pro94owners
Date: 2003-01-03 15:02:25 UTC
From: Derek Scalese <fireman_27_98@yahoo.com>
Topic: 2169 Message: 2169

Hi guys I'm new to this forum but I thought i would try to see if ANYONe can help me program this pro94. (starting to think I need an engineering degree to do it) My problem is when I program my trunked feq's and i go to hit (src) to find the data channel.. it doesn't do anything. I'm using type 11 and I have all my 800 freq's programmed correctly but I can't figure out how to get the scanner to accept the talkgroup ID's. My question is do I need to hit anyother buttons after I program the 800 freq's and before I hit the (src) button to try to find the dta channel? Also does anyone know what (Type 11i) is? Is that a hybrid? E2-900? E2-hi?
Thanks for any help you guys could give me.. sorry for the length of the message.
The new guy

I believe you have to hit scan first and then src. I haven't used my Pro-94 in a long time but I'm pretty sure that is the procedure.

Obtain frequency listings at a Radio Shack store before going. Or, try any of the agencies in the area where you will be going. Many list their frequencies.

Or, play with a search engine like Google and see if it brings up anything of interest

Good luck... Have a safe trip... And if you are not familiar with how they drive in Los Angeles, leave the driving to someone who is.

Dave

2177. Question on Pro-94 Trunking

Yahoo group: pro94owners
Date: 2003-01-10 03:23:49 UTC
From: RDS <ub355@yahoo.com>
Topic: 2177 Message: 2177

Was helping a friend set his up, I have a Pro-93

We found something I wish to verify

I first set a up a vhf channel, 94 scanned fine

I then set up a Trunked channel 800 mhz frequencies, 94 scanned fine
both trunked and non trunked channel.

I then set up a Trunked channel with TG IDs, the 94 seemed to go to a
different ID Scan mode and would not scan the channel I had set up
with just the Trunked System 800 mhz Frequencies.

Is this the way the 94 behaves ?

Also is there a way to shut off the hyperscan feature ?

From: Crystal Star <christinaf1971@yahoo.com>
Topic: 2182 Message: 2182

Greetings,

I recently inherited my father's PRO-94. Unfortunately, I did not inherit the manual. When I did a Google search for the PRO-94 I was glad that this group came up and thus I have downloaded the manual. I have to get my printer up and running so I can print it out.

Currently I am using his pre-programmed local frequencies(which will do for me), but while browsing the archives I saw a few posts about cordless phones, etc. I don't know what the laws in IL/WI are about monitoring them on scanners. As far as I know all phone's manuals do state they are not 100% secure. In fact, once I even heard my neighbor's phone conversation on my cordless phone. LOL.

Anyway, I thought I would try to introduce myself. 32/F/living on the IL/WI border. I've never had my own scanner, but loved to sit and listen with my father at times.

Anyway, I'll be lurking until I read my manual. :-)

Chris

Yes. Sorry for the description of it. You have to initially program the radio by hand and then save the EEPROMs contents to a file with a computer, then reload the file when you want a new set of freqs. But it sure saves me "hours" of re-programming.

I thought of writting a program that will give a nice interface which transparently writes the file as a hex file for loading into the EEPROM. To use a hex editor alone would be hell and is why you are best to initially use the keypad for programming it.

I probably won't write the program though... Too lazy to be honest. The way I do it suits me just fine. If I was able to control trunking and other such functions in real-time then writting a program would be worth it. But this mod is only for reloading frequencies so there is no good reason to waste time writting a program to do that.

From: Jay McAlear
Topic: 2193 Message: 2200

I wish I could write that kind of program! There's another Yahoo group dedicated to programmable remote controls (One For All variety and others) that have these factory interfaces built in.

Some geniuses in that group were able to figure out how to download the remotes information and have since been able to create custom codes for various devices the remotes weren't originally designed to do. Some guy wrote a program which is similar to what you mention, you put in the text etc. and you then get the hex codes that you can upload to the eeprom.

I stumbled on to that group just be searching for codes for my DVD or something with Google, so I'm not actually an expert on the techniques. With over 8,000 members they've probably got a few more brains working on this stuff (and people are pretty serious about their entertainment systems!). If I were a bit more adept I'd be inclined to create such a program for the pro-94. You'd be able to cut and paste your frequencies from web pages and within minutes have hundreds of channels programmed. If I could only sell my 94 for enough change to pick up a 95 and not have to worry about such things!

Jay

Subject: [pro94owners] Re: Computer programming??

Yes. Sorry for the description of it. You have to initially program the radio by hand and then save the EEPROMs contents to a file with a computer, then reload the file when you want a new set of freqs. But it sure saves me "hours" of re-programming.

I thought of writting a program that will give a nice interface which transparently writes the file as a hex file for loading into the EEPROM. To use a hex editor alone would be hell and is why you are best to initially use the keypad for programming it.

I probably won't write the program though... Too lazy to be honest. The way I do it suits me just fine. If I was able to control trunking and other such functions in real-time then writting a program would be worth it. But this mod is only for reloading frequencies so there is no good reason to waste time writting a program to do that.

On my Pro-70 when you enter a frequency that already resides on another channel, it would say "duplicate" and flash the other channel #... it seems on the 94 it doesn't care how many times you enter a frequency, is this the case?

Yes. I find it a rather handy feature when scanning conventional
channels. Freqs of greater interest can be programmed in more than
once, giving a sort of 'scalable priority' depending on how many times
and in how many banks you enter them.

It is handy when you want a high priority on a particular freq. All the scanners that I have ever owned would allow you to program in duplicate freq's. Wonder if maybe the Pro-70 instruction manual doesn't tell you how to defeat this anti-duplicate feature. RM~~

That is correct. I wish it did not so as to save duplicate freqs. I
have another scanner that we detect duplicates but will allow a duplicate
freq if one really wants it. Oh, well the darn Pro 94 has a 1,000
channels.

hey yall a couiple of quick questions any help would be appreciated. i bought a pro-94 scanner about a year ago and still cant fiqure out what i am doing wrong in some situations. Basically i think it might be some sort of interference problem. This week I went to the mardi gras parade in shreveport la. I live 2 miles from the route at home the scanner is buzzing. Then i get to the main area lots of cops ambulances med people etc its justscans. I notice later when i get away from there a little ways i start picking up again is there anything i can do. if not when i upgrade is the handheld scanner that wouldnt have this problem. I notice it scanning without picking up anything even at my house ssometimes is it interference? also any military freq for barksdale airfoce base in shreveport louisiana would be helpful thanks in advance

Sounds like the scanner front end is getting overloaded. Are you using
the stock rubber duck, or did you upgrade to a better antenna? Next
time, try a less sensitive antenna, or no antenna at all, see if that helps.

Jim,
A quick look at www.trunkedradio.net/ reveals that you were probably trying to monitor the Caddo Parrish TRS, which is a type II Motorola system. I had the same problem with my Pro94 in Chattanooga/Hamilton Co., TN, which likewise uses a Type II Motorola system. It's those darned cell towers! Try scanning your bank that you've programmed the system into in the conventional mode. I know the Pro94 will let you do this, but I'm not sure about the Pro94A. I think you'll find readily recognizable cellular interference on some, if not all, of the channels. It doesn't take much intereference on the control channel to prevent the Pro94 from locking onto it. Only solution I know is to scan the band in the conventional mode, locking out the control channel and any other frequencies where the interference is severe enough to open the squelch. If you try this approach, don't forget that the frequency of the control channel will probably change every 24 hours. Good luck.

From: swordboy76
Topic: 2213 Message: 2213

Or is it overkill? I'm travelling across the country in a high speed rally in April and need some police tracking tools. I know VERY little about scanners and I'm not sure about the whole "trunking" thing but I can learn to program the device if needed - should I get a Pro94 or is there something else better suited for what I need?

Thanks for your time.

No police monitoring will guarantee that you won't get a ticket. Smokies
don't sit and chatter while on traffic watch and besides, you would have to
hunt another frequency just about every time you crossed a county line or
city limits. You would get more "smokie" info from a CB radio or a "Bird-dog"
(radar detector), but nothing is fool proof.
All said, the extra 10-15 mph that you pick up isn't worth the risk.

RM~~ (retired trucker, one who knows)

It is overkill, won't be very useful at all, and
illegal in many states. Listening to truckers on a CB
radio can be very effective, as occasionally they call
out the mile markers of all the cops they have seen.
Get a cheap CB from radio shack, and monitor channel
19.

Obviously, the easiest way to avoid a speeding ticket
is to not excessively speed. If you are planning what
I think you are planning, keep in mind, depending on
the locality, speeding 20-30 over is reckless driving,
and your car can be impounded and you can get locked
up.

Hi Mike, I ran across a modification on www.mods.dk web site and it calls for replacing the existing 36mm speaker with a smaller 29mm Radio Shack #272-0092 8 ohm mini speaker. I did the mod and it did change the audio frequency response from the high pitch sound to a more vocal range, but the white noise that the audio amplifier exhibits is still ther but not as bad. Try it and see what you think. I'm still trying to find a speaker that will fit and sound good...

2219. antenna needed

Yahoo group: pro94owners
Date: 2003-03-09 14:23:23 UTC
From: John&Michelle
Topic: 2219 Message: 2219

Hi everyone,
I currently have a pro94 and would like to upgrade the antenna I am trying to get some frequencies that are about 30 miles away or so, but I think I am just barely out of thier reach. I live in an apt. so I can't buy one of those outdoor antennaes that go on the roof. I saw that radio shack sells a deluxe antenna for handheld scanners. Would this be enough to pick up those signals about 30 miles away or am I going to need something a little better. The reason I am asking is that I have a friend who works at a police dept which is about 30 miles away. She can pick up the broadcasts at my apt on her handheld portable radio, so I am hoping that by upgrading my antenna I would also be able to pick up the broadcasts. Thanks in advance for any advice!

Any good gain antenna with a BNC connector should help your reception. Get a copy of Monitoring Times and check out some of the ads in there for good antenna suppliers. You may also want to check with an amateur radio store, such as AES or HRO, and see what they may be able to do for you. Regarding the signals you're trying to receive, what frequency band are they in? VHF or UHF? Or 800mhz? It seems to me that 30 miles is a relatively short distance for radio waves and you should not have such poor reception. UNLESS, the transmissions are on the 800mhz band.

If you are referring to the center loaded telescoping antenna that RS has,
the only improvement that I have noticed on my scanners which include a
Pro-94 is on the low freq's (30-50).

She can pick up the broadcasts at my apt on her handheld portable radio
##

Not saying that another off the shelf antenna won't work/help but hers is
probably cut for the exact frequency and being used on a radio designed for
an exact frequency. The only way to really know is to get the other one, take
it home and try it. RS has or did have a money back warranty on things. RM~

Hi, thanks for the quick response. It is part of a trunked system in the 800 mhz range, using GE/Ericcson EDACS trunked radio system. They have an east and west system with about 8 towers located throughout the county. (it is the county directly east of me over tampa bay) I am in pinellas county trying to get the Hillsbourough county freqs. this link might show it better:

http://www.timhobson.com/scanner.html

I'll go try RS and see if they will let me return that antenna if I cant pick anything different up. Or perhaps they will just let me bring in the scanner and try it there.

It would depend on what type of signal they are and
how much power they're putting out. When Ft. Wayne was
on VHF, I could hear them clear as day with the stock
antenna in the middle of a foundry about 30 or more
miles away...

UHF is a little less, except under certain conditions.
Last summer I heard Chicago PD about 150 miles away...

800 MHz is probably not something you'll get much of.
I can't pick up Ft. Wayne's new Digital control
channel or the old analog Allen County system at all
from the same the same 30 or so miles.

It all depends, really...

2225. Lapel Speaker for Pro 94

Yahoo group: pro94owners
Date: 2003-03-10 02:04:04 UTC
From: Chuck W. Brown
Topic: 2225 Message: 2225

I followed the advice here and bought the small Rat Shack lapel clip speaker, $9.99. What a difference. Looking at the speaker itself thru the housing, it appears smaller than the 94's speaker, yet way outperforms it. Anyway, the audio is acceptable now, especially in the truck.

They sell another speaker (a bit larger) for $14.99. It was too big for the truck.

Thanks for the advice. I recommend this to anyone.

Chuck

If you're on the road try a portable CD player cassette adaptor for your stereo (if you have cassette that is). It's a thing that looks like a cassette tape with a cord coming out of it with a mini plug on the end. I don't know how much they cost on their own but my CD walkman came with one and the whole thing cost $45. I think I've seen them go for between $10-15 at various times but don't quote me on that. They're meant for stereo but when plugged in to the scanner all sound comes out of the left channel of the cars speakers (which is about right where I'm at). Needless to say it's plenty loud.

I have created a page which will display the JPEG for you. The zip file isn't corrupted so I'm not sure why anyone is having a problem. But this page should help solve that problem.

Everyone can open JPEGs, even Macs. On the Mac, you
have SEVERAL options. IE, Netscape, Safari, Preview,
GraphicConverter. Preview should work out fine.

Unless you're on OS 9 or below, then you'll use
QuickTime, Netscape, or IE...

Don't know what he understands but I have opened lots of zip files using
Winzip. I unzipped this one then tried to open the jpeg and it would not open
for me.
I wasn't really interested in the file but was curious as to why it wouldn't
open for him.

Run a ZIPfile integrity test. Try changing the extension from jpeg to
jpg (viewer limitation?). Save the image as a file rather than viewing
it from within WinZIP.

BTHOM. I don't do Windows much for real work.

Ok, one more question....then I promise to be quiet for a while!

How do you wipe out the programmed frequencies? Can you wipe the whole thing out and start over?

I have read the manual...just can't seem to find it.

Thanks!

CB

2238. Earphone Jack going defective?

Yahoo group: pro94owners
Date: 2003-03-12 00:14:16 UTC
From: islesfan95
Topic: 2238 Message: 2238

I've had my Pro-94 since the summer and I'm loving it. However since about a month ago, the earphone jack has gotten to a point where my mono to stereo headphone adaptor has to be "held" in a certain position in order to hear anything. I have to make sure its fully in the jack, and then push on it down such that its at an angle with the top of the scanner. I'm wondering has anyone in this group experienced this before and what did you do to correct it(I'm assuming replacing the jack is an answer, but i'd have to have a friend do it since i'm not good with electronics). I had placed a wedge to keep the jack in one position, but it did not help.

Classic symptom of a cracked solder joint. I've seen it a lot in 'walkman' type radios. The circuit boards are machine-soldered and often have a very thin coat of solder around the jack terminals. Over time, stress fractures occur in the solder resulting intermittent operation and eventual complete failure of the joint. The solution is to re-solder the joints on the circuit board, adding a bit of extra solder to give the joint more strength. This should only be done by someone who is experienced with *electronics* soldering, otherwise you could end up with a boogered-up mess.

The stereo adapter adds even more stress on the jack. I would either dedicate a set of 'phones to the scanner with the stereo plug whacked off and a mono plug soldered in it's place, or make up and extension cable that does the mono-to-stereo conversion.

I, too, had this problem...it was within my 3 Years,
so it was still under my service agreement. They
replaced the jack and within two months it was doing
it again. I just gave up on that junk jack. I quit
using it altogether.

Anyway, yes you will have to replace the jack...

> I like them for radios that make static

For what they are, they work pretty good. I got the 1st one while RS still
had them on the shelf for $89.00 (they are not worth that) then I picked up 2
more from a fellow who had bought a bunch from RS when they discontinued them
for $20.00 ea. (they are worth that).
I wouldn't recommend paying more than 30.00-35.00 for one. Even with the DSP
feature disengaged they make a great little 5 watt amp and drive a small
speaker pretty well. I use RS cast aluminum Minimus 7's with them and they
sound great. RM~

Jason,
I live up in the Ft. Hood area but my work takes me to S.A two or three times a month so I try to keep abreast of the systems between S.A. and Ft. Hood. From what I've been reading, San Antonio is changing over to the Ericcson EDACS Digital system very soon. From what I understand it's already installed and going through the testing phase. If this is the case, you're goning to loose your monitoring capabilities in that area as soon as the system goes online. I know the new Uniden digital scanners will decode the APCO-25 systems, but I'm really not sure if they'll get the Erricson Digital provoice system. If you want to keep up with it try going to www.trunkedradio.net, that's where I've gotten my imformation on the subject. Hope I've been helpful,
Tramagod

If you have a cassett player in your car you can buy a cassett adapter and plug it into your earphone jack with an adapter because it is sterio and the scanner is mono and you can use your four speakers in the vehicle and turn the volume down on the scanner and use the radio volume and it sounds really good. If you don't use the small adapter it will only come out of one side of the vehicle

That's exactly what I told a friend of mine who bought one and then took it back. It's not a $300 DSP, and it doesn't perform like a $300 DSP. It performs more like an $80 DSP. If you read the docs, it does exactly what it's advertised to do, nothing more.

>I wouldn't recommend paying more than 30.00-35.00 for one. Even with the DSP
>feature disengaged they make a great little 5 watt amp and drive a small

I bought my first one on close-out for half price. The second one was a 'manager's special' for $20, and the third was $15 at a ham flea market. Personally, I won't go more than $20 for a used one without cables, etc. I used one with my Drake TR7 for Mode A satellite work, it did a nice job of removing hiss from the TR7 audio with the volume cranked on 10 meters for the weak ones. The auto-notch is handy too. The headphone output is sort of wimpy though, I never did get that fully traced out. Headphones are mandatory with full-duplex satellite work. Oh well, all the Mode A birds are dead now. Sigh... Also used a DSP40 on my DX400 at the computer shop to filter out some of the computer noise from AM talk radio.

I used to use Minimus-type speakers for communications gear, but found after a time that they are actually not a good thing. The extra response above 3 KHz is actually detrimental in communications applications. One of the best sounding communications speakers I have used is my Drake MS4. Picked up a little Pace CB external speaker that sounds darn nice in the car on my HR2510. Would still like to pick up a couple of more DSP40's some time. In my plans sometime is to see if I can add some sort of input ALC, having to ride the input volume can be kind of a pain (although not so bad with the Drakes' excellent AGC).

That would be stretching it. ;)

I saw a deal in the July/02 issue of QST in the Hints and Kinks section that sort of caught my eye. The author says it's for "those itty bitty speakers typical of modern radios," does that sound familiar? It's a simple equalizer to use with communication receivers and is built around a LM324. Haven't got around to building it yet (maybe next fall) but I did order two circuit boards from Far Circuits to make a couple of them. The url to the Far web page is /www.farcircuits.net/audio1.htm and the name of the project is "Improved Audio Equalizer by WB9YBM". RM~

Sounds interesting, but too much work. Lessee, I would need to squeeze
that in somewhere between building the new shack, raising antannae,
wiring up a HamHud II, refurbing the R390A, 'Sherwood-ing' the R4C, ...
etc. Years ago I used an el-cheapo car stereo eq/amp. One of those
things that claims 300 watts output but really puts out 12 watts RMS.
Ran one radio to each channel. Minimus speakers (before I knew
better... :-)). A bit of overkill, and the bands aren't spaced close
together enough between 300-3000 Hz for serious commo work, but it did
the job. Someday I'll find another one at a garage sale.

From: Den6N
Topic: 2255 Message: 2255

March 23, 2003

I've received two apparently bogus e-mails with attachments, claiming to be from Microsoft, which state that the attachments are patches to correct security vulnerabilities.

To my knowledge, MS <may> send notices advising of security vulnerability issues with the suggestion that you go to their website for information and patches, but they never send attachments claiming to be those patches.

The first came shortly after midnight March 23, from the "Microsoft Internet Security Center", with an attachment titled "Q379784.exe", while the second came about 6AM the 23rd, from "Microsoft Public Support", with attachments titled "update_exe.dat" and "antyvirinfo.txt" (note bad spelling on 2nd item). These are obviously bogus and should not be opened...

Odd, I did a few Google searches and found lots of frequencies throughout Ireland. It doesn't look like it is legal to post police frequencies though. Having said that I did see a few frequencies for the gardai (don't know if that's regular law enforcement or not. As to the unlocking question... we've been down that road before.

Have you any paperwork or anything on what you had in there? Ya gotta keep
a record of all those frequencies once you've entered them. Did you program in
what was in there originally, or was it done by someone else?

That said, where are you located? We can provide frequencies & URL's to lists
you can refer to to rebuild your database of information...

I just got a pro 94 and cant figure out how to power it. (i sound stupid heh) I have rechargeable batteries and an universal AC wall adapter (non-rs) with a tip that looks like the radio shack "h" tip but not sure. (the switch is on rechargeable "ni-cad") So I went out and got an "h" tip for my universal DC adapter (cig. plug car) and still didnt work. All of the switches are set to the right polarity and 9v. I will go out and get a rs adapter if I have to. Can anyone help me?!?!?!?

2272. Batteries AC/DC power???

Yahoo group: pro94owners
Date: 2003-04-24 12:51:01 UTC
From: mattenloe
Topic: 2270 Message: 2272

New batteries work, and the back of the scanner by the power jack says 9v. But if 6v will work that is ok.

2273. RE: [pro94owners] Batteries AC/DC power???

Yahoo group: pro94owners

From: Mike Toennessen
Topic: 2270 Message: 2273

Hello all,First time responder to this group but have had a pro-94 since its birth. I use regular nicad battaries in my scanner. I keep them there all the time allowing the scanner to keep the battries full. I also will use nimh batt. I once made the mistake of putting rechargable alkalines in the scanner which resulted in 2 of them to leak and a couple of hours to clean out all the acid. (the scanner only charges Nicad and Nimh) Any plug-in adaptor will work for the AC connection but just make sure that your tip is - not +. Also make sure your voltage does not exceede 9v and the specified amps. I have had this scanner for many years and this was my first trunker. For me it meets all of my needs and then some. Everyone I have talked to says this is the best trunker on the market even passing the famous pro-92!!!Mike

6 volts may power the radio, but will not effectively charge the batteries. You need 9 volts (nominal) for battery charging. I've run mine from 12 volts, but this produces extra internal heating that may be detrimental to the lifespan of the scanner. Currently, I use a surplus laptop computer power brick modified with an added down-regulator to provide 9 volts at up to 1.5A. Why the overkill? Because the parts were free. :-) Make sure any adapter you use is polarized correctly and capable of providing current equal to or slightly greater than the scanner's spec requires. Beware of adapters that have a signifigantly higher current rating unless you know that they use electronic regulation; unregulated adapters can put out excessive voltage when lightly loaded.

Regarding batteries, NiCD is best. NiMH can be used, but charging is not optimal. The charging circuit was obviously designed with NiCD in mind. Search the archives of this group, there has been quite a bit of discussion about this in the past. In either case, do not overcharge; consant overcharging is the main contributor to early battery failure.

Topic: 2275 Message: 2276

The chemistry behind those two types of batteries puts their nominal voltage at 1.25 volts (just as the alkaline chemistry puts those at 1.5V.) However, you might try going to a hobby shop that has RC equipment and asking for 'zapped' AA rechargeables. These are ones that are initially charged at the factory with a higher than normal charging voltage, then are hand picked for ones which put out the most volts. They will eventually go to the normal 1.25 volts but should last through several cycles. RC car enthuisiasts use them in battery packs to get a little more speed out of the cars for competitions.

I see nothing in the docs indicating that the radio can run from
rechargable batteries
(http://www.dis.org/radio/radios/icf-sc1/sc1.pdf). It is possible that
Sony did not intend this. Do your rechargable batteries have the
so-called 'consumer button' on top? Batteries with a flat top won't
make connection in some consumer electronics gear due to the design of
the battery holder. Your only option may be to construct an external
pack with 5 or 6 cells to provide enough voltage.

Thanks, Jim - Near as I can figure, there just aren't any rechargeables other than the Energizers, which are really alkalines with limited recharging ability. I'll probably use those, or make a pack as you suggest.

I'm not familiar with that unit, but is there any chance of bundling five AAA's in such a way that they'll fit in the compartment for the four AA's? You would obviously have reduced capacity, but at least you would have your six volts while it lasted.

I just picked up my pro 94a yesterday at RAdio Shack. (good sale!)
Thankfully, I'm not working at the moment, so I had the needed time to
figure out how to get the trunk programming in!

(it was many hours scouring the web for a website that had all of the frequencies in the
proper order!)

In any case, it's my first scanner. VERY addictive.

Hi Ken,
I got my pro 94 on sale also at radio shack. I still am confused some about putting in the trunking stuff. Do you pick up anything in the extended frequencies (216-224.995MHz and 1.24-1.30GHz bands)?

Don't expect too much activity on either of these. The 220 amateur band is not utilized much and the radio is DEAF on the 1.2 GHz band (which is not used all that much for voice, either.) Do an Internet search for the amateur repeater coordinator for your area, there will likely be a website with the frequencies for any repeaters in these bands. This is where you'll find most of the voice activity.

That sounds like a good idea. I will use the search engine for amateur repeater coordinator in my area. I have 5 police scanners. Most of mine are bearcats. I am a little obessive compulsive when it comes to police scanners!

2296. Programming Talk group ID's

Yahoo group: pro94owners
Date: 2003-05-21 20:58:25 UTC
From: littlejeepinpg
Topic: 2296 Message: 2296

Hi all,
Do any of you find the owner's manual frustrating? It's almost as bad as the one for my icom r2. I have a question about programing talk group id's. In the manual on page 48 at the end of the second paragraph it states "You can program ID's into talk group ID lists manually, during a search, or automatically." The next paragraph explains how to do so manually, but I can't find any info on how this can be accomplished automatically. Is it possible to have the scanner automatically store talk group ID's while doing a trunk search? I think it would be easier to have all the talk groups automatically stored and then later either delete or lock out the ones you are not interested in monitering.

It says (Page 45) that by pushing the MON(decimal) button (while
the ID is displayed) you can store an ID into a monitor memory, then
move it to a list location later (page 49). I think thats what
they're talking about.

> Is it possible to have the scanner automatically store talk group
> ID's while doing a trunk search? I think it would be easier to have

From: nomanual
Topic: 2298 Message: 2298

from another list

NV. outlaws frequency lists and guides

NEVADA has included a provision in their AB441 bill set to be voted on Monday, June 2nd that could outlaw publish safety / police / scanner frequency lists.

The bill text can be found at:

http://www.leg.state.nv.us/72nd/bills/AB/AB441_R2.html

Sec. 21 (f) is the part that concerns radio frequency lists / guides.

I suspect that the bills sponsor, Richard Perkins is affiliated with the Henderson Police Department in Nevada and may have additional interest and motivation in this provision beyond homeland security.

That needs to be snuffed out! Has this been forwarded to Popular Communications magazine or any other type of communication magazines?

From: Dave Reingold
Topic: 2298 Message: 2300

No matter what the Nevada State Legislature does regarding the restriction of publishing frequency lists, one can go to the FCC website and find everything they might want to know as the information is public record so access to it can not be restricted.

Furthermore, the same bill that seeks to restrict access to frequency lists also wants to restrict some driving priviledges. Read the proposed legislation (See original message, below for URL.). If it passes, many of its provisions will be tied up with court challenges.

Since the State of Nevada depends heavily upon the taxes derived from gaming and gaming is no longer found primarily in that state, you now can opt to do your gaming elsewhere if the State Legislature wants to put unnecessary restrictions on you.

From: David
Topic: 2301 Message: 2301

I have a Pro 94 .About 1 1/2 years old.Turn it on and it shows scanning all the numbers but nothing comes out.Turn squelch back and static, so speaker is ok.Last time I used it I programmed in new freq's and it accepted all .Got ready to use it this week and not picking anything up.Anyone know of a service palace in or around Lakw Wales Florida or area.Any help appreciated.Tried different antenna's including roof mount...thanks sluggo

2302. Free used front case

Yahoo group: pro94owners
Date: 2003-06-02 22:27:59 UTC
From: Mike
Topic: 2302 Message: 2302

I have a spare front case for the Pro-94 that is anyone's for cost of shipping, I would estimate about $3.00 USPS.

Last week I dropped my scanner and the display window was too scratched up to be useable, so I ordered a new front case (surprisingly inexpensive!) During the time I was waiting I decided to try and buff out the scratches with a wheel on a bench grinder. To my amazement I was able to buff all of the scratches out. As a result some of the grey plastic around the window is now shiny and smooth along with a small strip on the bottom front. It isn't in factory fresh condition due to those areas but I thought maybe someone could use it if their's is in worse shape. Please contact me off list and I'll send it to the first person who needs it.

-Mike

David,

Concerning your remark about a service place to repair your

Peo-94. Do you have a Radio Shack store in your area? If

you do - they would normally send out equipment to their

repair facility. You could also go online to http://www.radioshack.com
<http://www.radioshack.com/>

at their site you should be able to find a store.

When you bring up their web site - in the beginning part of the

site you will see 'Store Locator' just put in your zip code and

it will find the nearest store to you.

Have you tried the weather bands? If you are too far out from a NWS station try either a FRS radio (460's I think) or a marine radio. You should be able to find one or the other. I am having problems with both my 94 and 95. I think it is a combination of solar activity and our poor system here in Corpus Christi, TX. Good Luck.

I used to be able to pick up all the service bands with just a regular antenna and pick up a lot of stuff when connected to the roof antenna.Now it picks up absolutely nothing.I even cleared all the bands except the service of course by pressing the 2 and 9 and turning it on.It has not been dropped or anything.Worked fine until one day I was going to Leesburg for a bike event and programmed in all the freqs for that city.Never worked since . I will take it to Radio Shack today... Thanks...sluggo

One common reception loss problem with handhelds is a break in the cable within the radio that connects the antenna to the circuit board. If you can open the case & check that, and possibly reconnect it if it is indeed disconnected, might save you some heartache sending it out to a shop. They give you just enough cable to make the connection, and it may be advantageous to replace it with wire or cable a little longer if you can get it into the cabinet and close it.

I had a similar problem once. It turned out to be that the city that I live in added ten more frequencies (for a total of 30) to their Motorola trunk system and changed the control freq to one of the added frequencies which left my scanner looking for something that wasn't in it. It worked great once I added the new freq's. Rob Mills ~

The BNC antenna plug is where you get it all apart at. At the base of the exposed BNC there is a ring with 2 slots where you can unscrew it at and then somthing after that gets it apart. Someone else will know what to do after that (im not sure)

Was it connected to your outdoor antenna during a thunderstorm? Could
be surge damage induced by a nearby lightning strike.

Yeah, that would eliminate that possibility. The one that left me cold (a
Pro-91) only had the Tulsa trunk system programed into it.
I doubt you will find any loose connections unless it's had a hard drop. RM~

Was it connected to your outdoor antenna during a thunderstorm? Could
be surge damage induced by a nearby lightning strike.

2325. Receive quality

Yahoo group: pro94owners
Date: 2003-06-10 01:40:35 UTC
From: R.E. Jordan
Topic: 2325 Message: 2325

Has anyone else experience poor receive quality with the Pro-94?
I've been fairly disappointed with it's capability since purchasing
in December 2001. I've tried the 800mhz rubber duck, and even a
extendable rod antenna....with no success. Our trunk sites are
plentiful and I should not have any problems with local PD trunking.
Before my older 2005 cratered, it received great on the 800 freqs..
though it did not trunk.

Robert

Topic: 2341 Message: 2341

Hello,
If you press 2,4, and 9 while turning the unit on the display will show the version number of your unit. Be carefull, if yoy dont have the 4 pressed you could erase your stored frquencies! Also, in addition to the version(mine is 1.12)it shows F870H. Anyone know what that means?
Thank You

2342. Close out on RS scanner battery packs

Yahoo group: pro94owners
Date: 2003-06-19 21:53:52 UTC
From: Jrobmills@aol.com
Topic: 2342 Message: 2342

My local RS was closing out battery packs for some of the older scanners at 9.95 (was 29.95 new). It didn't include the pro-94 or pro-91 (the two that I currently own). It listed 10 or 12 models but the pro-34 (used to have one) is the only one that I can remember from the list. RM~

2345. Rechargeable battery packs

Yahoo group: pro94owners
Date: 2003-06-22 13:09:38 UTC
From: kd5pck@cs.com
Topic: 2345 Message: 2345

Sorry about that! I guess I should have put in the subject
line"battery packs". Below is the message that I was responding to:
<<My local RS was closing out battery packs for some of the older scanners at
9.95 (was 29.95 new). It didn't include the pro-94 or pro-91 (the two that I
currently own). It listed 10 or 12 models but the pro-34 (used to have one)
is
the only one that I can remember from the list. RM~>>

2350. Deleting frequencies

Yahoo group: pro94owners
Date: 2003-07-02 23:48:40 UTC
From: kitjohn316
Topic: 2350 Message: 2350

I entered in frequencies in order to scan the Kodak trunked system in Rochester, NY. I must be missing a frequency because it can't find the data channel. I want to delete only the frequencies from bank 2A. Since they are already entered the "mon/clr" button does not work, or at least I can't get it to work. I have other frequencies entered so I don't want to the reset described on Page 72 of owners manual. Can anyone help? Thanks in advance.

2351. Re: [pro94owners] Deleting frequencies

Yahoo group: pro94owners
Date: 2003-07-02 23:55:02 UTC
From: Mike
Topic: 2350 Message: 2351

Simply program in a frequency of 0 for each channel and it is deleted (and locked out.)

From: r_hanshaw
Topic: 2353 Message: 2353

I just bought a used pro94 receiver and would like to clear everything out that has been programmed and start anew. I didn't see anything about resetting in my manual....any suggestions?

Reb

2354. Re: [pro94owners] pro94 reset

Yahoo group: pro94owners
Date: 2003-07-12 06:29:57 UTC
From: Glen Tubbesing
Topic: 2353 Message: 2354

Last instructions in the manual. In my copy, it's on page 72...

1. Turn off the scanner.

2. While holding down the 2 and 9 keys, turn on the scanner. CLEAR flashes for about 5 seconds as the scanner clears its memory.

NOTE: Do not turn off the scanner again until CLEAR stops flashing. Otherwise the scanner might not clear its memory properly.

2357. PC and/or Cloning Pro 92

Yahoo group: pro94owners
Date: 2003-07-16 14:54:10 UTC
From: Dave Reingold
Topic: 2357 Message: 2357

I just picked up one of the closeout Pro 92 Scanners for $50.00. Check your local Radio Shack store to see if they have one left. This model is being phased out, so a few might still be available, but you may have to check for missing parts such as the antenna or battery holder, if the unit had been the display model. You may also have to download the manual as the original might be lost in the store.

To save the hassle of manually programming the Pro 92, is it possible to clone it from a BC 245?

The jack on the side of the Pro 92 seems to indicate that it can be programmed by a computer. Is this so, and if so, which software works? Is there software that will run on a Mac G-3 or newer running OS 9.2?

Thanks,

Dave

I don't live in Pasadena, but I can tell you this... go to the HRO store in Burbank or Anaheim and get any good handheld antenna with a BNC connector and it'll improve your reception tremendously. Tell them you need an antenna for a handheld scanner and I'm sure they can point you in the right direction. And, by the way... HRO is Ham Radio Outlet.

Check this URL for Diamond Antennas: http://www.rfparts.com/diamond/. I have it on good authority that they perform well. Glen suggests going to HRO and they are in stock there.

Having lived in Glendale and used several scanners in the LA-Burbank-Glendale-Pasadena area, I found that because of the mountains, you will receive base stations with no problem, but mobile and handheld radios are another matter. When these radios are used through a repeater or trunk system, you should be able to hear them.

When out in the open, such in South Pasadena or Alhambra, you should hear radios not using a repeater better than when up against the hills.

From: Terrie
Topic: 2365 Message: 2365

Just bought my first scanner Pro 94 I love it. Hard to get
accustomed to stuff. I primarily purchased it for severe weather,
and we live with in a mile or two from a max. facility prison.
Soon as I learn how to program it I will like it even better.
Radio Shack is so stupid, they gave me a book for it, turned out to
be the book for the 86. Big help, huh? So I went to web site for
help. Course I am a woman and not suppose to know how to do
anything. LOL Hope you guys dont mind helping me.
Most units around me have gone digital. I am wondering about squeals
I am picking up. Is that communication from authorities or is it
interference. Thanks for any feedback
MissMouthy

>exact. thanx .... gizmos .

The basic formula for calculating the length of a quarter-wave antenna
in free space is:

Length (in feet) = 234 / Frequency (in MHz)

Give or take a little for end effects, dielectric loading, etc. Not
too critical at 800 MHz, to be sure.

However, if the Radio Shack antennas appear too long, it is probably
for one of two reasons:

It is a gain antenna.

The length of the element has been adjusted to compensate for the
factors mentioned above.

It would be interesting to hear your results if you do try a basic
quarter-wave whip. Please report back with your results.

And a full wave length would end up being only 1.13 inches long. 1/2 wavelength = 492 divided by freq. wavelength = 984 divided by frequency.

Problem is, quarter-wave is the only length that matches easily to 50 ohms. Other lengths require matching networks for proper impedance match, although matching is not so critical for receive only applications. 5/8 wave seems to be the optimum for omnidirectional vertical antennae (but again, needs matching to 50 ohms) ... you can, of course, stack 5/8 wave elements to form collinear antennas with higher gain, but then you get into phasing issues.

Someone with more time than I have should run the numbers through NEC just for fun...

Of course, that's what we are really talking about here. The whip antenna on the scanner forms half of a half-wave dipole (quarter wavelength) in a perfect world, and the radio body forms the other half. Gain antennas throw a monkey wrench into the whole affair because of the matching networks that are required. For best results, the whip should be tuned to the radio. Of course, no one ever actually does this in practice... And again, usually not critical for receivers.

Naw, keep it. I ignored the fact that 1/4 wave at 800 MHz is tiny, and that all commercial whips, er, ducks, are probably gain antennas.

However ... it occurs to me that the stock whip is actually a compromise antenna designed for reasonable performance across (most of) the entire range of the scanner. If the original poster is primarily interested in 800 MHz coverage, it might be a good thing to purchase an aftermarket whip desinged for 800 MHz specifically. Centurion makes some good stuff.

I haven't noticed any appreciative difference between their 800mhz rubber duck and the original that came with the 94. But, there seems to be a problem receiving with the 94. I've compared it to others at RS at their stores locally, and they all seem to have a similar problem with receive. You can rotate the scanner in all directions.... Sometimes it actually seems to receive better horizontally or inverted. Strange, eh? No, it's never been opened and adjusted.

There's no way to have the light on constantly. To turn the autolight feature on/off: Turn the radio off if it isn't already, then press and hold the light button and turn the radio on. The display will say Autolight On (actually something similar as that isn't able to be displayed.) To turn it back off do the same again. This feature isn't available in the early non-A models.

>Is there any way to have the light on all the time? I read that theres

Probably not a problem with the scanner so much as the antenna. These
antennas are designed to operate over multiple bands, and can have some
pretty strange radiation patterns. I've noticed the same effect.
Nothing to worry about.

Yes, the PRO-94 has sensitivity issues, but the 800MHz antenna helps a bit on the 800MHz freqs and is the same on VHF...

I couldn't get Avilla, Indiana AEP's EDACS system at all with the stock antenna, but I added the 800MHz antenna and I could pick them up in certain spots around my apartment. It IS an improvement...

2387. Gizmos 800MHz noise&popping fixed by Motorola @Txmitter site finally !

Yahoo group: pro94owners
Date: 2003-08-27 19:59:44 UTC
From: Nathan Young
Topic: 2387 Message: 2387

Just moved to Lee Co.Fla.(Ft.Myers), finally after 4-months of popping & static on my Pro-94 and Pro-95 scanners , heard the police dispatcher saying to several cars for two days that Motorola was there working on the radio system . (lightning strike related-evidently months ago) After that the popping & static has gone away mostly. The new(25 day old) Pro-95 receives quite well, but the Pro-94 still has a lot of noise. The 95 must have better circuitry to cancel out noise. I'm just glad to find out the radios or my location was not the problem -and now I can listen again with minimal interferance. Still I'm puzzled why the 95 receives better laying horizontal on it's back than sitting uprite. Also moving it a few feet one way or the other affects reception tremendously even w/ an 800MHz antenna on it.

However..... my thanks to all who replied trying to lessen my hair loss over the matter.....thanx.....gizmo .

Radiation pattern. The antenna is a wideband helical whip, and it
ain't gonna act like a vertical antenna across the entire range.

>Also moving it a few
>feet one way or the other affects reception tremendously even w/ an
>800MHz antenna on it.

That's the nature of UHF radio wave propogation.

2389. Is Max system 8HH 800MHz antenna any good in fringe areas ?

Yahoo group: pro94owners
Date: 2003-08-30 02:25:30 UTC
From: Nathan Young
Topic: 2389 Message: 2389

Does anyone with a Pro-95/94 ,use the Max System 8HH,800 MHz antenna ?

It looks strange - Like an old antique "satalite" (sputnik) but I
continue to get stattic & popping at times on my Pro-95 and 94.
So I need somebody with this model ant. to tell me how it
performs. Does it take out the stattic ?

I want an antenna to go directly on my 95 such as this model.

Can someone gimme u review ? ..... thanx...gizmos

2390. nice place you have here

Yahoo group: pro94owners

From: jeff
Topic: 2390 Message: 2390

Greetings.
I've just joined.

I have owned a 94 for a few months and am pretty happy with it. Got a deal on Ebay.

I'd like to change a few things after having used it a while though:

1. backlight always on option
2. trunked and non-trunked bands at the same time
3. better speaker
4. alpha tags
5. computer interface
6. milair bands
7. all 1000 channels at the same time

But all in all, it works and works well. It absolutely *hates* my computer room (the Dead Zone) but does fine everywhere else. I love having lots of channels available.

I'm in MontCo/PA, where they're about to go digital, so I'll be using it a lot less shortly.

re: Number 2.

I programmed both my trunked and my non-trunked and let them scan together with no problems.

I agree on the computer interface would be nice. Along with Military air freqs.

2394. Antenna question

Yahoo group: pro94owners
Date: 2003-09-14 20:55:51 UTC
From: Bob Mueller
Topic: 2394 Message: 2394

I have what appears to be an old version of the 20-032 magnetic mount antenna. It's got the two load coils, but the upper section of antenna is longer than what's shown here:
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F008%5F009%5F010%5F001&product%5Fid=20%2D032
, and it does not have a BNC connector, but rather what looks like an long RCA-type male connector, except without the "ears" around the male prong.

Does this sound like an antenna I can use with the 94? Should I just need an adapter to convert the antenna to BNC?

As long as we're talking about antennas, is the 20-034 (9-inch rubber duck) any good? I'm mainly using the scanner on my desk, and occasionally in the car or van. I'm in the Columbus Ohio area, listening mainly to Franklin County agencies.

BTW, I discovered an easy fix to the cheap speaker in the 94. If you have a car CD adapter that goes in your tape deck, that works really well. Plug it in to your scanner's earphone jack, and slip the adapter in, and you're pretty well set. I tend to turn the volume up to about 2/3 on the scanner, then use the tape deck volume to adjust further.

The connector is what is commonly referred to as a "Motorolla" connector. You can get an adaptor at Radio Shack or any radio supply store, or just clip the end and put on a BNC male.

For indoor use you'll need something to use as a ground plane for best results. Attaching it to a file cabinet or a cookie sheet will work fine for higher frequencies but lower ones will need something larger.

I have the single-load RS magmount that I bought for the car some time ago, but ended up using in the house when a storm requires I disconnect the roof antennas, and while I don't really have any 800Mhz stuff locally, it works quite well for the VHF & UHF stuck to a steel plate I came up with that's less than a foot square.

It should do better than a duckie in your house, particularly if you have aluminum siding like I do. I put this antenna near a window to minimize the signal blockage from having a metal envelope around me.

The RS page you linked to stated that it came with a BNC adapter. If you don't have it, it's a couple of bucks and should work fine.

Hey oliver , i don't really know , but check to see if the adapter has a fuse inline , but if you fryed your radio then something else is wrong,,,, do u have a 12v power access plug in your vehicle?? i use mine to run my 50 watt 2 mtr radio and I only use my cig plug for my cell phone charger and it pluses on & off.

You need to check it out and check the voltage coming in??? but you should take the radio back and see if they will make it good, and the adapter it may be bad too.

sorry I not much help,,,, but the current is probably higher or maybe to low for your radio.

Continouswave1985
check this out for your trunking informationhttp://www.trunkedradio.net/
maybe that will help you out
good listening Dan

If you now see the frequency in the display, you may have taken it out of trunking mode. Hit the "TRUNK" button until trunk shows on the display and you will be trunking again. If you hit "scan" and have no ID's in the list you will not hear any conversations. Press the "SRC" (limit) key to perform an ID search which will stop on any active ID in the system. You can then use the "L/O" button to lock out any ID's you do not wish to lisen to.

2407. 450 mHz trunking system

Yahoo group: pro94owners
Date: 2003-10-19 11:10:37 UTC
From: n4lgy
Topic: 2407 Message: 2407

Hello everyone, I am having a heck of a time figuring out what type of trunking system the local police and fire departments have recently moved to. I have tried all the different trunking types and the UHF E2 trunking system is the only one I can program into the PRO94 that will not give me an error. The police used to be at 460 mHz and the fire was at 154 mHz. Now they both share the same system at 453 mHz and have 5 frequencies allocated to them. I can monitor both agencies by just programming in the frequencies direct and without the E2 UHF trunking mode and hear everything fine, except for this annoying keying and unkeying that the transmitters do while idle. There is nothing more annoying than hearing a CHOP CHOP CHOP sound coming from your speaker when the frequency is idle. When I program in the E2 UHF trunking, the scanner accepts it with no errors, but the audio is not passed through when a frequency becomes active. Has anyone had this experience with this type of system and if so will the PRO94 ever decipher it properly?

Gary - N4LGY
Collierville, TN

I'm not a trunking expert but I know that up here (Philly area) a lot of agencies have gone to digital systems that the 94 cannot receive (APCO digital, if I remember correctly). The new Pro-96 can, if you want to pay for it.

This may or may not be the problem.
(thinking it out in print, it's probably not the problem if you can hear audio in the first place)

Good luck in either case,
Jeff

Sounds like maybe LTR trunking, which the PRO-94 won't
do...

Not entirely certain about the type, though...

Topic: 2410 Message: 2411

Without SEVERE modifications the Pro-94 is not software programmable. Even with the modifications there isn't any mainstream software that will do it. In other words, the Pro-94 isn't software programmable. If your local RadioShack store said they will program it when the software is available they are just giving you a line of BS. The best bet is to become familiar with the procedures and to do it yourself. Initially it may be confusing but once you have the basic idea it is trivial.

By default, the PRO-94 does not have an interface to a PC to program. The PRO-95 does. If you want to program a 94, you will have to enter all the data on the keypad, unless you crack the case and add a serial interface, as described in previous threads on this board.

They are right, you cannot interface the pro-94 without several modifications, soldering, etc., and there is no program that is able to do this. You would spend much more time modifying and then trying to download the software, than to just program it yourself. For help on programming the 94 go to http://support.radioshack.com//support_tutorials/communications/20-524.htm.

My question is can you store and scan a Motorola SmartNet II system (I have thirty BRPD already programmed in bank one) and the website I got it from doesn't say Motorola I or II it just says Motorola analog for the East baton rouge sheriffs department. Does anyone know what type of Motorola system the sheriffs use? Is it different from what the city uses? And if so, can I still program in the twenty channels with the thirty I already have in bank one to make an even fifty and fill bank one up? Or do I need to program them in bank two? Any help would be greatly appreciated.

Police, EMS, and Public works trunks I could. They use Motorola smart system
II. So I posted it on the files section. I can pick up quiet a few good
conversations from police the only thing that I don't know is if I can program in 20
more channels to make an even 50, because they would be from a Motorola Type 1
system. Can you program in different trunking systems into the same bank? I am
proud to be a part of scan batonrouge and would like to know how I can get
approval to post questions I have and files to help others. Any help you can be
to me would be greatly appreciated.

From: Glen Tubbesing
Topic: 2426 Message: 2428

If they are two different systems and you want to monitor both of them, you'll need to put them in separate banks. Don't worry about filling up a bank. Remember, you've got 500 channels in Bank A and 500 more in Bank B. Unless you put everything under the sun in your scanner, you shouldn't come close to filling it up!

Subject: [pro94owners] RE: can you scan two diff. types of trunking systems in one bank

My question is can you store and scan a Motorola SmartNet II system (I have
thirty BRPD already programmed in bank one) and the website I got it from
doesn't say Motorola I or II it just says Motorola analog for the East baton rouge
sheriffs department. Does anyone know what type of Motorola system the
sheriffs use? Is it different from what the city uses? And if so, can I still program
in the twenty channels with the thirty I already have in bank one to make an
even fifty and fill bank one up? Or do I need to program them in bank two? Any
help would be greatly appreciated.

Thank you glen. I will program them in bank two soon. The only thing is on
the page I got it on it just says Motorola analog. The page is:
http://home.att.net/~wwhitby/la.htm. It is a great resource and list frequencies for
almost
all the parishes and agencies.

The trick is to program the scanner for one system and see if that works. If you can't hear complete conversations, make a change. If that doesn't work, change something else. Once you program the frequencies in to the radio, you can change the scan mode very easily.

Yeah, the Whitby site is full of great information for everyone around the country. You may also want to check out www.trunktracker.com for some more frequencies.

From: Shane Bruce
Topic: 2433 Message: 2433

Hello All,

Sorry for this may seem a little off topic.

I have a Radio Shack Pro-90 trunking scanner. Now, Something in the A/C unit where you'd plug it in is broken in there. So I cannot use the A/C unit. I will have to use Battery's but that's okay. If i can find a battery recharger for this unit. I know the Pro-90 cross's over to the Uniden BC235XLT. So hopefully some at there has one, or knows where I can get one ASAP!

Thanks,
Shane

From: James Cole
Topic: 2433 Message: 2447

I don't know if it's a national radio ad, but RatShack in the New England area has a spot where a lady goes into a 'Big' store and asks for a USB hub for wireless networking. The spot is suppose to enforce the 'idea' that Ratshack employees have knowledge. I think the employees need to tech edit future radio commercials. I have never seen or heard a wireless usb hub.

I have a question its a good one I m sure I mentioned what happen to my PRO94 well
it looks like I burned it by connecting my cig.lighter adapter I always used it fine till
one day well I disconnected and put on the battery and nothing well I guess my question is
dose anybody have or know of where I could get a diagram of the board so I could trouble
shoot it my self I took it to RATSHACK they were not help at all they didn't care about my
problem all they want to do is sell more radios please help

From: t609504@aol.com
Topic: 2450 Message: 2450

Geoff:
Welcome to the group.

Don't bother buying a PRO94. It is very hard to program each channel into the scanner via the keypad. Very much reminds me of the old 1st generation, 1970's, programmable scanners since there is no option to program via a data connection. After building a Pro92 then a Pro 93 to go backwards didn't make much sense.

I own many scanners, Pro92, Pro93, Pro94, Pro2006. The 94 and 2006 are NOT programmable via software. RS has the Pro95 on sale for $149.99. For almost the same price of a used PRO94 you will have a nice new radio. Of course, that is if you live in an area that has not made plans to go digital. Then a PRO96 would be a better choice as a starter radio.

Trunking has a learning curve. Not reading the book or having any help it was difficult but I did learn and continue to learn.

Tony

I think the 94 will be ending it's life real soon. Computer controlled is the new way to go these days. Get a 93, 95 or 96 or a Uniden unit. I wouldn't get a 94. I had one once and it was tough to program. It has no text display. I hated that.

I enjoy my pro-94A, on the back it will say 00or01or wathever then A0708 so if have the a towards the bottom it will read (year of purchase) 00 A (Model Number) and 08 (month of production). The new is fun! It's not digital but mostly only high press stuff is digital so you still get the good stuff at night especially.;)

Dear Club Memebers,

My name is Keith Thornton & I would just like to tell you about two wonderful websites. The first site is the Engine 117 & Tower Ladder 14 Website. It is a unofficial CFD site dedicated to the Engine 117 & Tower Ladder 14 Company. It has really good information about lots of things, including the Chicago Fire Department, safety tips & quizzes, pictures, and lots more. This site is wonderful & I recommend it to you. (It is www.freewebs.com/cpfd2003) The next website I highly recommended is the Battalion 8 Newsletter. This site is one of the greatest sites I have ever come across! It has updating information for, not only the companies in the 8th Battalion, but also information for the entire CFD. It has wonderful pictures & it is loaded with interest. Do yourselves a favor by visting it @ (www.battalion8newsletter.vxe.com) If for some reason you cannot access these sites, please visit the links page @ 5-11club.org & they are both listed there! THANKS...

CFD FAN...

Topic: 2456 Message: 2458

Hi, sorry I've had mine for 2 years this Christmas and I still haven't figured it out. I get it out every 3-4 months to try to figure it out but can't. If you ask the guys in the group they call you dumb and tell you to read the manual. And of course the manual is worthless. My Pro94 will display the talk group if its trunking. So if you look up your area, county or city on the Internet, you can figure out which police department is talking. Thats all I can help you with.
See ya, shadowstr1

Look on the back of the scanner at the PRO-94...if it says PRO-94, it's a Gen 1...if it says PRO-94A, it's Gen 2...Gen 2 has a few improvements over Gen1...it'll scan Trunked and Conventional at the same time, and the backlight can come on only when there's a transmission...

No, you can't listen to A and B at the same time...

From: Matt Roberts
Topic: 2456 Message: 2467

Here's the main rundowns:

PRO-94
WILL NOT scan Trunked and Conventional at the same time
Backlight is timed

PRO-94A
WILL scan Trunked and Conventional at the same time
Backlight can come on during transmissions

I'm not sure about much else that mat be different, because I have an
original...

Here is the way I do it...
1- Have just one Tower trunk scanning at a time.

2-hit the man button

3-hit the prog button

4-enter the ID

5-hit the enter button

For all you Scanner people of the Lower Hudson Valley, Visit my web-page
at:

2472. Trouble programming 2 types of Trunk Systems Pro-94A

Yahoo group: pro94owners
Date: 2003-12-18 22:34:27 UTC
From: gs45clm
Topic: 2472 Message: 2472

After having my scanner, for a long time, with one type of system, E2-800, I now want to add another jurisdiction into another bank, but its a different type of system, E1. I currently have my BANK-A Ch1-Ch50 set with an E2-800 system and everything works fine. I also have a couple of conventional frequencies in that same bank. Once the Trunking has finished, or there is no communication, it scans the conventional ones. Great, no prob.

I now want to add another jurisdiction, which uses the TypeI system, and place that system into Bank-A Ch51-Ch100. I can set the type of "Trunk System" to E1 for the respective channels #2 target, which corresponds to Ch51-Ch100, and again no problem. I try to set the preset fleet map to E1P4 by pressing the PROG then TRUNK then ^ until E1 is present then I press E then press DATA(ALT) but all I get is a beep and it won't allow me to do that. In other words It seems that I can't program an E1 system. I have tried to do this on BANK-B Ch1-Ch50 and it still won't let me choose a preset fleetmap.

Can someone help me out? I have tried everything including the infamous hard reset and starting all over again. I am happy with the scanner and I thought you were allowed to scan upto 4 types of systems??? By the way the scanner is a 94A Model.

Thanks for the help, HOPEFULLY :)

2473. Re: [pro94owners] Trouble programming 2 types of Trunk Systems Pro-94A

Yahoo group: pro94owners
Date: 2003-12-21 13:34:32 UTC
From: Mike
Topic: 2472 Message: 2473

Before you set the fleet map the entire trunked system must be programmed in. Press PROG, Trunk, then 2 to select that bank, then use up and down to select E1, press E. Enter all of the frequencies in the system. Press PROG again, then Trunk, 2, select E1 and press E. Now you can press Data to select a fleet map.

From: gs45clm
Topic: 2472 Message: 2474

Hmm, I will try that. I always just programmed the frequencies in first then went into the menu to change the "SYSTEM TYPE" using the PROG, TRUNCK, then the number reflecting where the frequencies are it seemed to work. I will try it later on today and post my results. Thanks :)

Thanks Mike. I did exactly as you said and it works perfectly. I had to use even another jurisdiction, which is closer to me but still utilizing the "SYSTEM I (or E1)". I guess my trouble, trying to get another jurisdiction in, lies with the distance from where I am to the tower. I used to be able to get the other jurisdiction in and my scanner locking in on the "DATA CHANNEL", but not anymore, hmmm. I am going to look into some sort of mounted antenna.

Again, Thanks for the help.

From: "nissanpower65" <nissan-power@...<mailto:nissan-power@...>>
Subject: Motorola Hybrid

Can some tell me which setting to use for a motorola type IIi system?
I've tried it on E1 and on E2-800, but neither seem to trunk this
system properly. This is what my local FD uses, and I can hear Tac 1
and dispatch, but not Tac 2 and Tac 3. It misses them all together

I have tried playing with the fleetmap too, but it will only work with
what I know is the proper settings for their system, and work fine on
a Pro-95.

Anyone have any ideas? Any help is appreciated. :)

Are you hitting the decimal point when you enter in the frequency? You have to do that, otherwise the radio doesn't know where the decimal is supposed to be. Here's a quick step-by-step.

1) Press <MAN> then the channel number where you want to store your frequency, then the <MAN> key again.
2) Press <PROG>, then the frequency, INCLUDING THE DECIMAL POINT, then the <E> key.
3) Listen away.

Check the manual to make sure the frequencies are within the ranges of the scanner. For example, you can't receive military comms (224-399MHz).

Shouldn't be a problem. He said railroad frequencies, and those are in the 150-170 range or so. I think he just forgot to put in the decimal point.

Thanks for stating that, but what's your question? You'll find you'll have no luck getting an answer to your question on the newsgroup unless you describe the problem you are having.

Are you having a technical problem getting the frequencies into the scanner? Or are you getting the frequencies in but you don't hear anything when you scan? Trunk or standard frequencies? Maybe you don't know what frequencies to program for your area?

Look through the archives of the group--- whatever problem you're having has probably been asked and answered already as the Pro94 has been around for awhile.

If not, please post your question in more detail and I'm sure you'll get a detailed answer.

Are you sure that you are working with a current list of frequencies? One way to determine this would be to talk with some of those that you are trying to listen to and ask if they have recently had a change of radio system.

At least that way you would not be increasing the number of gray hairs on your head out of concern that your scanner was giving you fits.

If you learn that there has been a recent change of the radio system, then you will have to find out what you can about the new system

You shouldn't get error messages regardless of weather or not the system or
freqs are in your area, you just wouldn't lock on to or hear anything. This
makes me think that your 94 has a problem or you are entering things wrong.
I suggest you call around and find out for sure what systems are in you area
and then sit down with your manual and try to figure things out.
I'll confess that when I first went to a trunker it took me quite some time
getting things into my thick head. I have 4 trunkers and have not entered or
programmed anything into them in over a year and if I had to mess with any
thing regarding trunking now I would have to drag out the manuals to do so.

I don't know if you've tried them, but there are a number of trunked radio webpages. Something to the effect of trunktracker.com and trunkedradio.net

A search might provide more accurate results.

also try this one: http://www.fordyce.org/cgi-bin/yabb1/YaBB.cgi#Conn it's been really helpful for me in PA.

Hi Scott,

I bought leather cover from Radio Shack. They have one that is soft leather and fits the PRO-94 like a glove. It is a good investment to help keep the scanner looking good. I think it's cost was around $20.00 and it had to be ordered.

Unfortunately this hasn't been available for a long time. The part number is still valid but the quantity available is zero and won't ever be restocked. These do appear on eBay once in a great while.

2500. talkgroup ID's help

Yahoo group: pro94owners
Date: 2004-01-13 11:36:07 UTC
From: honeybeesy2003
Topic: 2500 Message: 2500

I just recently got a Pro-94 scanner and I am a newbie to the whole scanner thing so I dont know what im doing. I gave up trying to read the manual and thought I would try here. I am having trouble figuring out how to enter a talkgroup id. I got frequencies down but I dont understand talkgroup id's. Could some please explain how talkgroup id's work and how to add them into the scanner. I read the manual and it says to get to status bit mode that you hold scan and I tried that and it didnt do anything.

Thank you very much for any advice you give

That's not a frequency, that's a TalkGroup number on a trunked system...a trunked system uses a few frequencies for several users and assigns each user a TG ID...you need the frequencies for the trunked system, not just the TG numbers...

2506. RE: [pro94owners] PLEASE HELP WITH TALKGROUP IDS

Yahoo group: pro94owners
Date: 2004-01-15 01:47:43 UTC
From: Marlo Montanaro- KA2IRQ
Topic: 2504 Message: 2506

Check this web site and it will explain what trunking is

http://www.interplaza.com/scandfw/tttipsfaqs.htm

The first FAQ has a link to an even more basic explanation of trunking.
Make sure you read that one too.

Once you have a basic knowledge you should be able to program your scanner
for the entire trunk system you are interested in.

Once you have the system in and can monitor the transmissions, you can
program the Pro94 to listen to specific talk groups so you can narrow things
down a bit.

The bottom line is that you don't enter the talk group ID's into your
scanner- you enter the radio frequencies into your scanner. Once your
scanner has all the frequencies and knows that the group of them together
form a trunk group (and the type and other details), it will tell you the
talk groups that it hears...

If you find the trunk group you are interested in on a scanner web site, it
should list all of the radio frequencies in the trunk group as well as the
talk groups you can expect to hear (and what they are). It may also list
things like fleet maps and size codes. These are the things that allow the
scanner to decode the talk group IDs. Granted this is all advanced stuff,
but don't get scared away by it. The Pro94 manual is not for the squeamish!
But if you follow it slowly, step by step I'm sure you'll get it working.
It takes everyone a few tries.

Once you do a little reading you can return here and ask some specific
questions- the folks here will be more than happy to answer them for you.

73,
Marlo
KA2IRQ

Works great on our Motorola system. I have never tried it on an Erickson system.
You may have seen it but I had a RS flyer in the mail last week showing the 94 on sale for $129 which makes in my opinion a real bang for the buck. RM

excellent question.
Now it's my turn: does your area use these systems? I ask because my area is going digital (APCO25) and my Pro-94 won't monitor certain counties because of this. My county is in the midst of a changeover, making my scanner of questionable use in the long-term.

The Pro-96 will do digital. It will also do military air (225-400), which the 94 won't. It has a computer interface and I hear really good things about it. The auto gain control is said to be a strong feature. The price, however, would be its weak point ($500).

I've had my 94 for about six months (good deal used on Ebay). If you go used, be aware that there's a 94 and a 94A. The 94 won't scan trunked and non-trunked freqs at the same time. I may be mistaken but the 94A will allow you to turn on the backlight until you turn it off, as opposed to the 94's few seconds.

Also consider whether you need alpha tags and/or computer control. Neither 94 will do those. The 1000 channels are two banks of 500, which you can't scan at the same time (if this matters).

The unit works solidly. It tracks the non-digital trunked bands just fine. I'd prefer better audio but you can't have everything.

Good luck and feel free to ask specific questions.

-jeff

Works great on EDACS and Motorola...I have a first generation one, so I can't tell you how it does with Trunked and conventional at the same time...It's actually a several year old design, but it'll do MOST systems just fine...

The 94A's backlight can be set to come on when there's a squelch break,
and turn off after the delay...
The 94 didn't have that feature...

The audio is OK...better than the PRO-93/95...but no match for the
PRO-96...

Ive got a Pro 94 and I love it. My ex got me stuck on the thrill. He had two scanners an older model scanner,however very nice, and the Pro 94. I fell in love with it. I got mine in Burleson at the Radio shack for $169 -25 percent with a family member discount. I also bought Police Call 2003 Edition. I havent learned the trunking system , I'm not that advanced yet but I have confidence with patience and perseverence I will have it programmed in no time.

>> I havent learned the trunking system<<

Just keep the book in hand and sooner or later it will sink in. I've had trunk tracker for years and still have to eye ball the book just about every time I enter anything having to do with a trunk system. There is a guy in Tulsa that goes around and programs trunk trackers for a fee. A friend wanted me to program his, I told him to leave it with me and give me some peace and quite (in other words, get out) while I do it. Cheerio's RM~

Tom:
About 14 months ago, a member of this group made the entire Pro94 service manual available in PDF format. See message number 2126. Unfortunately, the link he provided for the download no longer works. As luck would have it, I downloaded the file while the link was working, and it's still sitting here on my hard drive. The file is a little over 10,300 KB in size. If you want this file, I'll be happy to email it to you.

2521. PL/DPL codes

Yahoo group: pro94owners
Date: 2004-01-25 01:28:26 UTC
From: bkbroiler30
Topic: 2521 Message: 2521

I have a RS Pro94. One of the frequency resources for my area lists a conventional frequency for the Police Dept, then a PL/DPL code of 157.6. What does this mean, and how do I utilize this information with my scanner?

bk

PL is an acronym for "Private Line", Motorola's name for CTCSS
(continuous tone coded squelch system). GE called it "Channel Guard";
same thing, different name. Simply, a subaudible tone (below 300 Hz)
on the transmitted signal that is used to open the squelch on recievers
so equipped. It has two benefits: it ignores noise that can open a
simple noise-based squelch, and it is a method of keeping "user groups"
from hearing unneeded chatter from other groups on the same frequency
by using different tone frequencies. DPL is "Digital Private Line",
which uses a digital code to open the squelch, as opposed to an analog
tone.

As to what it means for your PRO94, nothing. The PRO94 uses a noise
squelch only, and ignores PL/DPL.

Topic: 2524 Message: 2524

Thanks for the heads up on the Trunking System.
This Radio Shack site I think will help me. I would be interested to see what you think of the site, if you get a little time and can check it out.
http://support.radioshack.com/support_tutorials/communications/200-0524/67354.htm
http://support.radioshack.com/support_electronics/doc57/57987.htm

Does anyone have the Arlington trunked system programmed in their scanner?? If so can you use a pre-programmed fleet map?? Which one??

Also does anyone have a good site for trunked glossary of terms??

Thanks
Gloria

2525. Why does it do this?

Yahoo group: pro94owners
Date: 2004-01-27 01:27:13 UTC
From: Bob Mueller
Topic: 2525 Message: 2525

I'm in the Columbus Ohio area, where most agencies are under the Franklin County Communications Authority. They operate a Motorola IIi system with 28 channels (http://www.qsl.net/wa8pyr/central.htm#fccafreq).

I have the 28 channels all programmed in bank A, along with 8 other channels for 2 trunking suburbs who aren't under FCCA. I have 46 trunk ID's stored (out of an available 50, right?). When I'm trunking, I see the "ID SCAN" message, and can see the activity markers at the top of the display come on and go off, and occasionally a trunk ID will show up and I'll hear traffic. What usually happens after a short time is that the scanner starts showing frequencies, then locks in on one that has traffic. As long as there's traffic on that freq, it stays locked on. Then it will usually go back to ID Scan. It seems to flip back and forth between trunking and scanning.

It seems to lock in on one of the last four channels. If I hit "SCAN" 4 times, it will clear out of those channels and go back to ID Scan.

I want it to stay on ID scan all the time. Isn't that what it's supposed to do, if I have the trunk ID's entered? AM I missing a keystroke or something?

Another question.: does it make sense to put the FCCA freqs in both banks, and just enter fire ID's on one side, then police ID's on the other? I know I can't listen to both banks at once, but that's OK for my needs. Any thoughts?

--
Bob Mueller

This sig is inoperative. Please try another.

It sounds like these last ones may not have been programmed in trunking mode. With trunking mode turned off, use the man function to look at each of these channels. If they were programmed as trunk channels you will see the "M" on the left side of the display.

>It seems to lock in on one of the last four channels. If I hit "SCAN" 4

Hi Gloria,
I suggest you get an account with the following place:
http://www.trunkedradio.net/
It is free and has tons of info regarding Trunked Radio.
In regards to the Arlington Public Safety System, Go to the Features section on the left and click on the TRS link. Then click on the map for Texas. Much data for that system there.

Here is another good site dealing with scanners:
http://www.strongsignals.net/index.cgi

I had another link with a glossary, but the link seems to be down for the last couple of days. If it starts working again I will post it.
Good Luck.
Craig.

2539. Display & case hack questions

Yahoo group: pro94owners
Date: 2004-02-05 07:03:57 UTC
From: Bob Mueller
Topic: 2539 Message: 2539

It has occurred to me a couple of times that I might want to mount my Pro-94 on my motorcycle, which brought up several questions. The bike is a 1800 Honda Goldwing, BTW.

First, is it reasonable that I could cut the case somewhere just above the battery compartment? What I'm aiming for is a smaller unit, to make mounting it easier. It would be powered from the bike, and I'd have to arrange for trickle power to keep the memory active, (wouldn't I?) but I'm just wondering how feasible it is.

The next question is somewhat more involved. I can read a schematic well enough to know what stuff is where, but that's about it. I have little idea of what each part does. That said, I'm wondering what drives an LCD display on a device like this. That is, where is the software that tells it to say "Id-scan?" How difficult/feasible would it be to try and hack the scanner and the LCD display on my bike so that the scanner display is echoed to the bike display? That way I could mount the scanner in the trunk, and still see the talkgroup ID on my bike display. The display is used by Honda to show me the clock, radio and volume settings, and also a basically useless logo animation at start-up. Failing that, would it be possible to simply buy the same LCD display part from RS, and mount it somewhere on the bike as a remote display?

Does anyone have links to a general discussion or such of the basic operation of an LCD display like this?

One other question popped into my head as I was thinking about this. I know nothing about the alpha tags. Are they user-inputted, or are they transmitted with the data, and translated by the receiver? Where's the logic/software that controls this? Can you replace the display driver or whatever in the 94 with the part from the 92, 95 or other alpha-tag scanner, so that your 94 shows alpha tags?

It opens fine for me. But, then, I uploaded the file. You may want to go to http://www.adobe.com/products/acrobat/alternate.html and download the latest version (it's free!) of Adobe Reader. Also, keep in mind that this is a 5MB PDF file. The best way to access it is to download the entire file to your own hard drive before you try to open the file.

To: Yahoo PRO-94
Subject: [pro94owners] Display & case hack questions

It has occurred to me a couple of times that I might want to mount my
Pro-94 on my motorcycle, which brought up several questions. The bike is
a
1800 Honda Goldwing, BTW.

First, is it reasonable that I could cut the case somewhere just above
the
battery compartment? What I'm aiming for is a smaller unit, to make
mounting it easier. It would be powered from the bike, and I'd have to
arrange for trickle power to keep the memory active, (wouldn't I?) but
I'm
just wondering how feasible it is.

The next question is somewhat more involved. I can read a schematic well

enough to know what stuff is where, but that's about it. I have little
idea
of what each part does. That said, I'm wondering what drives an LCD
display
on a device like this. That is, where is the software that tells it to
say
"Id-scan?" How difficult/feasible would it be to try and hack the
scanner
and the LCD display on my bike so that the scanner display is echoed to
the
bike display? That way I could mount the scanner in the trunk, and still

see the talkgroup ID on my bike display. The display is used by Honda to

show me the clock, radio and volume settings, and also a basically
useless
logo animation at start-up. Failing that, would it be possible to simply

buy the same LCD display part from RS, and mount it somewhere on the
bike
as a remote display?

Does anyone have links to a general discussion or such of the basic operation of an LCD display like this?

One other question popped into my head as I was thinking about this. I know
nothing about the alpha tags. Are they user-inputted, or are they transmitted with the data, and translated by the receiver? Where's the logic/software that controls this? Can you replace the display driver or

whatever in the 94 with the part from the 92, 95 or other alpha-tag scanner, so that your 94 shows alpha tags?

Think I stayed up past my bedtime. When I posted that I was thinking of a schematic posted to another Yahoo group. Didn't have any problems with this one. RM~

2543. Obtaining Inductor (L25)

Yahoo group: pro94owners
Date: 2004-02-07 22:12:13 UTC
From: Tom Fleres
Topic: 2543 Message: 2543

I believe I know which parts on my PRO-94 scanner are defective. Now the problem is obtaining the parts. Two of the three parts have Radio Shack catalog numbers, but I couldn't find a Radio Shack catalog number for the inductor (L25). The manufacturer's number is BLZY0077122. Does anyone know who makes this and where I can obtain one?

I did go to the link at 'Files' of this board and it worked. I think
it is the same file you are referring to. It had lots of technical
information on the PRO94. Anyways thanks for your concern.

2545. For Sale/Trade

Yahoo group: pro94owners
Date: 2004-02-15 21:34:01 UTC
From: jmtworc
Topic: 2545 Message: 2545

Hi board. I'm going to try to either trade-up or sell my 94 (not 94A). I'm actually looking for a 94A due to the area that I live in (EDACS on public safety, EMS & surrounding towns on conventional).

As for the radio, it's in pretty good shape. I've owned it for about 4 years. It has the original leather case (that is either hard to find or not made anymore). I also put (2) white flat LEDs inside the case for the display. Right now, the LEDs are set-up to run off of the charger, as I tapped for the power off of the charging jack. It has some normal wear marks on the case, but nothing that I wouldn't be too concerned about. I own a lot of handhelds and base units, and I'm very maticulous about handling and care of these.

I bought it brand new and have the manual, original antenna and (4) NiMH batts for it.

I figured I'd throw this out to you guys before I put it up on eBay. I am considering any offers right now. If you have any questions, feel free to email me direct.

Thanks!

- JT

I'm not interested in buying your radio, but I would like to know how you put the LEDs in to keep the display lit up all the time (I have a 94A). The only info I've seen here is to hit the light button, hit K/L and then hold any other key to keep the light on. What I want is a switch I can turn on to illuminate the display while I enter limit searches or add/lockout frequencies.

2547. Re: Obtaining Inductor (L25)

Yahoo group: pro94owners

From: Casey Miller
Topic: 2543 Message: 2547

I looked at the schematic, for the Pro-94, and went to line (L25). There is other information on that line, which includes

Description: Inductor Molded LZ-077 395AN-0054Z 1.2MH
Mfr's Part No: BLZY0077122

From this tells me that you need to find a 1.2MH (Mega Henry) inductor. That capital M worries me, because I feel that is a missprint. Sure enough I found the L25 on the actual schematic and it reads 1.2mH. It is on page 50 about middle ways down on the middle-right side. These should be easily available, but your best bet is to find an electronics store like Austin Electronics, or other people here should have a better idea or location.

Hope this helps you.
Casey Miller

Don't think you will have any problems, just have that parts list in hand when you call. I've ordered parts from them and they always seem to have them unless the product is 7- 8 years old then you can run into the "no longer available" problem on non standard parts. RM~

Let me clarify myself a bit. As I see it, the service manual shows, in the table and not on the actual schematic, all the inductors with a lowercase greek letter u (mu) in front of the H to get uH or microHenry, except for the (L25). The service manual shows the (L25) to be 1.2MH, which is 1.2 MegaHenry to me, and that is why I said it doesn't make much sense.

I still believe that it, the service manual list, should read 1.2uH or 1200mH and not 1.2MH.

```
E-notation...prefix...symbol
E + 06.......mega.....M
E - 03.......milli....m
E - 06.......micro....u(lowercase greek - mu)
```

I hope this clarifies things a bit.

Casey

You might inquire what it would cost to retune that unit to the RS service dept in Dallas (not a local repair service) for re conditioning. It might surprise you at what it might cost and they have all the equipment (high dollar freq generators and etc) to do the job right. I have never returned anything to RS for service but have heard that the Dallas unit is good.

I haven't returned anything for service in years but once returned a Uniden scanner to Uniden in KC and they had a flat rate charge for each scanner and as I recall it cost me less than $50 for repair and tune up. I also know that TenTec is also quite reasonable on factory repairs on their equipment.

It wouldn't cost you a cent to ask. RM~

PS I'm not knocking all local repair services (I've known some good ones) but do know their are a lot of self appointed experts out there packing soldering guns.

Sorry, it doesn't. Nor does any Radio Shack scanner. Be prepared to spend some money right now for one that does. In time the prices should come down and more models will be available. For now look into the Uniden 250D and 780D.

This probably isn't the most appropriate place for this, but... Given the sheer cost of the new Pro-96, shouldn't it include LTR systems? And the continuous coverage of the Unidens? For the price I am not impressed at all with this new unit.

The Pro-93/2053 and Pro-95 can do this also. But in all of these models the frequencies in the gap areas are outside of the front end bandpass filters. Sensitivity is anywhere from not good to near deaf as a result. I'd like to see RS do continuous coverage in the future, at least on their high end models.

Well I got my scanner back today from Radio Shack. First thing I would like to say is- My hats off to Radio Shack. They said 1-week and I got it back in 5-days. They treated me like a valued customer. Now here is what they did.---REPAIRED---RX and TX OSCILLATEOR, DETECTOR, and PLL-VCO in HNDSET cleaned keypad REPAIRED RF input and aligned, and use only specified adaptor for unit NO PS. I understand the aligned and cleaned the keypad part , but could some one explain the rest to me. Thank you for your time. Ray

2568. FRS/GMRS radios

Yahoo group: pro94owners
Date: 2004-03-25 20:43:30 UTC
From: Bob Mueller
Topic: 2568 Message: 2568

Does anyone with kids have any real-world experience with either FRS or GMRS radios? I'm considering getting a set since we live out in the country, and our nearest neighbor is about 1/4 mile away, and the kids are going up there a lot. My oldest is 8; she'd be the one using it the most, I think. Terrain out here is fairly level, although we're in the middle of a 45-acre partially wooded area (about 40% coverage), with a couple of deep draws.

I'm looking at
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3086044232&category=14980
or something similar.

On the GMRS radios, you just have to license one person in the household, correct?

--
Bob Mueller

There can not be a crisis today; my schedule is already full.

>>> about 1/4 mile away, <<<

I would think that 1/4 mile would be a piece of cake. I have a pair of Motorola FR50's and have talked home from about a mile away while in the car with them. We use them while in shopping centers (wife has habit of getting lost) or going to grand kids sporting events and etc.. If I was going to do it again I'd go for the GMRS.

Rob Mills

PS, also great when traveling in two or more vehicles together.

From: Richard L. Elliston
Topic: 2568 Message: 2570

Bob:
We use FRS radios with great results under exactly the circumstances you have described to keep up with our nine-year-old. One suggestion: Make it a rule from the outset that only Mom or Dad will turn the radio off, change channel number or change volume setting. I think you'll find that at the end of the day the kids will place these radios any place EXCEPT in the charging stand. If the settings remain unchanged, you can easily transmit tones and locate all of the radios around the house. BEWARE: These radios are tiny, and kids love to drop them in their pockets. If forgotten, they don't fare well in the washing machine!

2571. question - trunk programming Motorola Type II less than 850mhz

Yahoo group: pro94owners
Date: 2004-03-25 19:48:02 UTC
From: Indy D
Topic: 2571 Message: 2571

Hi, I am new to this group, but not new to scanning. I have had a pro 94 for several years and have one question. My city's trunked system (Indianapolis Meca) has many frequencies between 815-850mhz. The scanner with not truck when these frequencies are programmed in the scanner. According to http://marksscanners.home.comcast.net/94/94-1.html. The frequencies for Motorola Type II trunking are between 851.0000-868.9875 MHz. Can anyone help me as far as the programming of these other frequencies?

Thanks

The frequencies between 814-850 MHz are the mobile frequencies. The repeater output frequencies you need to program are 14 MHz higher.

You need to program the higer frequencies.

Ed

From: Jeff
Topic: 2568 Message: 2575

Remeber if you are going to use GMRS radios you need
to have an FCC License. You do not need have a
license for the FRS radios though.

The reson for the license is becase of power output.
The FRS radios only put .5 watt where the GMRS put out
up to 5 watts.

2576. Pro-94 Audio problem

Yahoo group: pro94owners
Date: 2004-03-31 01:28:15 UTC
From: Geoff Armstrong
Topic: 2576 Message: 2576

Hello pro-94 owners,

I have a problem with my unit. I can hear the key press beeps at normal audio, I can hear AM (airband) transmissions at normal audio but anything in FM comes in extremly low audio on both the speaker and headphone jack. It's a shame that my only trunk tracker is damaged now. I have no idea what happened but it just stopped working properly. Any suggestions? Would it be cheap to get repaired or not worth it?

Thanks,

Geoff

With GARBAGE like the Superbowl half-time show going out over the
public airwaves, I would hope that the FCC has higher priorities than
enforcing the GMRS licensing requirements against Moms and Dads
looking for ways to keep up with the kids!

Indeed. Forget the FCC and its rules and regulations. We should be allowed to transmit on any frequency we want whenever we want. No need to regulate anything of the sort with licenses and other such nonsense.

Let me ask you this. When your attitude such as this allows GMRS to become unlicensed like the CB service, who are you going to complain to when the "GARBAGE" starts coming to your kids through the GMRS radios? No license means no ID requirements.

I saw this kind of thing coming when Wal-Mart started carrying GMRS radios along side the FRS ones. If I can buy it at the giant super-store, it must be OK to use it, right?

From: coolpooler876
Topic: 2581 Message: 2581

hi all

I was wondering what antenna you recommend. I currently have one of those rubber antennas and it doesnt work that great. I am looking for one that I can keep at house and mount on car. Thank you for any advice.

2582. Holding down buttons and turning unit on. Never saw this screen.

Yahoo group: pro94owners
Date: 2004-04-04 09:50:01 UTC
From: pagu923
Topic: 2582 Message: 2582

If I turn off my scanner and hold down the following buttons
DLY,ALT,2,9 then while holding them down turn the scanner back on.
What is the purpose of the screen that pops up? It only allows the
up and down arrows and the MON/CLR buttons to function.

Thanks
Rookie

Look here:

http://www.radioshack.com/category.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F008%5F009%5F010%5F001&Page=1

And here:

http://www.maxrad.com/cgi/maxrad_products_ind.cgi?product=10097&catalog=10003
http://www.maxrad.com/cgi/maxrad_products_ind.cgi?product=10167&catalog=10003

You will get the best performance at home if you use a dedicated base antenna mounted high and in the clear. Don't use Radio Shack coax - Use Belden 8214 for short runs, or Belden 9913 or LMR900(?) or equivalent for long runs. See www.cablexperts.com.

Easiest to deal with would probably be a mobile mag mount, but you will wan to fab some kind of metal plate with radials on it for home use for best results.

Glad I could help. The mag mount should perform well, and will
certianly perform better then the stock "rubber dummy load" antenna.
Be aware, however, that in areas of high RF concentrations (i.e.,
centers of large cities, broadcast tower sites etc.), a better antenna
will also suck in more crud and you may not hear what you want as well
at times.

73,

Jim

>looking at bulk-buying some batteries from www.batterysaver.com.

I've got that same charger, and it works fine with any brand battery I throw at it. What is important is the battery chemistry, not who makes it. (Well, to a point; I don't buy RadShack NiCd anymore, but that's another issue). IOW, a NiMH is a NiMH. The important point is that the charger is rated for them. NiMH requires different charge management from NiCd for best results. Since my favorite battery book appears to have been taken offline for free reading, I'll have to send you here for more info than you probably want to know:

http://www.batteryuniversity.com/partone-11.htm

Note this line in particular:

A charger for nickel-metal-hydride can also accommodate nickel-cadmium, but not the other way around. A charger designed for nickel-cadmium would overcharge the nickel-metal-hydride battery.

(That's for the folks who swear that they can charge thier NiMH batteries just fine inside the Pro94... :-)).

Yes, you can charge any NiCd or NiMH batteries in there.

I personally find it easier to put in NiCd batteries and charge them in the scanner. If you have a spare 9V wall transformer of the appropriate current rating you can put a plug on it for $2.

You can go to www.radioreference.com

You need to register then use their database for you frequencies, as well as TG ID's. Pretty good website.

hello to all.

Good m30624fgngp is a microcontroller CMOS that is an integrated circuit programmable and is the one that keeps software from control of pro94, and my objective is to read this program. I am looking for the passband ones of pro94. it is to say the blocking one of some frequencies.

From: jomak63
Topic: 2605 Message: 2605

I'm selling my Pro-94A that see no use lately. I use my Pro-95 with built in slicer and Pro-96 exclusively now. Excellent condition. I just aligned it at work per factory service manual and it is dead-on with all factory specs. The alignment is probably beeter than when the radio first came off the assembly line. Comes complete with box and manual and original antenna. Asking $135 including shipping/ins in the US.

2609. Re: Obtaining Inductor (L25)

Yahoo group: pro94owners
Date: 2004-04-26 03:06:31 UTC
From: Tom Fleres
Topic: 2543 Message: 2609

Sorry it took me so long to respond, but with overtime, a vacation, and taxes, I didn't have much time to look at the scanner. Anyways, I didn't have any luck obtaining the inductor (L25). They have discontinued that part. Do you know anywhere else I may be able to obtain this inductor?
I did ask the Radio Shack Service Center how much it would cost to service my scanner. It was $50-$60 to send it in plus the cost of whatever they need to do to fix it. If I can't get a hold of an inductor, perhaps I'll send the scanner to them for repair. I'd like to know where they will obtain the inductor though.

>>> I didn't have any luck obtaining the inductor (L25). They have discontinued that part.<<<

That's sick, that radio hasn't been out of production long enough for them to not have any parts on hand. I'm wondering if maybe you got a hold of someone who didn't know which end is up, they seem to have plenty of these folks hanging around.
I'd be tempted to try ordering again and see if you can get a hold of some one else who might accidentally know how to fill the order or maybe talk with someone in their service department.

I doubt the cost of L25 will be much so you will probably be looking mostly at labor unless other parts went out causing your inductor to fail which is quite possible.
I looked at a couple of other RS scanner parts list and the ones that I looked at didn't show any inductors or chokes so maybe these are just common generic parts that could be obtained (if you knew their value) from Mouser or Digikey.

Think I'm past ready to take the Big red R off of my shopping list, that company is a has been. RM~

PS, hooked my 94 to a amplified computer speaker today and now I can hear the damn thing, sounds like a real radio.

I've got a 94a and have been using them (nickel-metal-hydride) for aprox 2 years now and haven't noticed any problems, the radio gets very slightly warm but not hot, the batteries seem to hold their charge very well.

I can't locate my manual right now and I may be having pipe dreams (my senior moments are turning into hours) but I was thinking that the manual said it was okay to charge NMH batteries in the radio with the slide switch inside the radio set to the ni-cad position. RM~

This has been covered. Check the group archives. Yes, the manual does
say that you can charge NiMH in the scanner. However, the scanner is
not designed to properly manage NiMH batteries. I have confirmed this
empirically and by looking at a schematic. Bottom line, yes it works,
but you will not get the life expectancy from NiMH batteries that you
should if they are charged in the radio.

Your right, I picked it up about a year and a half ago (one of those weak moments) on close out. Think I paid $169 or $179 for it. Opened the box once or twice, looked at it, said to my self "that's a nice looking radio" and put it back in the box. :) Anyway I bought a new table saw last week so have to justify it to my better half. RM~

PS, I also have a couple of short-wave receivers I'm going to get rid of (if I can find them), a RS DX-302 and a Sony 2001(not the D version).

I bought them on E-bay, so they could have been junk or old to start with.
in their favor the other 6 have worked ok. I always use the MAHA mh-c777, a charger, conditioner. Never had any problems with any other nimh bats.

Have had very good luck with Rayovac and energizer nimh's.
hope this helps.

2622. Help with Pro 94

Yahoo group: pro94owners
Date: 2004-05-01 15:42:08 UTC
From: sandya1967@aol.com
Topic: 2622 Message: 2622

Hi everyone, im very new to the police scanner hobby, I bought a Pro-94 last night(did not want to spend 500 on a digital right now) And im very frustrated. I cant get ANYTHING on this radio.... Im very confused and thinking about taking it back very soon..All i have heard after all this time is a bunch of beeps and i did get lucky and i heard one pilot tell me how high he was in the air..wooowee.... uhgggggg... Can someone help walk this dummy thru the programming of this radio? Im in Akron ohio, i know i cant get the police but im sure i can at least pick up something else.. I would also really like to get into the trunk part of this, Not sure what that is either but it sounds interresting..LOL
Thanks sandy

Hi! I answered your message on the RadioReference board, but I'll answer here, as well. You won't get anything from Akron. They're digital. You won't get the Summit County Sheriff. They're digital. You CAN get anything else in Summit County. The Macedonia area is a good listen, sometimes. If you need help, I'd be happy to meet up somewhere and help you program it. I own a PRO-94 of my own, however an older one.

I live in Parma, and could travel to anywhere between here and Macedonia. I don't know Akron enough to even think of getting lost down there...

You'll like it for analog, but it's almost totally useless in Akron itself.

You should get Macedonia just fine. It's only about 26 miles or so north of Akron. I pick up Akron's digital system from there. Actually, I can get Akron from some places in Cuyahoga County.

You can fill up most of one bank with conventional analog freqs for Summit County. There's still a few analog trunked systems you can listen to, as well, but they'll be a little harder to pull in. I don't have any analog trunked systems in my scanner for Summit right now...I'm setting up my PRO-96 for Summit to have its own V-Scanner folder, that'll have all of the trunked and conventional for the whole county. As it stands, I'll give you some analog, conventional to listen to:

Ohio State Highway Patrol Post 76: 155.445
Ohio State Highway Patrol Post 76: 44.74 - BASE 44.86 - CARS
Ohio State Highway Patrol Mobile Extenders: 465.550
Macedonia Fire Department: 423.950
Macedonia Police Department: 423.625
OLD Sheriff North: 460.100
OLD Sheriff South: 460.175
OLD Sheriff Channel 4: 460.425
OLD Sheriff Channel 3: 460.250
County Fire Pagers: 33.860
Northfield & Sagamore Hills Police: 423.200
Twinsburg Fire Department: 423.825
Twinsburg Police Department: 423.075
Police Intercity: 155.370
Northfield Fire Department: 154.355
Hudson Police Department: 423.100
Hudson Fire Department: 424.275
Summit County Utilities: 453.450
Metro Lifeflight: 155.385
Macedonia Service Department: 424.250
Walton Hills Police Department (Cuyahoga County): 423.525
Northfield Center Fire Department: 423.750
Barberton & Munroe Falls Fire Department: 154.370
Barberton Police Department: 155.100
Munroe Falls Police Department: 159.150
Norton Fire Department: 155.850
Norton Police Department: 151.070
Stow Police Department: 155.190
Tallmadge Fire Department: 155.145
Akron-Canton Airport Public Safety: 453.225
Akron-Canton Airport Public Safety: 453.475
Maple Heights & Oakwood Village Fire Departments (Provides Fire

Protection to Walton Hills): 424.225

It's quite possible that you can hear quite a bit from surrounding counties, as well...
You'll be surprised at what you'll hear!

From: cpfd2003
Topic: 2627 Message: 2627

Dear Group, I have just created a Yahoo Group & I would like all of you to join it! This group was created in dedication to the entire Chicago Fire Department, but especially to the hardworking firefighters & paramedics of Engine 117 & Tower Ladder 14's firehouse. This group is a CFD discussion board, open to firefighters, paramedics, fans, buffs, and anyone else from near and far. This group is intended to replace the website of Engine 117 & Tower Ladder 14. Please go to Yahoo.com & search for the group named "Cpfd2003". Thanks!!! Hope you join!!!!!!!!!!!

From: Tom Fleres
Topic: 2543 Message: 2628

I thought it odd too that the part was discontinued. Perhaps I will try calling them again. If I get this scanner going I was also considering hooking it up to an audio amplifier. The audio quality was never good.

From: bkrueger66
Topic: 2629 Message: 2632

According to the manual for the Pro-94, the backlight is on for only 15 seconds, and is controlled by the button.

According to the manual for the Pro-94A, the backlight button has the same function, and also can be set to turn on automatically whenever a message is being received. This function is set by holding down the light button when turning on the scanner--a message "aut lit" appears when this function is set. Turn off by holding down the light button when turning on the scanner-- a message "off aut lit" appears and the Auto Light function is turned off.

Howver, the light will not be turned on longer than 15 seconds unless a message is being received.

From: Robert
Topic: 2634 Message: 2635

There are still thousands of frequencies out there that are not digital and probably will not become digital. True, many city law enforcement and public services have or are going digital....or are trunked.

But, in my travels I have found (in the southwest) many many cities, counties, and highway patrol areas that are still analog. Usually it's cost related and too high for them to consider upgrading.

Then, there are tons of non-public service frequencies that will not become digital. Try searching the frequencies. Don't rely on what you can't hear at home. Take it elsewhere and see what you hear. Put up an outside antenna.

Up until a few years ago, I still had working Pro-2004s and 2005's. Even though they were not tracking or digital capable, they were great for monitoring everything else.

But, if the only reason you have a scanner is to listen to police & fire....and your home town has decided to go digital. Then, I suppose you could always sell the scanner.

Robert

2636. Rail Antenna & Program

Yahoo group: pro94owners
Date: 2004-05-15 16:35:06 UTC
From: firemarshalryan
Topic: 2636 Message: 2636

Hi everyone,
I was just wondering if anyone in the group listened to the rail band (besides me) that could tell me what is the best antenna to recieve that band. I have also tried to subscribe to the ATCS group with no luck. I wanted to get that program to monitor the rails a little better. If anyone is firmiliar with the program and/or is a railfan, please let me know what you think.

Thanks guys..
Ryan

is this a question or a statement?

The Pro-94 was my first `serious' scanner, way back a year or so :) I enjoyed the trunking then found out it wasn't really that important.

I live near Philly, which went digital a while back. My county's police and fire are headed that way too.

That having been said, I'm still quite happy with my Pro-94. It's still a decent receiver and depending on what you want to monitor, quite effective. No digital, no cel(BFD), and you can't change the AM/FM mode for VHF military monitoring, but it still has a lot of channels and works quite well. You can use it as a search scanner, checking up and down certain bands while you have another scanner with programmed channels. There's quite a bit of action on these bands.

Looking for something better, I did some research. Since I'm into milcom and HF(shortwave) monitoring, I looked for a radio that did it all, including AM/FM/USB/LSB/CW. I found a deal on a used AOR8200 that's a really nice receiver. What does it give me over the Pro-94? HF band, sideband, 1000 channels at once, backlight on continuously, alpha tags, greater sensitivity, computer interface(EXPENSIVE cable), storable searches and scans, better audio, and a really ugly military green case :)

What does the Pro-94 have over the AOR? The ability to select scan banks with one button, trunking, easier function access, longer battery life, and it's a better weapon (larger and heavier).

The units are obviously not directly comparable. I made my decision based upon features and price, plus the lack of $500 or more to purchase a digital scanner. I'm not sure the extra money for digital would translate into that much extra value for what *I* monitor.

Your mileage may vary.

>>>can I assume that it is an A model,<<<

The "A" is visible on the back of the scanner, it's in a square block just following the model number. It's hard to see if the belt clip is on the scanner but can be seen just under the top of the clip on your right when looking at the back. RM~

From: John Gallagher
Topic: 2648 Message: 2648

If anyone has frequencies for Old Orchrd Beach, Maine,
I'd like a list please covering the Police, Fire and
Public Works.

Also nearby town of Scarborough.

Thanks for your help,
John

It will be the A version, that date is well beyond the cutoff point.

Those noises aren't there to be annoying, they are data and control signals for the trunking system. With a trunk tracking scanner you won't hear them. Well, that's not entirely true. You may hear disconnect tones at the end of a transmission if you are not getting a strong signal from the data channel and alert tones will still come through.

One is the backlight, it will come on the squelch breaks on the "A" and stay
on for a few seconds.
Don't hold me to this (I have the "A") but I don't think the non "A"s have
the ability to scan trunked freq's and non trunked freq's at the same time.
RM~

The original, the PRO-94, could not scan trunked and conventional at
the same time.

The PRO-94A can, and also added a feature where the backlight comes on
when the squelch breaks...

From: blaken70
Topic: 2657 Message: 2657

First of all hello!! I am new to the forum. I have a Radio Shack Pro-94 scanner. I really like it. But i was looking at a Pro-95 scanner that a friend of mine has. My question is besides being able to plug the scanner into your pc and upload or download frequencies what other difference is there between the two scanners? I wanna know if it would be justifiable to go out and buy the pro-95 after i already own the pro-94. Thanks alot!!!

The PRO-95 is way better! It has text tags, tracks trunked systems
better, and even has better all around sensitivity...

Anything else? Let me know :)

I own both. There is no comparing the two. Pro-95 is way better.
The only thing the Pro-95 can't do that the Pro-94 does is VHF trunking.

Hope this helps you out.

2660. Two base/offset frequencies?

Yahoo group: pro94owners
Date: 2004-06-16 06:37:33 UTC
From: John F. McRAE
Topic: 2660 Message: 2660

Hi everyone,

I have finally got my PRO-94 to trunk-track (400mhz Mot type II) the local Govt.Radio Network here in South Australia. I cannot switch it off though, 'cos I lose the second base and offset frequency, and, as a consequence it will trunk track then.

Am I doing something wrong, or is this a problem with the pro-94. If any other users of the pro-94 have/can successfully store(d) 2 base/offset frequencies, please tell me how it is done.

All help and advice is sincerely appreciated.
John McRae, VK5PO, Australia

Topic: 2660 Message: 2661

I believe that the pro-94 will accept only 1 base and offset per system. You may be out of luck if your system uses more than 1 base and offset. I believe that the uniden scanners newer than the BC-780 will allow 3 base/offset per system. You might also look for the older pro-92 that used subaudible tracking and did not depend on the control channel and system map.

Timo

From: dmoltr_blink
Topic: 2662 Message: 2662

Coming to a RadioShack near you:

At the bottom of each receipt containing a qualifying scanner purchase will be information about a new technical support hotline you can call for help. It is supposed to be free for a year, although it is not going to be a toll-free number.

More information will be coming soon, this is pretty much all that I have about it right now.

u will need to purchase the pro 96 to listen to digi stuff. but be
aware. there are many types of digi systems and not all digi scanners
will be able to receive them. this has become a very big issue in
various scanner groups. so, be sure what is in your area, be sure u
can even scan it, and as far as the trunking goes, aside from the
fact that the 94 only goes motorola and edacs, its all anolog.

From: Larry Hassell
Topic: 2671 Message: 2671

I was a member of this group way back when it first started. I eventually sold my Pro-94 after purchasing a new scanner, I have had several scanners since then and I now have a Pro-96 even though not much here (Orlando, Fl,) is digital. I have a friend who wants to get into scanning without spending much money. I was able find a used Pro-94A for 50.00 on the Strong Signals site, which is about is cheap as it gets, I guess. I am going to program it for him when it arrives and he can reimburse me for the 50.00 and I hope he can get as much enjoyment as I have gotten from the scanning hobby. Which leads me up to this question, does the 94 have the 5 second delay between trunking banks like the BC245 had before the upgrade. I was trying to remember from from the earlier experiences with the 94, but can't seem to. Getting old, I guess!!!

Thanks, Larry.

no.. i think camp grayling (grayling mi) may use a 400 trunk base offset type of deal. but i havent had to use that type of deal in my areas ive been. i really aint to impressed with this unit. but for regular stuff i guess its ok. wish i could scan all 1000 channels rather than just 500 at a time.(pro-94, not pro-94a)

Topic: 2677 Message: 2677

Hi all! As The New Guy I'll just give you my specs up-front:

Radio newbie, geek (security), electronics enthusiast (circuit bender) and amateur photog hunting news events - in a nutshell.

I tried the $99 Uniden (60xlt?), Pro-82 and one other before I landed on the Pro-94. Actually I just drew the line at that price. Okay fine, so my wife drew the actual line. :)

I've decrypted the demented trunk programming - I do hear alot of local agencies (found via 'src') but even manually entering published IDs (Police Call/web) I can't seem to get some I'm after.

Am I entering these right? Do Motorola Type II (Fremont, CA) systems have to be entered "in order" (-manual)?

Also, Police Call lists trunk IDs but not what frequencies do those encompass? I must be missing something here?

BTW no PC interface ouch, this radio and my soldering iron will have a chat real soon. :O

TIA!

Gary Douglas

First off, Welcome to the list Gary.

A great resource is http://www.radioreference.com/
You'll have to register before you can access the database, but
everything you're looking for is probably in there ;)

Mot II trunking systems don't need to be entered in logical order,
only EDACS systems do that. And on any Pro scanner starting on x01,
not x00.

If your soldering iron does meet with your Pro-94, please let us know
how it goes.... that could be an interesting read :)

You know, you could have got the Pro-95 for a few bucks more and you
would have the PC interface, along with Alpha tags and much much more.

If you go to the Links section of the Yahoo Groups site (http://groups.yahoo.com/group/pro94owners/links), you'll find a link to the Tandy users manual (http://support.tandy.com/support_electronics/57321.htm), as well as an edited, easier-to-read version (http://marksscanners.home.att.net/index.html).

Also, you might want to check your Caps Lock key. Typing in all caps is hard to read, and in web forums and email lists is equal to shouting.

From: Chuck
Topic: 2687 Message: 2687

my Pro-94 wasn't used for about 3 months, when I put the new batteries in everything works, EXCEPT it will not search for the talk groups & will not let me change the fleetmap. Any help greatly appreciated.

Chuck

2688. Help! Got my 1st scanner ever - Pro94. But need help to work it.

Yahoo group: pro94owners
Date: 2004-08-11 00:31:47 UTC
From: servitesoul
Topic: 2688 Message: 2688

Hello!

Please... I need assistance! I can't get this Pro 94 working, except to search for stuff, and only 2 or 3 come in! I live 45 miles north of New York City. In Highland Mills. - Harriman & Monroe are close by.

I just got it for my birthday... but am having SO MANY problems just trying to use it and program it. I can't even get the regular channels going, but especially the trunking stuff. If I let it search the police and other 'E' banks... I only hit 2 or 3 that I can hear. I am so very new - BRAND new at this, but really want to learn!

I want to do know how to trunk and program those and other frequencies. Does anyone out there have the time to help me? I cant even program the few I find to scan them later.

AlsoAny chance someone can leave a step-by-step procedure for me to follow? So I can get the trunking and regular searched and programed to scan?

I can't seem to get it at all!
I went to Radio Shack for help, and all they could say is "I dont know - read the book!". So I bought this 20$ book with all the different county numbers in it.. and it came with a disk that I guess I need a different scanner and a plug and play to use it or something. But it does have all the near-by frequencies. But I try to program them in manually and it flashes 'error' every time.
WHAT AM I DOING WRONG?

if ANYONE can help, I would be VERY grateful.
I'm so glad I found this forum. Otherwise I wouldn't have a chance!
If you can Please help me and have the time to do so -- please! I don't know where else to look for help.

- Jack Jr.

Ok

To Program This For Motorola,

Press Prog,then Press Trunk,then with the arrow Keys
Select:E1,E2-800,E2-900.Depending on what type system
they utilize,
Program all the frequencies in to the bank that you
have selected.after that press Search.
once it finds the Data channel or Control Channel.
you should be all set

For GE EDACS Same Procedure but the frequencies for
this type system have to be in a Certain order (LCN)

First frequency is the Control Channel For GE/Ericson
systems.

I Hope this info is Useful.

start off with a hot cup of joe and relax. once you get it you'll never turn back,

eddie in calif.

servitesoul <servitesoul@...> wrote: Hello!

Please... I need assistance! I can't get this Pro 94 working, except
to search for stuff, and only 2 or 3 come in! I live 45 miles north
of New York City. In Highland Mills. - Harriman & Monroe are close by.

I just got it for my birthday... but am having SO MANY problems just
trying to use it and program it. I can't even get the regular
channels going, but especially the trunking stuff. If I let it search
the police and other 'E' banks... I only hit 2 or 3 that I can hear.
I am so very new - BRAND new at this, but really want to learn!

I want to do know how to trunk and program those and other
frequencies. Does anyone out there have the time to help me? I cant
even program the few I find to scan them later.

AlsoAny chance someone can leave a step-by-step procedure for me to
follow? So I can get the trunking and regular searched and programed
to scan?

I can't seem to get it at all!
I went to Radio Shack for help, and all they could say is "I dont
know - read the book!". So I bought this 20$ book with all the
different county numbers in it.. and it came with a disk that I guess
I need a different scanner and a plug and play to use it or
something. But it does have all the near-by frequencies. But I try
to program them in manually and it flashes 'error' every time.
WHAT AM I DOING WRONG?

if ANYONE can help, I would be VERY grateful.
I'm so glad I found this forum. Otherwise I wouldn't have a chance!
If you can Please help me and have the time to do so -- please! I
don't know where else to look for help.

In the Kansas City area, Radio Shack will program a scanner for you or at least they used to. I would try calling other Radio Shack stores and explain this. I would ask for someone who knew about the scanners they sell. In my area, I called about five different stores before I found someone who knew how to program the scanners.

2693. Help

Yahoo group: pro94owners
Date: 2004-08-14 05:06:51 UTC
From: Rachael
Topic: 2693 Message: 2693

I just bought the Pro-94 a few days ago I am used to scanning with my old Bearcat. My question is how to i program a talkgroup in with only 4 digits like 4029 all posts? Or am I just not understanding the lingo or completly missing the idea. I live in Traverse City Mi. We haven't gone digital yet but are a few talk groups in the area. Please any help would be appreciated. I asked the guy at the Radio-Shack wear i bought it and he had no flippin idea. thanks.

2695. Discriminator Pin

Yahoo group: pro94owners
Date: 2004-08-15 15:52:06 UTC
From: Ryan Woehler
Topic: 2695 Message: 2695

Hey Guys,

Im trying to put in a discriminator output on my Pro-94 for use with the ATCS Monitor program.(I dont know if any of you are fimiliar with it or not) Anyway, I need to know what pin is the tap point. I also am having a hard time finding directions for what to do. Although I do know a little bit about what im doing, it would be nice to have directions and a list of parts to ensure that im doing it right. Any help would be nice.

Thanks
Ryan

I am trunking the edacs system for consumers energy i put these frequencies in
855.0375
855.6625
855.8875
857.4125
858.8625
860.3125
everything took ok i pushed trunk and now when it runs thru the channels it stops on what looks like five banks and makes dash marks -- --- am i supposed to enter something here or does that mean its working? because when i push trunk it stops on the first channel and makes awful noises.

Maybe, maybe not. When it displays the dashes the scanner is in "Search" mode which means it will lock on to whatever active talk group it finds first. "SRC" and "Trunk" should be indicated on the display when you are in this mode. However, this doesn't mean everything is correct, only that the scanner has aquired a data control channel. Do you hear anything at all after monitoring for a while in this mode?

i found this while searching around maybe this answers my question maybe not
Consumers Energy EDACS Frequencies & Talkgroups

Calhoun County Tower UPDATED
LCN FREQ
01 ---.----
02 ---.----
03 ---.----
04 ---.----
05 855.5875
06 851.2875
07 855.2125
08 853.6375
09 ---.----
10 ---.----
11 ---.----
12 ---.----
13 ---.----
14 ---.----
15 ---.----
16 ---.----
17 854.7625
18 852.1375

Yes, the ---.---- represents an LCN that is not currently used. Program your scanner to have nothing in those channels and it should trunk just fine. Looks like Consumers is planning on future frequencies.

That makes a very significant difference. All of the frequencies need to be entered in their exact LCN. Let's assume for now that you are entering this system on bank #1. The scanner channels 1-4 would be empty, 5 through 8 would contain LCN frequencies, 9 through 16 would be empty, and 17 and 18 would contain frequencies.

Make sense? Since the scanner channel 1 is the first channel of bank 1, it is also the LCN #1 for that bank. If it was bank 4, LCN #1 would be scanner channel 151.

I've likely explained this poorly but once you do it a couple of times it starts to make perfect sense. If the system isn't programmed properly into the bank you will either receive nothing or static and garbage.

For an EDACS system you don't need to (and in fact can't) as it's a different technology than the Motorola systems.

the cd only lists freqs, it dont program nuthin. the scanner program kit they sell at rat shack dont program most of the new ones anyway. try this, open the book to your county, city, whatever, press, manual, then type whatever channel ya want to program, like 001, then press program, then type the freq, include the decimal point, then enter, then program again to enter the next freq in chnl 002. i am not impressed with the 94, at all. you may want to try a pro93/95. the 93 is 500 chnnls and the 95 is 1000. also, once you know what freq is the "control" channel, it will trunk the whole system. so, entering, say, 854.6875, the cntl channel, it would track the whole system, eliminating valuable channel space.this is called control channel trunking. plus they have alpha tags to label each id and freq, good luck jack!

Trunk scanning is a different type of radio setup, like a trunked phone system, multiple groups of users on just a few frequencies. Nextel direct connect is cellular, just like any cell phone is, it's just not the typical phone call. Since it is cellular, it is illegal to listen, and blocked on the scanner, just as all other cell phones are blocked.

#1: (this was covered in a previous reply)
#2: Seperate A/B banks are handy if you travel (a= home, b= travel). If they didn't break up the banks, then you'd have 100 channels per numeric bank.
#3: I think that's why the channel cap is so high, that way you won't have to keep reprogramming the radio. Computer programming *can* be added.
#4: Only Uniden radios offer Control Channel Only capability, if I'm understanding your issue correctly.

Not being a hardass or anything, but why did you buy the radio if the 4 reasons not to buy it were obvious if you did proper pre-purchase research?

I have a Pro-93 which I'm satisfied with, but don't like the bugs with the radio. I don't plan on trading soon, but if you want to sell the 94, email me your best price as I would be interested in picking up another unit.

Thanks!

From: jmtworc
Topic: 2695 Message: 2712

Wow, it's been awhile since I've posted here, but I too have decided that my 94 is old enough and that I can play with in on the inside. I want to put a Discrim Tap in, but can't find much. I did the suggested google/yahoo searches and came up with one txt file that will probably get the job done, however I would like specific pictures of where/what to go/do. I'm pretty familiar with electronics/electrical, however I want to see actual diagrams just to verify my work. Mods.dk has been down for awhile for some reason, so I can't get anything off of that. There's one other site http://webpages.acs.ttu.edu/mmatalik/Radio/ but the images are just thumbnails and dead-links behind them.

Please email pictures to djmt99@... or upload to the files section as I'm sure it would be appreciated by other users.

Thanks!

From: Blake
Topic: 2706 Message: 2718

As an owner of both the pro-94 and the pro-95, there is no doubt the pro-95 is a better scanner. However the pro-94 does have one HUGE advantage over the pro-95. If you are looking for new talksgroups on busy trunked system, the pro-94 is totally superior. That is based that the pro-95 in open mode does not allow blocking of talkgroups. However, you can block talkgroups on the pro-94 while scanning in open mode by simply hitting the l/o button.

So when I am in the mood to scan for new groups, I use my pro-94 instead of my pro-95.

Cheers,
Blake

I'm working on writing something up right now. Basically you will need connect to pin 9 of the MC3361 using a capacitor. There is a spare solder pad near the IC that you can use so you don't have to solder on the IC itself. There isn't much room inside the case but using a SMT capacitor and small coax (RG-174 or smaller) it can be done.

2722. To pro94owners about the price of GAS

Yahoo group: pro94owners
Date: 2004-08-22 13:44:46 UTC
From: harryp10_2000
Topic: 2722 Message: 2722

Hello fellow pro94owners.
I have started another yahoo group about the continuing rising price of GAS.
I would like all of you to join up and invite family and friends to do the same, so we as consumers could try to combat this terrible growing beast or at least give it our BEST shot!
I have already added quite a few GOOD link's on the subject and believe more of the informed public would be a favor on our side as consumer's. It doesn't matter where you live in this world cause the cost is affecting ALL of us!
Here is the link to the new group:

http://finance.groups.yahoo.com/group/GasPrices/

Lets all try to get some satisfaction from this sky rocking cost's.

Tks,
Harry

Topic: 2725 Message: 2726

Someone better in math then I am, could convert this into inches. 234 / f = length in feet (f is frequency). This formula is for 1/4 wave if I wrote this down right. Using 858.000 as a midway point, I get .27 of a foot. .27 x 12 inches equals 3.24 inches.

I can't tell you exactly, but I can tell you that there are commercial
(stubby) antennas that are made for this band, although not this
specific range of freqs.

Good luck.

I am thinking that the frequencies must be secret for the fire
companys for Indian River County in Florida or I just do not know
were to find them. I have found police and others no fire companys
or dispach for engines (sugestions)?
and I get the beep beep beep as the Police talk

I am haveing trouble understanding how to program this thing I can get local police and program the XXX.XXX in but I am haveing a hard time of understand how to get my fire company on here it trunked and I am not sure do you need to program all the frecuencys in for it? I get tones for the company but no information the frecuency is 155.055 not sure what to do next and the trunk ME,M,E not sure what it is either.

Sebastian Police and Indian River County Fire are both on the Indian River Public Safety EDACS Trunked System found here:

http://www.radioreference.com/modules.php?name=TRSDB&sid=222

Follow the directions in the manual for programming an EDACS system...

Make sure you have programmed the frequencies in the EDACS trunked mode and in the first channel of the bank starting in say channel 101. If you do not program it in trunked mode or start in the channel one of the bank you select and in the order that the frequencies are listed (LCN) it will not track in EDACS mode.

On a Motorola system, you can put the frequencies anywhere in the bank providing it includes the control channel and all the frequencies in the system.

2737. Listen to ID/Talkgroups

Yahoo group: pro94owners
Date: 2004-08-29 04:57:47 UTC
From: jle102191
Topic: 2737 Message: 2737

Ok...I just bought a used already programed scanner out of a pennysaver ad. I just dont know how to listen to the codes like 1936/2032 ect. I was listening to the before and everything was great but one time when I turned it on it just scanned the normal freq. I had it scanning the regular frequencies and I hold down scan untill it beeps and then SRC untill it beeps like the manual said but that has no effect on the scanner. PLEASE HELP ME!!!!!!!!!

THANKS-THANKS-THANKS-THANKS-THANKS-THANKS-THANKS-THANKS-THANKS-THANKS

2745. Completely New

Yahoo group: pro94owners
Date: 2004-08-31 07:18:07 UTC
From: bkuzmeski
Topic: 2745 Message: 2745

I apologize for the incredible vagueness of this post. I am BRAND new to scanners and completely lost. I've read the manual that came with my PRO-94 and the online manual that is linked from this group. In either case I am finding that I don't understand the instructions and that nothing is working as described.

When I got the scanner, the Radio Shack employee set it up for me. My first question is, is there a way I can get a list in the device that indicates what he programmed?

Secondly, I can tell that he set it up for Alameda county, California, which is great. What I would also like to do is make sure that Alameda City is all in there and set up a way to toggle between Alameda county and Alameda city. I can't figure out how to do this. Anyone have any advice?

In short, this is my first scanner and few things have ever made me feel as lost as this device!

Thanks in advance for your help,

- Bob

2746. pro 94b(pc program)? and pro 95 that doesnt work.....

Yahoo group: pro94owners
Date: 2004-09-01 10:29:30 UTC
From: swimswimfish
Topic: 2746 Message: 2746

hi all.
i just got a pro94. after the model number it has 'b'.
this one also has a pc/if jack on the left side! hmm. what cable and software? it seems this one can be connected to a pc but no mention of it. is this scanner a uniden or a gre? that will go a long way as to helping me figure out what do to.

also, i tried two different pro95's. programed them properly(i am sure). neither one could receive any voice on the trunk channels in my area! they would show the frequencies as active and tracking, but 9 times out of 10 no audio on these channels! it was not a defect either. if i put it in manual the audio works fine. the pro 94 both 'a' and now 'b' models work perfectly in trunking mode.

what could cause the pro95 not to work here? oh by the way, it's edacs. and i do know how to program these. because i can get it to work fine in another county!

thanks.
ron.

An even more burning question is, is the PCB layout for this connector present as an 'artifact' in the 94a, and does the 94a microcode support access via the PC software?

I'd be willing to try the hacking on my 94a, if someone does a little legwork and digs up some more info...

i no longer have a 94a. keep in mind that the 94 is basicly a bc245.
it would be a lot easier for them just to leave the jack off the case
then to remove that print from the pcb. take it apart and look at it?
i don't know if a schematic is floating around.

right now i am going to go tap the discriminator on mine.
i paid about $105(rs credit deal) for this! what a deal. i now think
it is even better than the 95, since it is pc controlable and not
just data swap.

ron.

2753. Software for the Pro-94????

Yahoo group: pro94owners
Date: 2004-09-03 19:05:30 UTC
From: xchicago01
Topic: 2753 Message: 2753

Hello all,

Well, I've got the cable for the Pro-94, but the Radio Shack software is not compatible. Any idea as to where I might get the software for the 94?

I've found other software for other models, just not this one.

Thanks - Jim K9IDX

From: dmccorm
Topic: 2753 Message: 2754

What software did you try?

If you can get the radio into the remote mode like the PRO-2052 you could try ID Tracker, Radio Manager, Scancat software, or the BC245int software.

Is there anything in the manual about a key to press to go to remote mode? On the PRO-2052 you press the remote key, the BC245XLT you press and hold the enter (E) key for about two seconds.

Someone posted on another board that when you plug the cable into the interface port you get "wired" on the display, but he was trying to use the GRE Win96 software when he got the message. The PRO-94 is a Uniden radio not GRE.

The BC245XLT/BC895XLT/PRO-2052 should be close in control commands. The Police Call CD-ROM has a program interface built in for the PRO-2052, you could try that if you have it.

2758. Re: Software for the Pro-94????

Yahoo group: pro94owners
Date: 2004-09-05 17:09:42 UTC
From: xchicago01
Topic: 2753 Message: 2758

Hey,

Thanks a lot for the suggestions! I exhaust all my options before giving up and returning the cable.

It's really a pretty fine radio and if there's a way to take advantage of this option, it would be all the better!

Regards - Jim K9IDX

So can u or can't u program the Pro-94a bye a computer? I'm not real good at taking things apart so I would have to find someone to do it for me. And if it can be done is there a program and a cable? And can u unblock any of the frequencies with the program? Also when it comes pre proggramed who does that Radio Shack? Cause mine is way off. Can it be changed?

No, you can't.

RadioShack does the programming...you can change it yourself by
following the instructions in the manual...

24LC64T - IC205

Green circle - Pin 3 SDA
Yellow circle - Pib 6 SCL
Blue circle - Pin 7 Write protect
Red circle - Pin 5 SDA
Purple Circle - Pin 6 SCL

Schematic:
Red circles - Solder both tohether
Green bars - Cut the traces
Blue circles - Connect one to ground and connect the other one to a relay

In order to read and write to the EEPROM you must lift pins 5, 6 and 7 of the 24LC64 off the circuit board. To program it all you need is pin 5 (SDA), pin 6 (SCL) and a ground connection such as pin 4 on the 24LC64.
From there you need to decide for yourself on how you will gain access to these pins from outside of the radio.
You also need a DPDT type switch to toggle between the EEPROM and a computer with the EEPROM as your "common" on the switch.

Since there is a very little room in the PRO-94 and I use rechargeable batteries I decided to use the switch inside the battery compartment to turn on/off a very small DPDT relay. Doing it this way avoided an ugly switch on the outside of the radio and a nmormal DPDT switch is too big to attach on the outside anyway.

In order to use the internal bettery switch you need to cut two tracws on the board. If no rechargeable are to be used then just cut the traces and leave them as-is, otherwise you must solder a wire between the two Red circles in the above schematic. From here you are on your own as to where you decide to place your relay inside.
My relay was small enough to fit on the top circuit board near the antenna along with a female stereo phono connector to easily attech there wires to an I2C programmer. such a programmer can be fund a www.diday.com along with free software. or you can use the software and make your own programmedr. The schematic and software can be found at www.lancos.com.

When you want to program the radio you must first anter in all your frequencies by hand. After you are done programming it turn the radio off and switch the EEPROM over to the computer. Turn the radio back on. You should see "clear" flash by very quickly on the radio.
From here you will use the computer to read the EEPROM. Once read you will save the information as a hex fiel under a name of your choice for later reference.

When your want to load a file into memory all you need to do is load it into the software, turn on the switch to connect the EEPROM ro the computer, turn on the radio and then "write" the file to the EEPROM. After you are finish turn off the radio, turn off the switch and then turn the radio back on.

Your scanner will now have a new set of loaded frequencies. You no longer have to take an hour to reprogram your PRO-94, have fun.!!

I know I don't want to modify anything. I just wnat to be able to
download freq? I have 94A with side plug for PC cable, it can clone,
so shy doesn't someone create a program for it. ED

I do not know if it actually exists.. RadioShack's website doesn't list it, but I have heard of a Pro-94B that includes a PC/If jack. This would mean computer control, but again, I haven't found any official supporting documents. Also, I know this scanner is made by Uniden, but some places have it listed as a Realistic brand scanner.

WA4RF - I have found the Pro-94 to be a bit cumbersome to program as have many others. However I also discovered that Radio Shack has a link that has full photographic tutorial on how to do just that.

http://support.tandy.com/support_electronics/doc67/67350.htm

http://support.tandy.com/support_electronics/68857.htm as PDF.

My second complaint was that the audio was pure garbage out and unintelligible.

My solution was replacing the speaker inside with the smaller Radio Shack number 273-092 8 ohm 11/8" diameter speaker.
Then I just filled around the outer edge with plumbers Goop Marine type to seal the remainding space. The result is remarkably better audio response in that the range is 300Hz-8000Hz, which is almost twice the range of the original speaker.

73' good luck

From: scottgilliamtbc
Topic: 2787 Message: 2787

I have a Pro-94 (94A I think) and I haven't ever been able to monitor the Tulsa/OK State trunked system in trunked mode here in OKC. Oklahoma Highway Patrol uses the system here in OKC and I can hear it fine in conventional mode -- but it's an EDACS system. Does anyone live in OKC who has successfully programmed this system into their scanner? Thanks. Gilligan

2788. PRO B? A?

Yahoo group: pro94owners

From: Ed Tolley
Topic: 2788 Message: 2788

I posted some pictures of my PRO 94 on the photos sectioon of this board. They show among other things, the front of my 94, the back which shows the white sticker with the date and year of manf, plus the desgination A. 08A04 which means made in august of 04 and it is a model A. Then take a look at the catalog number above the serial number. It ends in a B. Also I have a shot of the side of my 94 which shows the PC/IF jack for computer hookup.Rick Springer from Scan Cat Gold, the Company that RS uses for its download software for scanners, emailed me and said that there would be a "software program for the PRO 94 in about 30 days". That was about a week ago. So heads up on that.

2789. RE: [pro94owners] PRO B? A?

The 'A' in the date code does not mean that is a Pro94-A. The designation is based on the catalog number above the serial number on the sticker on the back of the scanner. Your radio is a 94-B.

>>> I have a Pro-94 (94A I think) and I haven't ever been able to monitor the Tulsa/OK State trunked system in trunked mode here in OKC.<<<

Doubt you will hear a peep from T-Town in the city which is aprox 90 miles. My son lives high on a hill aprox 35-40 miles (as the crow flies) from Tulsa and doesn't hear anything in Tulsa. The Tulsa Motorola system has 30 channels but there are some obsolete freq lists floating around that just show 20 freq's that can cause a problem even when monitoring locally.

I change antennas often on my `94 and have noticed the antenna connector loosenig up more and more frequently. (Female conn. radio end) I have had limited success tightening the fastener with small screwdrivers ,pointed probes etc. but they result in 1. poorly tightened connector. 2. bent tools (3 each) and 4. Punctured thumb/fingers (3 assorted). RatShak has no tool listed for tightening. Anyone else have this prob. ,Anyone have a solution ?

The 'correct' tool is basically a metal sleeve with two protruding notches that mate to the nut. They are ridiculously expensive. Check your telephone listings for radio shops near you, if you are lucky one might let you use theirs for a few moments for free. Or perhaps a local ham radio club has one you can borrow. I believe I still have the information sitting around from when I was looking for one, if you would like I can send it to you.

However, usually a pair of small screwdrivers is more than sufficient to tighten or loosen the nut. The next time it becomes loose you might want to remove it all the way. Check for damage to the threads or to the flats on the radio case.

2795. Newbie help....

Yahoo group: pro94owners
Date: 2004-10-01 11:16:53 UTC
From: Ken Bessler
Topic: 2795 Message: 2795

I just got my '94 and the manual I d/l'ed
was not very clear on this issue:

I have banks 1-7 programmed with conventional
freqs and bank 10 programmed with the Sedgwick
Co, KS (Wichita) Motorola II system. I also have
4 misc. 800mhz freqs programmed in that bank.

Everything is working right but the scanner dosen't
skip the trunking freqs when in conventional scan.
It'll scan banks 1-7 then 10 then go into trunk mode
and scan the talkgroups then start over.

Problem is if there is traffic on one of the trunk
memories it stops there, too both in trunk scan and
regular scan

In my old Bearcat I could fix this by locking out
the trunking freqs but with the 94 if I do that it
stops trunk tracking.

Help! All I want the scanner to do is skip those
20 freqs during the conventional part of a scan.

Also, is there a way to get the '94 to do a trunk
scan only? (no mixed mode aka trunk/conventional)

Ken

2796. Oops! Nevermind...trunking/conventional problem

Yahoo group: pro94owners
Date: 2004-10-01 15:08:33 UTC
From: Ken Bessler
Topic: 2796 Message: 2796

I figured out why my '94 was scanning the trunk memories in both trunk mode (as talk groups) and conventional (as memories)....

I had accidentally entered the first 4 freqs as standard freqs, not trunk freqs. I noticed a lack of a "M" next to the first 4 freqs.

A little reprogramming and all is well...

God, I feel dumb!!!

Ken

2797. RE: [pro94owners] Newbie help....

Yahoo group: pro94owners
Date: 2004-10-03 15:01:41 UTC
From: steven dawkins
Topic: 2795 Message: 2797

If you want to scan only conventional...turn bank 10 off, by pressing "0" while scanning. If you just want to trunk scan... turn your 1st seven banks off, by pressing the numbers, while scanning. but first go to conventional scanning by pressing "trunk".

Ken,

You can lock out the control channel and monitor it in
conventional scan
when in trunk,the control channel is found regardless.

>>> how much traffic will you miss when you lock out the control channel and scan conventional?<<<

Probably depends on the size of the Dept/system you are monitoring. I live in a mid sized city (Tulsa) and it uses a 30 channel Motorola system and if my scanners didn't trunk I'd get rid of them. I tried keeping up with things with my old 2006 for a while and it worked pretty good late at night but there was no way during the evening or day. RM~

2804. Pro-94 version 1.05 Is it ok?

Yahoo group: pro94owners
Date: 2004-10-07 23:59:41 UTC
From: kf4lfd@yahoo.com
Topic: 2804 Message: 2804

Hello Pro-94 owners group. I recently picked up a Pro-94 new
from radio shack.
I'm trying to listen to the Pinellas County, Florida
Motorola Type IIi 800 MHz system. (Does anyone know what the
small "i" after the TYPE II means?)
This is my first trunking scanner, though I have been
a scannist for more than 15 years.
I will admit to not being the brightest of sorts, but
I thought I could just follow the manual and the
scanner should function correctly.
I found out about the 492 buttons trick and discovered that I have
the 1.05 - 4A 94H version.
I've also tried programming other banks for other systems like edacs
and still run into problems getting to the talk group identity
numbers.
I run into a problem after I have completed step 5 of
page 41 of the manual.
When I press scan then SRC as instructed I expect to
see ID Group numbers but the scanner just continues to
scan through the freqs.
Apparently the scanner is not finding the controlling
data channel and though the display shows trunking
apparently it is not.
Do I have the wrong freqs entered. Can I trust the freqs that are
listed in the accompanying book?
Are any of the freqs listed online legit?
Also, I've tried to access the S-Bit by holding down
the scan button for a second and all I get is a couple
of beeps in quick succession.
Sorry to be so long, but is there a possibility that I
got a defective unit or just an older version that doesn't work as
the manual says it should or am I missing something.
I would REALLY appreciate ANY help.
I will continue to monitor this group but please feel
free to email me at kf4lfd@....
I have more questions, but I'll give it a rest.
Thanks for reading this.
Tom

Ok thanks for that one. It helped. I was able to get the scanner to actually trunk and was able to see the talk group screen but didn't have time to program it further as I had to go to work.The weird thing is when I took the scanner to work with me this AM, it would not trunk again??
I'm going to reprogram it again after din din and hopefully will get it to work again.
Thanks for the link. I do appreciate it.

2810. 492 button trick (was Pro-94 version 1.05 Is it ok?)

Yahoo group: pro94owners
Date: 2004-10-08 21:49:18 UTC
From: kf4lfd@yahoo.com
Topic: 2804 Message: 2810

I can't remember where I saw this trick, but it's on the web
someplace.
It will tell you the firmware version and some other info which I am
not sure what it is.
The trick is:
Turn scanner off then turn back on while
holding down the 4 and 9 and 2 buttons and the info comes on the
screen for about 4 or 5 seconds.
And while I'm thinking of it, are there rules here about top posting?
Thanks for all the help too.

From: kf4lfd@yahoo.com
Topic: 2804 Message: 2811

Hi again. I'm quickly on the road to discovery here. I have the scanner trunking and am trying to figure out which talk group ids are worth listening to.
Apparently I mis-entered the freqs numerous times and once I got them all entered right everything appears to be working fine.
I've got a lot to learn.
Thanks to everyone for the help and the various links.
BTW I'm sure most poeple are aware of this, but if not...
Radio Shack has the PRO-94 on sale for 119 bucks right now.
It's bound to go lower I'm sure, but I got this one for less than 130. including tax. You can also order them from the website.
I'll continue to monitor this group and look into the tampabay group.
Thanks again everyone.

2812. Trunking Help

Yahoo group: pro94owners
Date: 2004-10-10 01:16:18 UTC
From: iastdance2000
Topic: 2812 Message: 2812

I just purchased a pro-94 the other day. It is my 3rd radio, but my first trunking radio. I am clueless, despite reading the manual numerous times. I need some help, greatly.
I am in the Roanoke Va area. They use type I.
I have no clue how to program in 100-0 - Fire & Rescue Dispatch
100-1 - Fire & Rescue TAC 1
100-2 - Fire & Rescue TAC 2
100-3 - Fire & Rescue TAC 3
100-4 - Fire & Rescue TAC 4
100-5 - Fire & Rescue TAC 5
etc.
How do i put in the 100-1. I have the frequencies in, but i am clueless when it comes to fleet maps and id's.

The rest of the system uses type II and I have no clue how the
58368 to 58879 - Vehicle Maintenance?
59904 to 60415 - Water Dept.?
65104 - Airport Maint. & Security
works.

I have AOL instant messenger- iast dance (with an i), if it would be easier for anyone to help me step by step that way.
I am totally new to trunking, despite being a listener for about 10 years.
All help is greatly appreciated.
-Mike

It is A Motorola E1 System just by looking at the
talkgroups

Try that see if that works,because the id's show up
when the mic is keyed.

2816. to Squelch or not to Squelch

Yahoo group: pro94owners
Date: 2004-10-11 01:38:36 UTC
From: jeff
Topic: 2816 Message: 2816

My Pro-94 sits in the car next to an AOR8200. I drive through an area with hideous interference or intermod (or internet, I don't know). All I know is that I get all sorts of noises and two conversations on every frequency.

The AOR's squelch can be adjusted to the point where the noise stops. The Pro-94's squelch seems like it could be easily replaced with an ON-OFF switch. It will kill background noise but nothing more.

Is this common?

2817. Re: [pro94owners] to Squelch or not to Squelch

From: Mike
Topic: 2816 Message: 2817

It sounds like a combination of intermod and front end overload. It is common to all radios, but scanners are particularly sensitive to it since they have such wide front ends.

The first thing to do is identify the source of all this RF. As you drive through this area do you see any towers? The worst offenders are usually TV broadcasts, commercial FM broadcasts, and pager transmitters. Since the TV and FM portions of the spectrum are excluded by the 94 they are less likely to be the problem (though it is not at all impossible.) Since the AOR has an S-meter and attenuator your job will be easier. Turn on the attenuator and scan through 152 to 153 and 454 to 460 MHz, these are the pager allocations that usually cause the problems. These are only starting points, scan around and identify the very strong signals. You may even want to remove the antenna to exclude all but the strongest signals.

Once you have identified the frequency (or frequencies) that is causing the intermod, the next step is to notch it out. If you are lucky the problem is a pager tower. There are many products available that notch out the two bands I mentioned earlier. If the problem is elsewhere it may require either an external attenuator or constructing your own notch filter.

2818. Antenna/scanner sensitivity

Yahoo group: pro94owners
Date: 2004-10-11 02:42:12 UTC
From: Robert
Topic: 2816 Message: 2818

For the last few years, my Pro94 has had poor quality receive. When sitting in my Explorer, it does not receive worth a crap....regardless of how close I am to a transmitting site. And, at home the receiver's better (once I'm out of the metal structure of the Explorer). But, not much better. I can rotate it sideways and even upside down and receive better than straight up.

I have dismantled it and checked the connection between the BNC connector and the board. It's secure and making good contact and shows no loss via a meter. The last time I took it by Radio Shack, a few years ago, they decided there was nothing wrong and it working the same as any of their other scanners.

But.....I can program the same PD frequencies in my Icom W32 (ham handheld transceiver) and get a lot better receive. The W32 should not have near the sensitivity in the 800mhz range as the Pro94. My old 2003, 2004 & 2005's worked 10 times better than the 94. Granted, they are base scanners.

The only thing left is to "trust" RS's technical repair shop (yea....right) to see if there is a problem with the receive. I fear that after they claim it's working fine, I'm stuck with the cost to take a look at it.

Robert

There is software for it called Scanlite Pro at http://www.scancat.com/scancat-lite-plus.html. The only problem is they have not set up the Pro94 for it yet, but plan to, so I am told. Radio Shack had just received it the day after I bought mine, but had no copies to sell. It was just the store version so they could program the things for customers (except mine).

I have never understood releasing something, marketing it then it not have it ready for the customer, oh well. So I guess we just wait. I obtained the software but it is not compatible yet. It almost worked with modified 96 settings, but I received an error.

From: Rocky_Beech
Topic: 2825 Message: 2825

Hi guys,
Like some others I just purchased a Pro-94 and am new to trunk tracking.
I live in Seminole County Florida and have programmed in the
frequencies. I can only assume that the fleet map is defaulted like
the squelch since it is a Motorola II system. BTW what is meant by
Motorola IIi in the frequency guide?
It is not clear to me what is supposed to be shown on the screen when
the unit is trunk tracking correctly. Is it the frequencies or 4
digit codes? Am I assuming correctly that these are the talk group IDs?
The last question for tonight is that there are two channels that seem
to have noise on them and they just hang for several seconds before
going to the next channel. Any solutions? can these just be deleted?
Thanks guys,
Rocky

Tom,
I just bought mine today and I was running into the same problem with the instructions on page 41. I then tried 1 through 3 on page 42 and somewhere in there it started to work...at least I think it is working. I am not sure if the word "SEARCH" is supposed to be visible but it is scanning and what looks like ID # are visible. I too am new and wonder what the "i" stands for.

Hi Russ.
My problem with programming was human error. I entered wrong freqs
and omitted others.
My vision is none to good even with glasses.
I've not programmed in nearby counties that are on edacs systems as
I'm happy with what I am currently listening to here in my own county
on Type II.
As has been exrpessed here and on various websites it helps to read
the scanner manual about 25 times. It surely could have been better
written.
One website that someone here suggested is
http://www.radioreference.com/modules.php?
name=Content&pa=list_pages_categories&cid=1
It is a good site and has links to many other good ones.
Hope you got yours at a good price.
I am using mine with an external, though not very high 1/2 wave
vertical antenna and it works much better than the stock rubber
antenna.
My only complaint is
no alpha tags, and excessive bank size but overall I'm happy with
the scanner.
Tom

Hi Rocky. I'm in Largo and listen mostly to LPD and County fire.
You should be seeing the talk group ID's if the scanner is trunking.
Don't lock out the data channels as those are the control channels
and the scanner will not trunk if you lock them out.
Check your freqs to make sure you don't have ommission or wrong freqs
entered.
I didn't think the MIIi system used fleet maps, but I'm really new to
this as well.
What is the main agency or agencies you want to listen to?
Email me directly if you want.

I don't know about what your scanner came with, mine is only two days old and it's my first (actually for my son)... I found http://support.radioshack.com/support_electronics/doc57/57987.htm to be a __tload more helpful than the manual - the scanner came with - as most of it seemed to assume I knew "scanner speak".

Rocky_Beech <rocky_beech@...> wrote:

Tom,
I just bought mine today and I was running into the same problem with the instructions on page 41. I then tried 1 through 3 on page 42 and somewhere in there it started to work...at least I think it is working. I am not sure if the word "SEARCH" is supposed to be visible but it is scanning and what looks like ID # are visible. I too am new and wonder what the "i" stands for.

This must be an older document. It states, " Your scanner cannot scan
trunked system and conventional frequencies at the same time" which applied
to older Pro 94's. The newer models do scan trunked and conventional freqs
at the same time. RM~

Hi Tom,
Thanks for the response. I have a master's in
elelctrical engineering and this has me somewhat
baffled up to now. I write manuals sometimes for my
work and this one is really poor, if you ask me. But
I will persevere. I am wanting to listen to just the
police department in Seminole county but may want to
put the other services on another bank. I am not sure
I understand how to do that. Are the services
separated by frequency or Talk Group IDs?
BTW off the group my real first name is Russ and I
spent my first four years in Key West and most of the
rest in Miami or here in Orlando area.
Thanks again,
Russ

Hi Vern. It's not really a trick. You simply turn
off the scanner and then turn it back on while holding
down the 9 and 4 and 2 buttons simultaneously.
The display will show the firmware version.
A second number is displayed after the firmware
version, but I am not certain what that number is
associated with.

2838. PRO 94B PC Interface (Good news?)

Yahoo group: pro94owners
Date: 2004-10-19 06:04:56 UTC
From: John Kamer
Topic: 2838 Message: 2838

I contacted Radio Shack regarding the 94B software and cable, here is the question and response:

Having been sold this scanner after asking for PC interface

capabilities, it turns out it's not capable. What gives? It has a port

(PC/IF), the manual references it, and your website has recently pulled

info about this function. What's RS policy, just ignore/coverup and the

problem will go away? The internet message boards are hotly discussing

this, and I want to know if this capability is ever going to be

addressed? It's like buying a car with a CD player, but it won't play

CD's!

Radio Shack Response:

The PRO-94, did not have a computer interface; however, the PRO-94B will use 20-289 cable. We are currently working on software development. We regret there is no estimated time when additional information or the software will be available. While it has not been confirmed, we have requested and are hoping ScanCat Lite will soon support this scanner.

Sounds like a bunch of BS, personally. The 20-289 is a GRE cable. Why would a GRE cable be used with a Uniden scanner? Why wouldn't they use they already existing Uniden cable, of which most stores currently have three or more in stock. Even if the software were incompatible, the 20-048 scanner programming kit would make more sense. Oh, and by the way, has anoyone with a 94B tried Uniden's E-Scanner Plus programming software? It probably won't work, but it would seem if anything might work, it would be this.

2841. Can't Find Replacement Volume Knob

Yahoo group: pro94owners
Date: 2004-10-24 02:55:41 UTC
From: megahertz440
Topic: 2841 Message: 2841

Anyone know where to find a replacement volume knob for a Pro94?

I went to my local Radio Shack and they called their service department. Service told them it was out of stock and a discontinued item!
However the store had units on the shelf for sale!
I tried unsuccessfully to talk the guy out of swaping the knob of their display model but no luck.

Anyone with a source or ideas??
Maybe I need to try my luck at a different store.

Scanning in San Diego, CA

2842. Ericcson LCN Tricks

Yahoo group: pro94owners
Date: 2004-10-24 03:55:03 UTC
From: Joe Giraudo
Topic: 2842 Message: 2842

Anyone got any tricks on getting Ericcson system chanel in the proper Logical Channel Number order? Are they usually set up in numerical order ie. 865.2125, 866.2125 etc? I'm new to non-Motorola Trunk Tracking

I have been monitoring public safety since before scanners, (when the Bearcat was a convertor you placed next to an AM radio).

Thanks...

Joe

That's interesting, because they're still making them.
I'll bet you they'd fix it for you if you sent it in,
though!

> However the store had units on the shelf for sale!
> I tried unsuccessfully to talk the guy out of
> swaping the knob of
> their display model but no luck.

Why would they do that? Then they'd have a bad model
in stock...

> Anyone with a source or ideas??
> Maybe I need to try my luck at a different store.

You can try a different store, but if they call the
same service center, then they'll get the same answer.
I'll bet that if you send it in, you'd have no problem
getting it fixed...

>>> Service told them it was out of stock and a discontinued item!<<<

Call them your self, don't ask for knob for Pro 94, ask for actual stock number of part or knob for actual stock number of a Pro 94.
Surely someone has screwed up, probably the nitwit behind the counter at RS.
I could be wrong but I was thinking that by law they had to supply parts for X number of years after they ceased selling a product. RM~

The logical channel sequence is not always in numberical order. The only way I know is to get a book that lists the frequencies or there is usually a local website that lists the frequencies and the proper order.

i am yet to see a system that aint in numerical order, edacs or motorola. usually in accending (going up) order. if there is a system that is all goofy like that, i wanna see it. oh yea, it must be programmed in channel 001, not 000.

d_kellams <d_kellams@...> wrote:

The logical channel sequence is not always in numberical order. The only way I know is to get a book that lists the frequencies or there is usually a local website that lists the frequencies and the proper order.

The Lincoln, NE EDACS is not in numerical order. The system initially consisted of 10 channels, and 10 more were added in a later phase of the project. I should know, I installed parts of that system. Under the watchful eyes of GE field engineers, no less....

Joe,
Which system are you trying to program? Are you trying to program the State of Nevada EDACS system up there in Elko County? Or the NHP system? I just looked through an old Police Call (2001) and it only shows a handful of 800mhz repeaters up there. What're you trying to get?

73,

The only system I know of up here now is the State of Nevada shared one. This system is used here by NDOT, and DOIT, (microwave radio guys). There are currently two sites in Elko, (Elko Mtn. and East Twin Peak). NHP is still on 155 mhz up here. We can hear the entire rural portion of the state, (all the way to Tonopah), on this system. Understandably, the trunked system gets very quiet after usual business hours, so monitioring the system is difficult for me as I work out of town during the day. I still haven't figured out is I have the system properly installed.

Thanks...

The PRO-94 will not scan trunked and conventional at
the same time.
The PRO-94A will.
The PRO-94B added a PC/IF port for future use.

None of them, that I know of, will alert you to
duplicate frequencies...

2856. just got this from scancatlite

Yahoo group: pro94owners
Date: 2004-10-28 20:03:26 UTC
From: bockstan
Topic: 2856 Message: 2856

Beginning November 1st (Monday) we will start shipping our Scancat-Lite-Plus with support for the PRO-94B Radio Shack 1000 channel trunking Scanner. For the past few weeks, we have been accumulating "future orders" so please be patient. First orders placed will be first orders shipped.

If you place an order prior to November 1st, if it is for PRO94 Support, please let us know at the time of placing your order so we will be sure to ship you the correct version.

We have had a tremendous number of calls of calls asking when we will be supporting this Radio. Currently it is on sale at Radio Shack for $119.95, making it one of the lowest priced trunking radios in the scanner market. If you buy this radio, make sure there is a PC/IF jack on the right side of the radio. If not, it is the "Older Model", and cannot be used with a PC. AND - please make a note that this radio uses the 20-289 cable (Off White color).

If you have purchased Scancat-Lite-Plus in the last 90 days, you can contact us for a no charge upgrade.

If you want a new CD, there will be a nominal $5.00 Shipping Charge.

If you wish instead to have a link sent to you (No CD) then there will be no charge for upgrades of purchases made after August 1st, 2004.

Standard Upgrade pricing will apply to older versions.
You can view all of our upgrade policies at:
http://www.scancat.com/upgrades

If you purchased from Computer Aided Technologies, please give us your full name and address. If purchased from a dealer we need proof of purchase (if you have not registered your program) - such as the dealers name and their invoice number. You CAN register on line now at:

http://www.scancat.com/register

If you have not purchased Scancat-Lite-Plus - you really should take a closer look. It is still just $29.95. This program has grown to support over 15 of the most popular scanners in the industry... all in one program and with ALL radios capable of sharing a common database file. This makes Scancat-Lite-Plus an extremely good value. NO ONE has such a versatile program - and - no one supports more than one or two radios per software product.

Go to this URL for more info:

http://www.scancat.com/scancat-lite

2859. RE: [pro94owners] duplicate freq alert

Yahoo group: pro94owners
Date: 2004-10-29 05:12:21 UTC
From: Results Not Typical
Topic: 2846 Message: 2859

Right. I meant, in general. Generally, you won't see a
dupe freq warning....

2860. Pinout for computer interface

Yahoo group: pro94owners
Date: 2004-10-29 18:11:54 UTC
From: Joe Giraudo
Topic: 2860 Message: 2860

Does anyone know what the pinout for the Pro-94B computer interface cable is? I assume the plug is a stereo phone plug, (tip, ring, sleeve). I hate to spend $30.00 on a simple cable that I can build. I don't recall seeing the configuration in the manual. BTW, I just ordered the ScanCAT lite for this radio. Maybe I'll have better luck with the Ericcson system programming via computer.

Thanks...

Joe - N7JEH
http://www.qsl.net/n7jeh

2861. Re: Pinout for computer interface

Yahoo group: pro94owners

From: russc92004
Topic: 2860 Message: 2861

I came across the page listed below which has a lot of info on cables for the Pro 95. Which of course uses the same RS cable 20-289 as the Pro 94B. Be sure to check out the "Build it yourself" section and Bill Petrowsky's cable design.

http://www.starrsoft.com/software/Win96/Cables/cables.html

Happy scanning
russc92004

2864. FS 2300 Mah Nimh's & RS charger - cheap!

Yahoo group: pro94owners
Date: 2004-10-30 15:20:03 UTC
From: Ken Bessler
Topic: 2864 Message: 2864

I have 4 2300 mah Energizer Max Nimh
rechargeable AA batteries, the Radio
Shack wall wart charger specified for
the PRO 94 (RS # 273-1767) and the
adapater plug "H" for sale.

The batteries have seen about 8-10
hours of use and have never been taken
below 65% charged. They and the charger
are about 4 weeks old.

The charger is MINT in it's original
box.

All together this package cost me $30.

I'll sell with FREE 2 day USPS Priority
Mail shipping (CONUS) for $14.95.

I take Paypal payments to: kg0wx@...
or contact me at that email for an address
to send a USPS money order to.

Ken Bessler

How do I shut off the beeping sound when on scan and it finds channel?

Its driving me crazy..

thank you

2873. RE: [pro94owners] scan beeping?

Yahoo group: pro94owners
Date: 2004-11-06 17:42:58 UTC
From: Glen Tubbesing
Topic: 2872 Message: 2873

What beeping sound? The only beeps I get on my Pro-94A is when pressing the keys. That gets turned off by holding down the L-Out/S/S when you power up the radio. If you're hearing beeps, maybe you're listening to a trunking system, but you're not in trunking mode.

73,

> I just asked this question on the Pro 95/93 users group and got the
following explanation. I am answering because I think I understand
the response I received. I have not had a chance to implement the
answer so I am working from limited knowledge. Forgive me if this
answer is not correct. I am definitely not an expert.

The beeping sounds that I have experienced are infrequent but
annoying when they occur. They occur for me while scanning a trunked
Ericson system and I think they have also occured on a Motorola
system but cannot say for certain.

The explanation given to me is that it is probably a digital
transmission of some kind. There should be a talk group id
associated with the transmission.

The only way to avoid this is to lock out the particular talk id that
is transmitting the annoying sound.

I understand your problem for I have noticed it also. I have found no way to shut it out also. I have it happen on a 2m repeater. Every transmission ends with that little beeping chirp. I too am curious if there is a way to eliminate this without blocking a frequency. The 2m repeater I have this happen to is also the spotter repeater. This part of KS they are more reliable than the NOAA broadcast. I realize this may be sommething I will have to live with.

I have not had a chance to implement the answer so I am working from limited knowledge. Forgive me if this answer is not correct. I am definitely not an expert.

The beeping sounds that I have experienced are infrequent but annoying when they occur. They occur for me while scanning a trunked Ericson system and I think they have also occured on a Motorola system but cannot say for certain.

The explanation given to me is that it is probably a digital transmission of some kind. There should be a talk group id associated with the transmission.

The only way to avoid this is to lock out the particular talk id that is transmitting the annoying sound.

On an amateur repeater, the beep is a "courtesy tone". The controller has a timer in it to keep one transmission from monopolizing the repeater for a long time, for various reasons. The beep signals users that the timer has been reset by the RX squelch going closed, and the next transmission can start. Courtesy tones have also been used with SSB transmissions over the years (think "roger beep" on CB) to signal that the transmitting station is done. This seems very practical and logical to me, since there is no carrier with SSB and it is sometimes difficult to tell, but the idea never seemed to catch on with the ham community.

In commercial installations, it is a control tone of some sort. Commonly, it is a "Squelch Tail Elimination" (STE) tone, to allow recievers that are so equipped to close the squelch before the transmitter drops. This eliminates that burst of noise (squelch tail) that you always hear, most often improperly placed, on TV cop shows when they use radios. STE can also be done by reversing the phase of the CTCSS tones when the RX drops, by various other methods, or with a combination of methods.

This is your trivia for the day....

One of the trunking systems I monitor here in Las Vegas is an EDACS system, and if I'm not in trunking mode and listen to their frequencies, I will hear a series of 4 or 5 beeps at the end of every transmission. If you're hearing these beeps, your radio may not be in trunking mode, or it has been incorrectly programmed for this system.

2881. PRO 95 on sale @ Radio Shack $149.99

Yahoo group: pro94owners
Date: 2004-11-21 11:20:51 UTC
From: harryp10_2000
Topic: 2881 Message: 2881

High-performance, extended coverage scanner has the ability to scan
both trunked and conventional channels at the same time. It has 1000
memories□arranged in 10 banks of 100□and 1000 ID memories that can
display your text entries for easier identification of frequencies.
The triple conversion circuit and switchable 20dB attenuator cut
image-type interference. The display provides four lines of 12
characters and has a push-button backlight with programmable on
time. You can search preset non-trunked police/ fire, marine, CB,
Ham and VHF-air frequencies for activity. Extended coverage includes
CB (AM), 220MHz and 1260MHz Ham bands. Weather alert sounds an alarm
and the display indicates level of alert. PC interface permits
computer control (software not included) and easy memory cloning
with another PRO-95 scanner (cable Cat. No. 42-2420 1/8" mono to
1/8" mono plug, extra).

So aside from the dual scanning, alpha tags, and computer programmability,
are there other major differences between the 94 and 95?

It's really tempting to pick one up now, esp since eBay has them as low as
119 for a new one.

I think that's about it, but I don't have a 94.
Doesn't it have only one bank of 500, as opposed to two?

I believe the 95 shares the 94's inability to change modes (AM/FM) at
will.

That aside, the plusses make it a more desirable scanner than the 94, at
least to me. I'd love alpha tags alone.

2887. Re: [pro94owners] PRO 95 on sale @ Radio Shack $149.99

Topic: 2881 Message: 2887

I agree with the sensitivity being better on the 95.
However, one thing I like about the 94 is that you can run an external speaker off of it w/ out an amp. With the 95 it sounds muddy unless you have an amp.

The main plus to the 95 is that you can listen to both trunked and conventional at the same time. May not be a big deal to you, but here where I live it's about 50/50 trunked vs. conventional and I hate missing things.

The PRO-95 is 1000 channels broken into 10 banks of 100.

The PRO-94 is 1000 channels broken into 2 banks of 500, then broken into 10 banks of 50. You can't scan all 1000 channels at once...

The PRO-95 will change modes on any freq you want. A simple press of the MODE button does the trick.

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

ive have a pro-94a and had a pro-95. the main things i liked about the 94
over the 95 are: the auto-light feature, and the ability to trunk search
for id's while locking out id's you didnt want (ie; ambulance, fire, etc
when u just want to hear the cops and rarely used police id's) I found this
wasnt possible with the 95, as it allows u to search but u cant lockout id's
during a search, but you can program just want you want in to it like the
94. if that is possible with the 95, i never found how to do it. also, the
pro-94 seems to scan thru the channels faster than the 95.
these alone were the deciding factor in my decision to sell my pro-95. i
picked it up at a police auction for 60 bucks, and got 122.50 out of it on
ebay, so it was a wise and profitable learning experience for me.
many people do like the 95 better because of the alpha tagging capability,
but really, once u get used to seeing the same digits pop up on the screen
time and time again, theyre not hard to remember who is who.

2890. Review of the 94B Software

Yahoo group: pro94owners
Date: 2004-11-29 18:48:40 UTC
From: xchicago01
Topic: 2890 Message: 2890

All,

Let me tell you all that my head is spinning after buying the Scan Cat software for the 94B.
If you have the "B" and have been wondering whether or not to buy the software, I recommend the purchase.
I've never had a programmable scanner and until yesterday, I just programmed through the keypad.
Last night, though, after I got everything working, I was able to download ALL of the IL State freqs in a matter of minutes. Not to mention ALL of the local freqs, too. No more picking and choosing because I didn't want to go through the tedium of punching all the numbers and reading the tiny letters in the Police Call book or staring at the Police Call CD on the screen.
Now, I just choose a town on the Police Call CD, export it to Excel, have Excel remove any dupes and then cut and paste right into Scan Cat.
Guys, it's insane not to have this if you've never done this before.
If you are seasoned "cloner (or whatver it's called)," then you simply know what a relief it is to have this option.

Yes, you can use the software for the 95 as well. Go to
www.scancat.com and it will explain everything you need as well as
the serials numbers of the cables from RS.

2895. Re: Software for Pro-94????

Yahoo group: pro94owners
Date: 2004-12-01 03:07:01 UTC
From: xchicago01
Topic: 2892 Message: 2895

If you have just recently purchased a 94, it is possible that you got one of the old 94A as opposed to the 94B which has been out for several months now.

If you just purchased it new, I would take it back and tell them you want the "B", for the same price, which is the one that is out now, with the interface jack on the side.

All the programming details that you will need are at www.scancat.com

2896. PRO-94B Software Protocols

Yahoo group: pro94owners
Date: 2004-12-06 20:34:09 UTC
From: Scott Halligan
Topic: 2896 Message: 2896

Hello,

Can anyone tell me if the PRO-94B uses the standard set of Uniden software protocols?

There are a list of scanners that may be used for a type of scanner feed outlined at the below link.

http://www.scanmassachusetts.net/livescan/feed_tutorial.pdf

In a nutshell this setup uses Uniden software protocols in conjunction with two small programs and an external text file of alpha tags, and sends those tags into an audio datastream for inclusion in the song title area of Winamp software. Clients can hear the scanner's audio and see the accompanying alpha tag that shows them who they are listening to.

If I can confirm that the 94B uses this standard set of protocols I'd like to add it to the list of scanners that will work.

Thanks in advance, and Happy Holidays.

Scott

From: Jim Westberg
Topic: 2897 Message: 2897

I would say, "no," Scott. I went to www.scancat.com and downloaded the new software, there.

The software is really fantastic.

The automatic detection for the radio does not work, as it would in Uniden, so you just follow the instructions in the pop-up box and off it goes.

I seriously don't know how I managed before the software. I know myself and I can tell you that there was NO way I was going to manually program in 1000 channels, trunked and all, within the next decade.

Regards - Jim K9IDX

From: jaima1uk
Topic: 2898 Message: 2898

Hi all,
I have just bought a pro-94 @ ebay usa (awaiting arrival) this is my first ever scanner, Total Newbie !.
1: is the pro 94 u.s.a version any good for scanning uk frequencies
2: is there a frequencies list available for download
3: what is the best antenna to use and where to buy
4: any advice/info is more than appreciated
Regards to one and all

2899. Re: [pro94owners] Digest Number 828

Yahoo group: pro94owners

From: Dennis - den6n
Topic: 2899 Message: 2899

I believe some of the frequencies in the UK are allocated differently,
and this unit may skip some of the bands used there, but by and large
it should be of use.

Try Google for frequencies, type in something like "UK scanner frequencies"
and you should get some results.

Dennis

Well, if it's a trunked system, they MIGHT have fireground talkgroups. They MIGHT use the dispatch channel. They MIGHT have NON-trunked frequencies that they use for fireground. It all depends on the operating practices of the department. On a trunked system, you would automatically hear them switch, if you're in ID search mode, or you have the talkgroups programmed in ID scan, just as you would on a conventional (non-trunked) system if you had all of the frequencies...

Did that help, or just confuse you more?

When scanning a trunked system, you're not tracking the frequencies. You're tracking talkgroups. Talkgroups are assigned to users of the system...

ID Search is a mode that lets you hear ALL talkgroups that are on the system, provided you haven't locked any out. ID Scan monitors ONLY the ones you've programmed into the scanner...

Any more questions?

Ok mike first of all trunking is almost like a phone switch at the phone company it looks for a open line to route the call, when its open then it sends it out to that open line for the contact, in radio trunking, it assignes a frequiencie to that user, in example say there are 20 lines one line is for the radio or the direct line to the phone to say you need to go to line 15 now the radio groups are broken down to channel's or as we know them as talk groups, they are like phone numbers, one group can only hear that geoup on the same line, the control channel is what tells the group what line they can use!

Its broken down to as many groups as the system can hold, say for example, a trunk system hads 5 channels,the system can hold up to 15 to 20 groups, the more the channels in that system the more it can use!

and for operation for your 94 here is the link to the manual
http://www.rigpix.com/rs-realistic/radioshack_pro94_manual.pdf
hope this helps mike!

Mike,
Do you have a copy of the manual for the radio? If so, instructions on how to program a trunked system start on page 41. Specific information on how to program trunked frequencies can be found on page 44. If you don't have a manual, a copy of it can be found in zip format in the group File area. Go to http://groups.yahoo.com/group/pro94owners/files/ZipFiles/ to find the manual.

Quoting from page 13 of the manual...

You can power the PRO-94 using an 9V, 300 mA AC adapter and a size H Adaptaplug (neither supplied). Both are available at your local Radio Shack store.

Mike:

Try using a search engine like Google and in the search box, place the name of the area you are seeking the radio frequencies.

As an example, put this in the search box...

Lake County IL radio frequencies.

A search as simple of this can often bring up many links. Then, once you have a list of links, check them out.

2920. Database for scanner radio frequencies

Yahoo group: pro94owners
Date: 2004-12-21 21:03:52 UTC
From: K5MKE
Topic: 2920 Message: 2920

Hi All,

I happen to use two databases to search for scanner frequencies:

www.radioreference.com (Linsey Blanton's site)
and
www.cityfreq.com

These seem to be better and more current than other books.

IMHO, the scanner book and accompanying CD that "Rat Shack"
has is "out of date" by the time it's printed, some freqs
have been long abandoned for UHF or trunked frequencies and
the CD is impossible to use, unless you have FOXBASE database
software.

I keep up with most of the police, fire, etc. through the
Caddo 911 trunking system. For other agencies, I've used
both the aformentioned website databases with great results.

If you want or need other frequencies, I reccomend those and
supporting them with your time, freqs and $$$$.

Respectfully,
73,

"Buck"/K5MKE

Not sure, but it seems like you might be stuck in trunking mode. Try hitting TRUNK to get you out, then SCAN to scan what you already have programmed.

Double check your freqs. to be sure you didn't enter any incorrectly
or in the wrong order etc. I have experienced the same thing when in
certain parts of my county with bad radio reception (RF holes?)where
my pro 94 will not trunk.
What type of system are you trying to listen to and where?
Tom

If you are hearing the data channel's buzzing, Then most likely you are NOT in trunking mode... but in conventional mode.... OR, the system type you have set in the radio is incorrect and it cannot "trunk" due to that error.

2931. Did you get a Scanner for Christmas?

Yahoo group: pro94owners
Date: 2004-12-25 15:02:18 UTC
From: harryp10_2000
Topic: 2931 Message: 2931

If you did or are just have problems with Trunking, go back to the very beginning of this groups post (1999-2000).
You will find alot of answer's to your questions in the earlier posts of this group.

Hang in there, it takes practice. Scanning "Trunk" groups is a lot different then the old days of monolog.

Regard's,

pro94owners-owner,
Harry

From: scoutnr
Topic: 2933 Message: 2933

usually I'm pretty good but I am clueless in programing this scanner
for my son, our frequency are
453.200 - Bristol Town Police
154.890 - Bristol Town Police
155.130 - Bristol Town Police
158.970 - Bristol Town Police - Eastern New England Net

How do I search for trunked systems, any detailed help so I can
reset this thing and start from scratch?

2936. New Pro-96

Yahoo group: pro94owners
Date: 2004-12-28 15:40:22 UTC
From: K5MKE
Topic: 2936 Message: 2936

Hi All,

I don't know if there IS a Pro-96 yahoogroup yet, but I was wondering if any of you have purchased one or tried it out yet? Five hundred dollars seems to be a LOT of $$$$ to put out on a handheld scanner, even IF it's digital.

Anyone have a 'progress report' on how their experience is with this one?

Respectfully,
73,

"Buck"/K5MKE

2937. PRO-96 Digital Trunking Handheld Scanner, WOW!!!

Yahoo group: pro94owners
Date: 2004-12-28 22:33:13 UTC
From: harryp10_2000
Topic: 2937 Message: 2937

PRICE: $499.99

Here's the link:

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-526

This handheld scanner has an abundant memory capacity, able to store frequencies in 5500 memory channels. Plus, you can store up to 16,500 ID codes in one "working" 500 channel, 1500 ID code scanner with 11 "virtual" scanner pages of memory! This scanner follows APCO 25 digital and virtually all analog Motorola® and GE/Ericsson EDACS trunked systems. More and more cities are using these trunked systems, allowing city services to share the same set of scanner frequencies. Conversations on these systems start on one frequency, then shift to a different one with each transmission. This scanner can follow these systems. Patent Pending.

PRODUCT FEATURES
☐ APCO 25 digital trunking including the newer systems using a 9600bps control channel
☐ Scanner follows analog Motorola I, II, I/II and GE/Ericsson (EDACS) trunked radio systems
☐ Scanner is preprogrammed with the most often-requested systems☐if you live in a major metro area, your city's system is probably already loaded
☐ Expanded frequency coverage picks up local marine, police/fire, HAM, VHF-air, racing, CB, weather, FRS/GMRS/MURS and virtually every other popular scanner frequency as well
☐ FM/AM mode
☐ SAME (FIPS) weather alert
☐ Backlit display and keypad
☐ Channel scan
☐ Alpha display can show name of service
☐ Continuous Tone Controlled Selective Squelch (CTCSS) and Digital Coded Squelch (DCS) decoding
☐ TCXO for frequency stability; designed for new 6.25KHz channel spacing
☐ Frequency coverage: 25-54, 108-136.9875, 137-174, 216.0025-225, 406-512, 806-960MHz (except cellular), 1240-1300MHz
☐ PC interface
☐ Requires 4 "AA" batteries, not included

2938. Trunked frequencies

Those do not look like trunked frequencies. Just conventional frequencies.

For WIN95, you should go to www.starrsoft.com and download it directly
from the programmer :)

For questions about the software, WIN95's programmer, Don Starr, also
belongs to the PRO-95 group:

FS: Radio Shack Pro 94A

I'm selling an almost mint PRO-94A 1000 channel trunking scanner. I don't have the box or paper manual but I do have the manual on CD-ROM.

Sale includes the radio with it's original antenna, manual and Radio Shack "H" power adapter tip.

Asking $95.00 with free USPS Priority mail shipping!

Payment by USPS or Wal Mart money orders only.

Contact me at kg0wx at cox dot net. First come, first serve!

those appear to be old fashioned conventional freq's.
just put them in the scanner and don't worry about trunking tpe.

Here's a dumb question for someone. How many 94's are there? I bought one several years ago that doesn't have a programming jack. I'm just wondering which one I have.

2958. Pro-95 file for Massachusetts South Shore

Yahoo group: pro94owners
Date: 2005-01-04 05:12:16 UTC
From: Justin
Topic: 2958 Message: 2958

Hi all, I am a new scanner owner and am having fun figuring this unit out. Learning is half the fun, as I am new to scanning. What does 203.5PL mean? I will learn. Anyway, I have downloaded and am playing with the Starsoft software and have programmed some local Police frequencies. I have no idea yet what I am doing with trunking systems. I was wondering if any members live on the South Shore of MA and would be willing to e-mail me your config to play with, the .p95 file. Thanks much, I hope to contribute once I get my head out of my butt with this stuff. I am an avid SW/MW listener and am pursuing new interrests in radio.

-Justin

If you can scan trunked and conventional at the same time, it's a
PRO-94A. If not, it's a PRO-94. The one with the PC/IF jack is the
PRO-94B.

Look on the back of your radio and it'll tell you...

2960. Re: Pro-95 file for Massachusetts South Shore

Yahoo group: pro94owners
Date: 2005-01-04 13:49:57 UTC
From: K5MKE
Topic: 2958 Message: 2960

Hi Justin, All,

The 203.5 pl is the "sub-audiuable tone" that is transmitted to open up the *squelch* on the police/fire radios, so they only hear transmissions for them, not other nearby towns or those that might come in through shifts in the ionesphere, aka. "skip."

Since scanners do not have to have that feature, just igonore the tone settings. If you were a "ham radio op" these tones must be programmed in for you to hear and transmit on the repeater you are trying to listen to and talk on. Most 2meter and 440mhz near major cities are 'toned', to protect them from 'ingress' from commercial 2-way radio repeaters.

I hope this helps.

Respectfully submitted,
73,

"Buck"/K5MKE

to program any channel:

MAN
[channel number you want to store the freq in]
PROG
[freq]

to reset the unit:

turn off
while holding down 2 and 9, turn on
CLEAR will flash for 5 seconds and the memories will be cleared.

2964. Recommendations for new antena PRO94

Yahoo group: pro94owners
Date: 2005-01-08 15:52:28 UTC
From: kascinoh
Topic: 2964 Message: 2964

Hello all:

I'm new to this list. I have had my Pro94 for the past four years, and it accompanies me to work everyday.

I am interested in improving my reception by upgrading the rubber duck which came with the 94. Does anyone have any suggestions? I mostly need coverage for HI-band and our county's 800 system.

I tried a buddie's RS 800 Mhz scanner antenna, and I it worked well, altho it made the scanner deaf on anything but 800. I have seen ads for the Diamond RH77CA (multiband) and also another multiband available thru C.Crane website - has anyone had any experience with these?

Your thoughts/recommendations/real world experience is appreciated.

Steve

From: Justin
Topic: 2964 Message: 2969

I just picked up the Radio Shack antenna 20-006, it seems like a great choice for all bands as it is adjustable. It has made a significant difference over the duck on my Pro-95. The two best things about it are the price ($14.49) and it's availability. You can grab one easily at any store, no mail-order or shipping required. You can have one today and return it tomorrow if it does not satisfy you. Good Luck!

2971. Trunking locked out frequencies...

Yahoo group: pro94owners
Date: 2005-01-16 21:26:03 UTC
From: Mark
Topic: 2971 Message: 2971

Hello all, I just picked up a 94B.

With the 94 you could program trunked freqs and conv freqs in the same bank, lock out the trunked channels and then scan the bank (to hear just the conv channels) or trunk the bank (and hear just the trunking system). The scanner would still trunk the locked out trunking channels.

With the 94A you could program trunked freqs and conv freqs in the same bank, lock out the trunked channels and then scan the bank (to hear just the conv channels) or scan and trunk the bank to hear both. The scanner would still trunk the locked out trunking channels. That way you could just scan conv freqs.

I've got a newer 2052 that works the same way as a 94A and will assume the older 2052 works the same way as a 94.

With the 94B, I've noticed that if you lock out the trunking channels, the scanner won't trunk the bank. Which means if you try to just scan the bank the control channel stops the scan. Does anyone else with a 94B have this same problem(to me)?

I can't believe that after 4 models the 5th one doesn't work like the rest in that respect.

Can anyone else with a 94B scan and trunk a bank with the trunking channels locked out?

2972. does anyone know how to program the scan list ids on the pro 94?

2974. Erasing freqs

Yahoo group: pro94owners
Date: 2005-01-19 01:50:21 UTC
From: Bob Mueller
Topic: 2974 Message: 2974

I'm trunking Franklin County, Ohio. They have a 28 channel system used by a bunch of departments - City PD and fire, sheriff, and most suburban police and fire departments.

I had both banks programmed with the freqs, and used Bank A ID's for law enforcement, and Bank B ID's for fire. When I programmed the freqs in Bank A, I must have programmed in a non-trunking freq; the scanner will be trunking, then lock in on a frequency and stay there.

Is there an easy way to dump all the freqs in one bank, without resetting the whole scanner?

Never did on mine either. Don't understand why RS put that in the
manual.

The TRUNK button does it. Got to press SCAN first to select the banks.

Ok, the 94A doesn't trunk the bank with the trunking channels locked
out, so it doesn't work the same as way as a newer 2052 which does
trunk with the trunking channels locked out.

Typical RS.

Sometimes my scanner will find the data channel by pressing 'Trunk'.

Other times just pressing 'Trunk' doesn't do the trick. During these
times I press 'SRC' a FEW TIMES while in the Trunk mode.
Occassionally this will do the trick.

There are even other times where I end up having to turn the scanner
off and then back on before the above works. I don't know why the
scanner behaves like this sometimes while trunking. Perhaps the data
signal level being received by the scanner is too low?

Tom

>>> Sometimes my scanner will find the data channel by pressing 'Trunk'. <<<

Several years ago my scanner suddenly quit locating the data channel. After several days of frustration I discovered that the city had moved from a 20 channel system to a 30 channel system and moved the data to one of the newly added frequencies. As soon as I got the 10 new freqs added everything worked great again. RM~

Topic: 2988 Message: 2989

If it is a Motorola Type 1,2,900 Mhz systems,You Do not have to put frequencies in order when you program them,

EDACS Have to be in a certain order which is called an LCN,Data Channel Is always the first frequency,then the voice frequencies,depending on how wide the system is

3005. SOMETHING'S GONE WRONG

Yahoo group: pro94owners
Date: 2005-02-09 05:45:10 UTC
From: Bill
Topic: 3005 Message: 3005

My 94 shows dead batteries after about 3 min of use! It squeals, and turns iself off. It only works on the nicad setting. Won't even turn on with battery setting to Alkaline....????? I did a reset (holding 2 + 9 while turning the radio on) but to no avail: still have the same problem..

Any thoughts?

In a word, NO. In fact, no radio manufactured for use in the United States for the past few years can be modified to receive cell phones. Besides, why would you want to listen to some junkie ordering their drugs from their dealer when there's so much more good stuff on the police and fire bands? ;-)

sounds like a problem i encountered recently after blowing the dust off my 94. Performing a hard reset where all settings and memories were erased fixed the problem. Not sure if that was the 2+9 procedure that you said you did (dont have my scanner or manual handy). if you have an AC adapter available, try the hard-reset procedure using only the power adapter (all batteries removed from unit). then reinstall the batteries and give it a shot.

Hope this helps...

3018. Radio Shack PRO-94

Yahoo group: pro94owners
Date: 2005-02-14 02:44:52 UTC
From: Scott Christian
Topic: 3018 Message: 3018

Just got it all charged up and ready to go. My wife and I have been fooling around with it and so far all we can get it to do is scan and we cant seem to find our local police dept on it either. Truth is, we dont know how to work this thing and the owners manual doesn't help us a great deal. Are there better instructions on the web than the ones that came with it ? Also, the guy at radio Shack sold me a data cable and a disk ($19.99) but the scanner is not recognized by my computer, I suspect it doesn't have the capability for this, Am I right ? I was scratching my head when the guy told me to plug it into the headphone jack - which doesn't seem to do anything.....
Any help at all would be greatly appreciated.

From: Lee Bender
Topic: 3018 Message: 3019

As far as I know, the pro94 does not have the capability to be programmed via your PC. Unless Radio Shack has changed a 3+ year old model, the 94 was one of the few hand-held scanners recently offered by RS to not have the PC programming capability. Check the manual (I see nothing on the website) once more and then take it back to RS.

As for tuning into your local police, fire, EMS, business, and whatever other radio-users you want to listen to, you can purchase the Police Call Book from Radio Shack which lists lists of frequencies used by your local groups. This resource, however, tends to be incomplete and often out of date due to the nature of the publication and the contents that it contains. A better (and typically free) alternative is to search online for scanning resources maintained by local scanner listeners. These online forums tend to be much more accurate than the Police Call references because they are constantly updated with almost up to the minute input from hobyists in your area.

If you have radio systems in your area that are 'trunked,' let me know and I will try to locate a better guide for inputing those frequencies for you.

The Pro-94 has two types. There was the first one that came out and does not have the ability. The second one that came out does have the ability. You will have a plug on the side of the unit labeled pc/if. If this is there then it has the ability to be PC programming. Although the cord and software Radio Shack has in the store will not work on this unit. You have to buy the 29.00 cord and go to www.scancat.com <http://www.scancat.com/> to buy the program from them.

3025. button not working

Yahoo group: pro94owners
Date: 2005-02-22 01:44:52 UTC
From: coolpooler543
Topic: 3025 Message: 3025

Hi all

I have a Pro-94 that I have had for 2 years. Just recently the E-svc button quit working and i was wondering if there was anyway to fix it other than taking it to radioshack, or if there was a way to get around having to use that button to listen to 800 Mhz system. If I am unable to fix it I will just get a new one cause radioshack said that it would be possibly be $60 to get it fixed, so thought I would ask first if anyone has had this problem and fixed it manually.

Thanks for any info

Try opening the case on the radio,
once you have it open,
there are 2 boards,remove the back circuit board,once
that is done,there is a rf shield.take the 4 screws
off,then remove that board,remove the key pad.wash it
in warm soapy water,then let air dry,
then put it all back together and try it.

I would add, RINSE WELL. While the keypad is drying, clean the front surface of the PC board with alchohol. These things are mostly moisture-proof, but dirt and gunk can work thier way in over time.

In the rare case where the black conductive spots on the keypad rubber have worn out, you can probably order a new keypad from RS. Or you can do what I did once years ago, in a pinch, to get the keypad working on a ham HT - super-glue some very small bits of aluminum foil to the black spots.

You can stop laughing now. It actually worked.

YMMV. Standard disclaimers apply.

3029. RE: [pro94owners] Re: Radio Shack PRO-94

Yahoo group: pro94owners
Date: 2005-02-22 15:48:16 UTC
From: Results Not Typical
Topic: 3018 Message: 3029

There are THREE models. The origianal, the PRO-94
could not track trunked and conventional at the same
time, and didn't have the squelch backlight feature.
The PRO-94A fixed both issues. The PRO-94B adds the
programming PC/IF...

From: Rich
Topic: 3018 Message: 3030

The dealer that sold you the radio should have known that it wouldn't work in the headphone jack. In fact if you have the 94a version, it doesn't have the PC/IF jack on the left side. Also the cable you have is probably the black 20-069 or something like that. You'll need the 20-289 cable which is white (also has the built in electronics for 2 way communication and voltage drop to 5 volts). I bought the black and I know for a fact now that it will not work after investigating it.

Tek.

Not necessarily. The Pro-82 scanner gets programmed by inserting a
cable directly into the headphone jack.

Well, gee, Shawn, how about giving us a little information. Like, for instance, where you're located... are you having problems with a trunking system or a conventional system, what frequencies you have programmed in your radio, etcetera, etcetera, etcetera... You might find that you get more help if you provide a little more detail on what the problem is and what you've done in an attempt to rectify the situation...

73,
Glen N7GOT

Well I'm from Lubbock Texas, and I had all the frequencies downloaded to my scanner at radioshack when I bought it. I basically get everything that goes on here. But I guess where my problem is with the trunking part. During the day I mostly pick up construction and farm workers. Occasionally I will get the police/fire/EMS and all the fun stuff. At night I don't have that big of a problem because the construction and stuff is not on. But I'm needing help in following the police transmissions and things like that. For example I'll hear one thing from the police department and the next thing I know a farmer is talking about how he has a dead cow. I have read the manual atleast 4 times now and I only have had the scanner for 3 days. I'm trying to understand this stuff but I guess it takes time.

You probably broke the connection from the center pin of the antenna
connector to the circuit board. An easy fix if you are handy with a
soldering iron. If you're not, or all you have is acid core solder,
don't try it.

Yes, there is a good chance you will lose all your channels if you send
it to RS.

3048. Pro-95

Yahoo group: pro94owners
Date: 2005-03-19 00:17:53 UTC
From: ean146
Topic: 3048 Message: 3048

I have a Pro-95 programmed for EDACS. Scanner is programmed correctly LCN, but when scanning in Trunked Mode it will not pick up any audio. The scanner will recieve and show on the display that radio traffic is on that channel with no audio. Any Ideas?!?!?!?!

Go with the PRO-95. The only reason the price is lower is because it's discontinued because it's being replaced by the PRO-97...

I have both the PRO-94 and 95, and I say go with the PRO-95. The text tags alone make it better, but there are other reasons. Better sensitivity and the ability to scan all 1000 channels at the same time, along with the software being FREE to program it are the real winners...

Thank You for the reply..I like the Text tag feature. I have the 95 but was thinking of getting the 94 but if the 95 does more I see no need to get it. I also see that RS has the PRO-83 for 119.99 and the PRO-82 for 79.99 What do you think of the two scanners? I would not get them for trunking anyway..Cheers..Keithmj

Target in Peoria (Illinois) uses 151.625, Wal-Mart in Washington (about six miles east of Peoria) uses 154.57, K-mart (agin in Washington) uses 467.8125. Try programming the "dot" frequencies as a start.

We don't have a Jack-in-the-box, but most fast food around here use one or more of these five:
Fast Food 30.84000
Fast Food 35.02000
Fast Food 154.60000
Fast Food 457.51250
Fast Food 469.01250

"Dot" frequencies that I have:
Red 151.62500
Purple 151.95500
Blue 154.57000
Green 154.60000
White 462.57500
Black 462.62500
Orange 462.67500
Brown 464.50000
Yellow 464.55000
J 467.76250
K 467.81250
Silver Star 467.85000
Gold Star 467.87500
Red Star 467.90000
Blue Star 467.92500

my recommendation, use google next time.

i searched 'target scanner freqs' and came up with many pages,
here's some for target.

463.2875 Target
463.4875 Target

Target Stores 151.625, 151.955

3067. odd performance issue

Yahoo group: pro94owners
Date: 2005-04-07 14:33:24 UTC
From: jeff
Topic: 3067 Message: 3067

Seemingly out of the blue, my Pro-94 took a real performance hit.
It seems to receive only about 3 of the strongest freqs. Even when the
scanner next to it gets a freq, it won't.

I swapped antennas and opened the beast, looking for obvious problems.
The antenna connection is secure and still soldered to the board. There
are no apparent circuit board breaks or problems. (I have decent
soldering and so-so electronics skills)

Nothing seems to help.

Any ideas (please)?

thanks

From: harris ruben
Topic: 3070 Message: 3070

That's "Ed" before you program the channels. Plus, how did you manage to program the TGs? The system must be trunking in the first place before you can program the TGs in.

If you can hear the buzz control tone, then you may not be Trunk mode. Look at the display to see if it says TRUNK in the display's second line, on the left.

If it's trunking, and you can see the bars, then push SRC so it will pick up any TG that comes on. IF you have TGs properly programmed, press SCAN, and the word "SCAN" should roll across the display.

There isn't that much activity on the UC system. I didn't bother entering TGs at all. I just scan the system in SRC mode.

3071. Unauthorized user on Pinellas Fire TG 36 864

Yahoo group: pro94owners
Date: 2005-04-13 21:35:22 UTC
From: kf4lfd
Topic: 3071 Message: 3071

Just heard what sounded like a kid maybe 12 or 13 years old making
comments on the Pinellas talk group 36864 at about 5:20 PM.
Weird how some things really catch your attention.
It sounded like one of the fire officers told the young man in no
uncertain terms to take the radio to the nearest fire station or call
the PD and they would come get.
The kid made one or two more smart ass comments and then the officer
asked the dispatcher if he could block him.
That was the last I heard him.
Wonder where he got the radio.
Anyone else catch it?
Tom

I have these freq., which I assume are trunked.
860.7125* 859.7125 858.7125 857.7125 856.7125
Indiana state police, I got them from this page.
http://www.trunkscanner.com/states/in.html

Anyways, I added them all into bank one. I added them in order,
lowest to highest number. I guess that is all I need to do? I am not
getting any chatter on these, so I am guessing something is not right.
Am I missing something to get this going?
Oh yeah, I set the type to Mo. I have tried the normal and offset modes.

thanks

>>>> I got them from this page<<<<

It's been my experience that these internet freq lists are not always up to date. On one occasion I had a scanner working perfect on a Motorola system when it suddenly stopped working. After a lot of frustration I figured out that the city had added ten more freq's to the system and moved the control channel to one of the newly added frequencies.
Check with a local to make sure the freq's that you have are up to date and complete. RM~

Sorry, but the State Police are Digital. You're going to need a digital scanner like the PRO96/2096 or BC296/396D scanners from RadioShack and Uniden, respectively...

What do you mean by "check with a local"? I don't really know anyplace here to find that out, if that is what you mean.
How do I find that out? I guess I am still a bit confused on trunking. Would all the trunked freq. at a location be under one callsign? If so, then I could just add all the trunked freq. assigned to one callsign, at one location? I would then have a complete set for a trunk? *scratches head* It feels like I am missing a piece of the puzzle here. I am just not sure how to ask for it.

Oh well, guess I can live without them. Anyways, I have another
problem maybe someone can help with. I always here them say something
like "switch to channel 2" or "are you 800 capable" then it goes
silent, like they are using a frequency I dont have. How would I go
about tracking that down?

>>> How do I find that out?<<<

Anyone familiar with the system, I have two sons who are firefighters and
they got the info for me.

Someone just mentioned that you're area has gone digital, if this is true
you
are out of luck. Our system is going digital but it will be several years
before it is all completed and I need to put my scanners out to pasture or
sell them someone who has a non digital need for them. RM~

PS, If you verify that the system you want to monitor is going digital and
you just purchased the 95, take it back to RS and demand a refund.

I've used it. I had to program race freqs for my wife for the Daytona 500, in a hurry since she was going to take my old BCT235 but it got friend. So we bought the Pro94B, and I quickly put together an Excel spreadsheet, and I was trying to find a way to get them all in quickly. There are definitely some caveats with SCL on the 94.
First off all, only the latest 94, the "B" model, has the programming port active.
Secondly, it's fairly limited in it's ability to edit things. I found that it was able to consistently overwrite a bank, or overwrite ALL banks, but you can't just go in and edit one thing. I also found the UI a bit unstable, as it would sometimes lose columns and stuff. Seemed like the UI table widget it was built with wasn't fully baked yet.
The worst though was that I could never get it to save properly, so once I was done with a programming session and shut it down, I'd have to redo everything to get the freqs loaded into it again. I seem to remember it would say it saved the database, but when I tried to reload it there was nothing there.
For my case, where I already had an Excel spreadsheet with all of the freqs I was going to need, that wasn't that big a deal because I could cut and paste everything from the Excel worksheet into SCL fairly quickly if I wanted to change something.

Just so you know, I'm not a heavy user of my scanner, and I don't use it very dynamically. I tend to do a few days of research, program in a crapload of freqs filling up the memory, and then I don't use it very much unless:
a) I'm driving a long distance, like to my cabin in Maine, in which case I'll take it with me in the car to listen for traffic enforcement
b) I hear alot of sirens out my window or see an accident driving around town and want to find out what's going on.

I wouldn't consider myself a hobbiest, just someone who wants the ability to find out what's going on if I need to.

My Dad on the other hand is a scanner crack addict - he's got his on in the truck 24/7... :-)

From: rickrode208
Topic: 3093 Message: 3093

Two questions.
1. I know i missed something here on page's 34 & 35 of the PRO-94
Owner's Manual.
To remove a Priority setting from a freq or channel do I just
reprogram another selection in that bank, or should I reprogram back
to the first channel of that bank. I guess what I really want to know
is there a way to not have any Priority channels set other than
leaving the first channel in each bank empty or use Lockout.
Did I miss it in the manual?
2. Is there anyone else in the Onslow County N.C. area in here?
Hope I did not confuse you too much, any help appreciated.
Thankyou
Bill

3097. U.S. Court of Appeals Opinion

Yahoo group: pro94owners
Date: 2005-05-07 19:24:18 UTC
From: Richard L. Elliston
Topic: 3097 Message: 3097

On Friday the U.S. Court of Appeals for the District of Columbia released an opinion which apparently struck down an FCC rule which would have required the installation of circuitry in new computers which would have made it more difficult to copy digital television programs. There is an article about the opinion in today's New York Times online edition in the Technology Section. The Circuit's webpage was last updated around noon on Friday, and the text of the opinion is not yet included. According to the news article, the opinion included the following language:

"In this case, all relevant materials concerning the F.C.C.'s jurisdiction - including the words of the Communications Act of 1934, its legislative history, subsequent legislation, relevant case law, and commission practice - confirm that the F.C.C. has no authority to regulate consumer electronic devices that can be used for receipt of wire or radio communication when those devices are not engaged in the process of radio or wire transmission," Judge Edwards wrote.

Wow!!! What are the implications for scanner manufacturers and for those who enjoy the scanning hobby? Guess we better wait for the full opinion before reaching any conclusions.

Dave,
The URL for the New York Times article is
http://www.nytimes.com/2005/05/07/technology/07tele.html?
If you're not already a member, the website will make you sign up for a
free membership before it will allow access to the article.
The URL for the Court of Appeals decisions is
http://www.fedcir.gov/dailylog.html
However, this particular decision does not appear to be posted yet.
They will probably post it sometime Monday.

Hope this helps.

Richard

3106. Talkgroups - entering on PRO-95

Yahoo group: pro94owners
Date: 2005-05-23 02:41:04 UTC
From: Mike Calo
Topic: 3106 Message: 3106

Hi list -

I have a Pro-95 and I'm having a good deal of trouble programming talkgroup ids into the bugger. I'm in Anne Arundel County, Maryland, which uses Motorola II. Here's what I've done so far: I entered all the base frequencies - 854.5125, etc. - into bank 0, channels 0 -14. I then went into bank 0 in Motorola mode by pressing MANUAL:PGM:TRUNK:MODE, at which point I had BANK 0-0 ON/ID no. 00/MOT: 00000/ID# 00000. I keyed the number for the first talkgroup - 16 - and pressed ENTER, changing the MOT and ID# lines to 00016. I pressed the UP arrow key and entered the next talkgroup id; I repeated this process until I had entered all the talkgroup IDs I wanted to enter. Then I pressed SCAN. And I heard nothing.

When I go into manual mode, I can pick up transmisions, though on other talkgroups than those I coded. I verified that the bank was OPEN and not CLOSED, and I flipped the base frequency between normal and offset...no difference.

Do I have to key the talkgroup IDs on each channel in bank 0? What did I do wrong?

Any and all help will be greatly appreciated.

Mike

3108. Help programming AFS code on Pro94

Yahoo group: pro94owners
Date: 2005-05-27 20:40:33 UTC
From: nhredhead_65
Topic: 3108 Message: 3108

Hi all.. Newbie here. Sorry for the dumb question.

About 2 christmas ago I purchased a Pro 94 for hubby for a present Unfortunately it sits on a shelf because we can't understand the manual (first time buyers). I can program frequencies (I am the direction follower) but not Decimals or AFS'. I even tried this site http://marksscanners.home.comcast.net/94/94-1.html#Contents and I get an error message after I put the AFS in. When I put a decimal # like 0137 in I get 137.000. I don't think that is right.

Can someone please help me.

P.S. please talk to me as if I were a stupid redhead (hehe). I am not but just so I am sure I understand.

What city are you trying to monitor? If you give me that information I'll provide a step by step guide on how to set up the freqs and talk groups for the areas you want to monitor.

The AFS' I am try into input into the scanner are:

Decimal AFS
0137 01-011
0265 02-011
1440 11-040

If you could help me I would really appreciate it. I am in
Manchester, NH.

Thank you

Where do you get the good frequencies? I use a few out of the manual
I got with it but there aren't a whole lot of them. I'm in portland,
oregon

The part number I came up with from the service manual is GETC329513Z. I have no idea what that translates into for RS as there are no RS part #'s listed in the service manual. I recently purchased the belt chip and it set me back approx $10. It came with a new set of screws as well.

Maybe the guy at RS can tanslate the part number for you.

If you go into Radio Shack with the part numbers and the SKU number for
the PRO94, the should be able to cross reference to a RS SKU number
(they used to call it an RSU number, maybe still do).

Harry, with all due respect, it's not going to matter.
The MO of these lowlifes is to open up a yahoo email account, then spam every open group. They don't care that they get banned because they've already done the damage.

I moderate a few other groups and what I've found 99.9% effective is to not allow automatic signups. My groups ask for a brief statement about yourself, which goes to me for review. If I don't get a statement or something smells, they don't get approved. It's worth the few extra minutes to me and the people in the groups.

thanks for your hard work,
jeff

Topic: 3133 Message: 3134

I have a pro 94, Its the B model if that makes any
difference. Anyway I live in orange county CA.
Everything here is digital. The raido shacks here have
the Pro 95 on sale for about 140.00. Should I trade up
or keep what I have. Remember I only use it sometimes
when I am out on the road or When we go out of state.
If this were you, would spend the money, Is the Pro 95
a better scanner, Should I stay with what I have.

BTW the pro 96 wont help....I should have said digital
and encrypted.

Thanks

Doug

Absolutly stick with what you have . If the system is digital provoice nothing will pick it up so a more expensive scanner would be just as useless. The 94 is a great scanner so why bother with more bells and whistles.

3138. Pro 94a programming help?

Yahoo group: pro94owners
Date: 2005-06-29 02:05:43 UTC
From: martym
Topic: 3138 Message: 3138

OK..OK...on another board I have been listing the problems with my base scanner. Now for the portable.

Trying to scan Riverside County Trunking System. Picks up nothing scanning, but manually going thry the channels I hear just fine.

1. Stored correct freqs in LCN order.

2. System set for scanning in ED mode.

3. Pressed SCAN and SRC. Unable to hear anything.

4. Manually going thru I can hear fine.

5. Unable to hear a control channel like on the 400 Mhz trunked system I monitor.

any suggestions?

If you don't hear a control channel, then you are missing whatever frequency that the CC is on.... this is why you can't track this system... the scanner is not seeing anything to tell it to trunk.

Thanks for all the input. I got it working!

After checking and double-checking and changing things I found out I had it right..except the freqs I was using were outdated! Thats why no control channel!

thanks again

What area of Riverside County you reside in,you must
locate the control channel because it is a GE/Ericcson
System,that system requires a LCN,You must Find the
LCN Order for the system or systems you wish to
monitor.
CC must be the first frqueuncy for the sysy tem to be
monitored in trunk mode.

Hope this is helpful to you

3146. Trunking question - Data channel

Yahoo group: pro94owners
Date: 2005-07-23 17:27:22 UTC
From: erezcarmel
Topic: 3146 Message: 3146

I own a RS Pro-94b scanner.
In the Motorola Type II system, is it possible to know only by
the data channel what frequencies the data channel is using?
Is there a way that the Pro-94b will save the relevant frequencies
only by listening to the data channel?

Hi, my name is Dan and I am a RS PRO94 owner. I moved to Tucson, AZ 3 years ago from living a lifetime in NorCal (Sacramento, Auburn areas). if anyone needs freq help in NorCal (Sac, Aub areas) please don't hesitate to ask. i believe that there is no stupid question, just the one's not asked, so I will probably be asking alot of questions about my pro94. But for now, thanks for letting me join your group and look forward to sharing with y'all.

Hey Andrew, to clear your pro-94 turn your scanner off. While holding
the 2 and 9, turn on the scanner. CLEAR flashes for about 5 seconds as
the scanner clears its memory. NOTE...Do not turn off the scanner again
until CLEAR stops flashing. Otherwise, the scanner might not clear
properly. Hopes this helps you :O)

3154. Software for PRO-94 B version

Yahoo group: pro94owners
Date: 2005-08-02 20:36:33 UTC
From: Rodney
Topic: 3154 Message: 3154

New to this group and a total newbie to scanning!

I have read the posts talking about scan lite and the fact that there isn't another free program out there. So, my question is, what program is the best to use and where can I locate it even if I have to buy it?

Without a program can I erase some freqs that I entered for a trunked system?

Thanks for your help in advance!

3155. Re: Belt Clip & Screws

Yahoo group: pro94owners
Date: 2005-08-09 02:21:09 UTC
From: K5MKE
Topic: 3114 Message: 3155

Hi All,

I finally got tired of the P.O.S. Rat Shack belt clip set-up.
I went a office supply store and bought a large, wide metal,
"money clip" and epoxied it to the back. It seems as if the
regular "*Nagasaki Hardware Store's clip" breaks out around
the screw holders, leaving a rectangular hole. The "money
clip" does an excellent job of covering this and is MUCH
sturdier as a belt clip.

Since I've put it on, I haven't had the problem of it breaking
off and/or my scanner crashing to the ground from the too short
RS clip.

*NOTE: In 1959, Radio Shack had one store, in Boston, MA and
most of it's stuff was Jap Junk, hence the moniker - "Nagasaki
Hardware Store." Now, some 47 years later, it hasn't changed.

Respectfully submitted,
73,

"Buck"/K5~MKE

From: plg_boo
Topic: 3156 Message: 3156

Alass....Exactly what I was looking for!
I am in New Jersey and I just purchased my Pro 94.
PLEEEASE HELP!!!
It has been sitting on my dresser since last Sunday charging.
Why you ask?!? Because I cant program it!
I am lost how to program the trunked freqs, I am lost about Talk
Groups.
I have read the manual but it is still Greek to me.
I reckon I have to read it 50 or 100 more times.
I am going to check out some older posts to see if I can get some help.
Any help would be great.

~peace~
Boo

3157. trunking on pro94

Yahoo group: pro94owners
Date: 2005-09-01 02:06:54 UTC
From: grnbayfandan
Topic: 3157 Message: 3157

Hi everyone, I'm the newbie, and I do have questions, but the main question I have is...how do I know if a station is trunked and if it is, how do I program the funny freq (the 4 or 5 digit one) how do I program the PRO94 so I can listen to all my regualr freqs too? Is it an either/or situation?

Can you tell I've lost my owners manual and haven't taken the time to download and print?

Thanks in advance to anyone who can understand my question and maybe help me

On Wed Sep 7 20:25 , Boo <plgboo@...> sent:

Unless there has been a recent change, the Pro 94 can not be programmed from a computer. The Pro 92 and other
scanners can and there is free softward available from Bob Parnass and others for doing so. Thus, you will have to poke
and poke at your Pro 94 to program it. Do a Google Search for Bob and you should find his website.

thank you Dave. Yes, the pro 94b can be programmed via a computer program. Radio Shack sells the cable but no software. Go figure.
Thank you foryour help.

Unless there has been a recent change, the Pro 94 can not be programmed from a computer. The Pro 92 and other
scanners can and there is free softward available from Bob Parnass and others for doing so. Thus, you will have to poke
and poke at your Pro 94 to program it. Do a Google Search for Bob and you should find his website.

That is not correct Pro 94B is able to be programmed from a computer,
the only problem is that there is not a lot of choices on software.

Dominick,
Check out Rich Wells' Strong Signals site for those frequencies. Rich has put together a website that is a must-bookmark for all scanner enthusiasts. The direct link to the FAF (Frequently Asked Frequencies) page is:

http://www.strongsignals.net/access/content/faf.html

Hope this helps you out.

The Pro-94 starts its frequency coverage at 29 MHz, just above the CB frequencies. You can't receive them with this scanner.

It would appear that the radios that FEMA are complaining about not working well and those of the NYFD are trunking radios.
If this be the case, would it not be that if the power is out and the computers that this kind of radio system depends upon bot
have back up power that the radios are all but useless since most are not able to be used in a simple, non repeater mode?
Comments?

I worked on part of the City of Lincoln (Nebraska) EDACS system back in the late 80's (they called it 16+Plus back then). The systems do have back up power, and can be set up to operate as conventional repeaters and with a simplex "talkaround" mode in case the repeaters go down. Whether or not any of this is used or implemented depends on the system administrators.

Trunking systems are fairly complex. The technology is similar to cell phones. Disasters on the scale of Katrina and Rita are *extreme* conditions. The likelyhood of _any system to break down under such extreme conditions is increased greatly; the more complex the system, the more likely it is to fail (IMO). The most basic failure mode is the towers fall over or antennas are damaged. IOW, it's probably not the fault of the radios. Two tin cans and a string would blow away in a hurricane.

This is where (shameless plug) Amatuer Radio always steps in and fills the gaps, and (despite recent comments by a Motorola rep) is one of our most valuable emergency resources.

Just my opinions, standard disclaimers apply.

Jim:

Interesting to know that you worked on the Lincoln system.

I knew of the complexity of the Motorola systems and assume that the other manufacturers uses similar technology.

Hurricanes do tend to bend towers and soak batteries, and thus mess up an otherwise functional radio system.

Of course, when all else fails, call out the trusty hams for they will get the job done. One needs to go back in history of radio
and realize that most of the earliest developments in technology were done by hams and things are not all that different
today. But, try telling that to a salesperson who only knows what they learned from the company marketing department
training that they received.

Although I have yet to find the time to study for my ham exam, after 50 years of starting and stopping, I have many friends
who are hams. And, those that I posed this question to are in full agreement with you.

In my many years of disaster work with the Red Cross, we generally had a communications team that were hams and also
carried the RC radios.

3181. Lock out ID's Help Me Please!!!!!

Yahoo group: pro94owners
Date: 2005-09-26 18:50:35 UTC
From: dtamend
Topic: 3181 Message: 3181

My book says I can lock out up to 100 group ID's. When I get to the 20th one my scanner says full. Can some one help me with this. Let me give you a little more info. I have all my trunked frequencies on Bank 10. There are about 22 different frequencies on this bank. In my City many other services use these frequencies besides law enforcement. I am hoping to be able to lock out things like street maintinance, the dog catcher etc... and just listen to law enforcment. I tried spreading out my frequencies to 2 different banks but I still get a full message when I try to lock out anymore on either bank. ANY SUGESTIONS WOULD BE APPRECIATED.

> do i get it off hyper mode?

I have had this problem before also. Make sure that you press scan
then src right after you programed your last frequency. Don't press
any other button untill you do this. Type in your last frequency like
856.2625 <example only) then press the scan button then press the src
button. I you have the booklet that came with the scanner refer to
page 40 the "Storing trunked frequencies" section. It is important to
also look at page 42 refer to the "Searching a trunked bank". The
hyper scan will go off when you are actuall searching or monitoring
the trunked frequencies. I am fairly new to the pro-94 so take some
of the stuff I tell you with a grain of salt. I would never mislead
you on purpose. Also if you don't have the book go to the link below
and look around. around.
http://support.radioshack.com/support_electronics/57321.htm

Hope this helps. Let me know.
Good luck dtamend

From: Mike
Topic: 3185 Message: 3186

A *much* better approach is to use the ID scan feature of the trunk tracking. You can enter the talkgroups (or in some cases, only parts of the talkgroups) you wish to hear in a trunked bank and set the scanner to only lock onto those IDs. Read through the manual on this subject, if there is anything you don't understand please send a detailed message to the list about which talkgroups you wish to hear and what kind of system it is.

3187. Digital or not for next unit

Yahoo group: pro94owners
Date: 2005-10-01 05:07:56 UTC
From: Bob Mueller
Topic: 3187 Message: 3187

I'm in the market for a new scanner. Certain things are must-haves, like computer programming, and alpha tags.

Digital capability is a question mark right now.

I live in Columbus, OH, which is currently using county-wide 800 MHz trunking system. OHP uses digital. Franklin County is talking about going digital, but they've been talking about it for a couple of years now, and I suspect it will be at least 3-4 years before it happens. If someone here knows better, please let me know.

At any rate, come my birthday in a couple of months, I'm going to treat myself to a new scanner. I'll keep the PRO-94 that I have, and maybe just use it as a desktop/backup unit.

In my circumstances, would you buy digital, or wait? Which units are the front-runners right now for digital and analog? I'm not brand-loyal.

What review sites are the least biased?

From: Glen Tubbesing
Topic: 3189 Message: 3190

Well, first question that everyone will probably ask... did you read your manual? Did you read it again?

OK, let's see what I can do... first, what 5 digit number are you refering to? Are you asking about programming in the talk group IDs? Have you got the trunking frequencies programmed in correctly? Is it programmed as the correct type system? Motorola or EDACS? Can you scan a trunked system correctly so that you see the talk group IDs come up on the screen when you hear a transmission? I could try to help you through the process of storing a talk group ID in a talk group ID list, but it takes up a whole page in my manual and is pretty self-explanatory. Try reading the manual, then read it again.

From: Bob Mueller
Topic: 3192 Message: 3192

Perhaps old news to some, but I thought I'd share it.

It was the best day amid the worst years of Gene Hughes' life. He was 13 years old and seeking escape from the loneliness of a Los Angeles foster home by playing with an AM radio his uncle had mailed him. Tuning around the dial, he picked up something different from the dance hall music and campy radio dramas that normally spilled from the tinny speaker -- something unexpectedly genuine. "I suddenly heard strange voices, women broadcasting addresses and numeric codes," he recalls.

He quickly figured out that he'd somehow tuned into Los Angeles Police Department dispatchers crisply directing the city's black-and-white police cars to real robberies, domestic disturbances and traffic accidents throughout the City of Angels.

Here ya go Leslie.
www.scancat.com/scancat-lite
It's $29.95 + $5 S&H and it works great but you also need a cable from RS. (#20-289)

By the way group, I just increased the reception on my PRO-94 by about 1000% today! I just moved into a ground floor condo. Not only is it hard to get good reception inside this unit, but I am not allowed to put up any kind of antenna outside.

Solution? I went to Radio Shack and bought their 36" long magnet mount mobile scanner antenna. It comes with 16' cable and a BNC connector. I connected it to the PRO-94 and then set the antenna on a table in front of a large window.

WOW... It's like having a completely different scanner! I'm picking up tons of new freqs now loud and clear that the scanner couldn't receive before. It was $35 well spent!
B.

From: Chris Powell
Topic: 3197 Message: 3197

Hey all,

I've had this scanner for like, 2 years now, and I still don't have Glendale PD on it because of this stupid, confusing trunking crap. I have a Pro94A.

I think the little frequency booklet that came with the scanner is wrong, or I'm a complete idiot, or both. :)

I've looked at http://www.marksscanners.bravehost.com for help (great site), but no frequencies that I can find. I was wondering if anybody knows if the frequencies for Glendale, AZ PD in the Pro94A booklet are right or wrong, as well as the trunk type listed.

Thanks,
Chris Powell
Glendale, AZ

THe Pro94B can be programed with scancat lite, While the older version can not. Scancat is the only software out there and the only one I will use.

There are a couple of models of the 94. Check the label on the back. If it is a 94B, it can but computer programmed, it it is not Index Finger 1.0 is the only way to get it done. I understand that there is another version of IF 1.0, called Suckerafriend 2, but I have not tried it. The one I have happens to be a 94B.

Good luck

Chris

See if you can get a copy of SW Frequency Directory 9. It is the best there is for the State of AZ, bar none. The website is www.scannerstuff.com. Cost runs around 30-40 bucks.
I honestly think the person that wrote the book is the same one that wrote the Windows manual. It only makes sense if you already understand everything about it. An then you don't need the bloody thing.

3210. PROGRAMMING[motorola uhf{406.}]

Yahoo group: pro94owners
Date: 2005-10-27 02:17:00 UTC
From: glenneyk
Topic: 3210 Message: 3210

I am having problems programming(Pro-94)...I hope someone out there can help me.I am trying to program a Motorola[analog]system in the UHF range. It is in the 406. freq range. I programmed all of the required freq. in and then the base freq. {406.225}, then the offset comes up at pre-programmed 50....the "radioreference" info tells me it should be 380[offset], when I try to change the 50 t0 380...error comes up. I am trying to program (Abderdeen Proving Ground) in Maryland. Can anyone understand what I am trying to say?? HELP!!

From: atlanta23g
Topic: 3211 Message: 3211

I just wanted to say Hello. I just found out about this Yahoo Group from ScanAtlanta@yahoogroups.com

I have had my Pro-94 for some time now. I even purchased a second one from Ebay. It is a great little scanner in my opinion for what I need. However I do not understand the programming for the trunking part. I would like to take one bank of one scanner and possibly add The Georgia State Patrol. Maybe the City of Atlanta as well. I live just south of Atlanta in Clayton County. Clayton County is not trunked.

I got to the put of entering the frequencies for the City of Atlanta. But I am confused on the secondary part of entering that number.

Is there anyone that can help me with programming my scanner?

I would especially like to chat with anyone in this group that lives in the state of Georgia.

Press the following from normal frequencies. However if you are trunking I am not sure of that.

Manual
1
Program
Frequency 123.4567
E or Enter.
Program again to go to 2.
Frequency 123.4567
E or Enter.
Repeat over and over until you have what you need added.

The first thing you need to do is read the owners manual. If you have
any questions after reading the manual, then you can post more specific
questions to the list.

Trunking. Dude, I've had this dang scanner for 2 years now, and I still can't figure it out, and I'm a programmer. It's complicated. I'd like to know too. None of the online manuals I've found help a bit. They all tend to assume you already know all the technical terminlogy and understand how these systems work. The whole reason I got this POS was to listen to my own city's PD, which I can't.

glendale arizona is digital along with scottsdale ,maricopa county, tempe, phoenix.

you will need the new digital scanner.

Trunking. Dude, I've had this dang scanner for 2 years now, and I still can't figure it out, and I'm a programmer. It's complicated. I'd like to know too. None of the online manuals I've found help a bit. They all tend to assume you already know all the technical terminlogy and understand how these systems work. The whole reason I got this POS was to listen to my own city's PD, which I can't.

CP

My scanner:
Pro94A

My PD:
Glendale, Arizona

>>>> The first thing you need to do is read the owners manual.<<<

Right! Unless you do this on a daily basis I doubt anyone could do it without manual in hand. It's been quite a while since I programmed mine (Motorola) but can tell you that the frequencies have to be entered as "trunked freq's" and if for some reason you don't happen to have the correct control frequency/channel you are out of luck. For insistence, one time mine suddenly quit working and after going nuts for a week or so I discovered that the city had added 10 new frequencies to their system and had moved the control channel to one of the newly added frequencies.
Research to make sure you have all the right frequencies and hang in there,
Rob Mills

hello, I have had my pro-94 for a few years now, and I totally enjoy it. I have one question though. Can my scanner be programmed to recieve signals from my cellular telephone? I have always been somewhat curious about this, and until now, I have not found a forum about the scanner.

3220. new frequencies?

The original question was "How do I program my scanner?" Where do you want us to start? Read the manual? He gave us absolutely NO information about the problem(s) that he was having. Is he trying to scan conventional frequencies? Is he trying to trunk? If so, what type of system? Where does he live? What does he want to scan? My foot hurts. Please tell me exactly why my foot hurts based on the information I just gave you.

I'm 70 years old and don't consider myself a rocket scientist but it took me all of 30 minutes to enter a 30 channel Motorola 800 system and have it working. I could not have done it without the manual in my hand. Don't recall seeing anything about a base or offset.
If for some reason anyone is trying to program the 94 (or any other radio) without having a manual my advise is to forget it until you can get a manual either from this Yahoo group or Radio Shack. RM~

The newer military trunk systems are Motorola SmartZone digital systems.
You won't be able to trunk them with this scanner.

I finely found what you are talking about, "base and offset freq's", it
appears that this has to do only to VHF and UHF Motorola systems and they
would be
unique to the system you are trying to program. If the www.trunkscanner.com
site that the manual refers you to doesn't have the correct information you
may have to get hold of someone with inside info on that particular system
such as a dispatcher, technician or else if everything else fails a local
radio shack employee (lordhelpus). RM~

Hi Brian,
You need to have a digital scanner for those freqs. From what I have seen they run about $500.
here is a RS link.
http://www.radioshack.com/search/index.jsp?kwCatId=&kw=digital%20scanners
Good luck.

Amy

Yes, RadioShack sells digital scanners. They both run about $500. If they have a specific car-to-car channel, and they don't use Private Call for that, then yeah, you'll hear the C-C traffic. The PRO-96 and PRO-2096 are both very easy to program (they're identical, in fact), and if you purchase the programming cable and WIN96 software from http://www.starrsoft.com then you can use your computer to program it. The PRO-94 isn't WORTHLESS, but it's quickly becoming one of the old scanners that you'll be able to say, "Hey, guys! Remember THAT mistake?" The PRO-94 should have never made it to market...

Topic: 3085 Message: 3235

If you don't have a Police Call book or a Frequency CD just do a Google search for "my town" scanner frequencies. (fill in your state, town or county, etc.)
Then just follow the directions in your owners manual for "entering frequencies".
If you don't have an Owners Manual then go to www.radioshack.com , do a search for PRO-94 and there will be a link on that page to download the Owners Manual.

To program the scanner press manual. Then when you see 000.000 MHz
press program and enter your numbers, followed by the E key for enter.
If one frequency is already programmed when you press manual press
manul again to go to the next available frequency bank. As far as
finding a frequency goes, find a search engineand type your city,
state and then frequencies, I find doing this will bring up a lot of
results.

3239. antenna problems

Yahoo group: pro94owners
Date: 2005-11-07 21:16:50 UTC
From: Jesse
Topic: 3239 Message: 3239

I have installed a 4' fiberglass antenna on my pickup; the antenna was designed for scanners. When I have Pro-94 hooked up to the antenna you can hear a whine that goes up and down with engine coming from the scanner. I put my Pro-95 on the antenna it doesn't whine. What is going on? and what can I do to fix it?
Thanks, Jesse

Sounds like the 94 isn't filtering out the alternator noise as well as the
95. You can get alternator filter kits from Radio Shack or automotive sound
shop but I would check my battery cables first and make sure they are clean
and making good solid contact. RM~

Gerry

the pro 94 is a dual trunking scanner,it covers the
Motorola Type I & II,EDACS,

The motorola systems you dont have to program the
system freq in order.but the EDACS freqs use what they
call a Logical Channel Order Or LCN.The control freq
for The EDACS has to be the first frequency in the
LCN.

Motorola Talkgroups will show up Like This
(304,1904,16016)
EDACS Talkgroups will show up(04-002,04-003)

Hope this is helpful info

From: ClaytonCountyNGa@aol.com
Topic: 3250 Message: 3250

Pro-94B is the one that can be programmed by RS correct? Is that the real name of it Pro-94B? I wanted to check on some Ebay prices, and I did not location one. They all were the Pro-94.

I assume the "B" has to have some sorta of port or what not on it. Is that the only way you can tell the difference between the two? Is the "B" a total different look?

Thanks for your help in answering this.

I am still looking for anyone that might live in or around Atlanta/Georgia with a Pro94.

The model number locater on the scanner will indicate 94B, but will not be anywhere else. On the right side of the scanner, same side as the volume control, will be a port labeled pc/if. This will be the only differences externally.

Gerry,
The scanner has a set of preprogrammed scanner frequencies, to scan weather, ham, police, marine and air. Just press the button that says E and to change what bank to scann press E again. IF it scans a frequency you like press hold, write down the frequency. To program a frequency press man. until you find a space that is not used, then press prog. enter the frequency followed by E and the freqeuncy will be programmed into the scanner. If you know of an empty number in which to program press Man. Enter the empty number and press Man. again it will skip to the number. If you are looking for frequencies, you can go online type in your city, and state and there will be several HTML texts you can look for frequencies, as far as polic, military etc.....goes.

Good Luck
Scott

I think part of the problem here is that you are associating talk groups with frequencies. In trunking, we don't care about the actual frequencies once the system is configured. The channel RF frequencies have no specific assignment other than to carry the next user transmission. A talk group is, literally, a group of users that are each assigned the same digital ID code. When a user pushes the transmit button, his radio transmits the digital ID code to the system, and the system then "tells" all the other radios with that digital ID code to hop over to whichever RF frequency is available. All other radios that do not match the ID code remain on the control channel, listening. When the user unkeys, the radios hop back to the control channel to await the next instructions, and the process starts over again. This is what happens in "transmission trunking"; there is also a form called "message trunking", which is very similar, but the user(s) remain on the same RF frequency for a period of time until the business of the moment is completed, then return to the control channel.

Therefore, "talk groups" are a list of digital ID codes associated with a particular trunking system, and can be programmed into a "bank" in your scanner in much the same way as frequencies are handled in a non-trunked system. We tend to call them "channels" because that's a paradigm that the users can easily relate to. Once you get the RF frequencies properly entered, you need to put the scanner into trunking mode and enter the talk groups that you are interested in. Your local Radio Shack should have a list of systems of interest in your area.

Hope this helps.

saprestin,
To program you scanner find a frequency online, for instence go to a search engine put your city and state and frequencies, when you find a frequency find and empyt bank by pressing man. then when you found one press prog. then type your freqeunce that is represent in Mhz, thousand khz and 10 thousands of cycles per second. Then press the button E, as far as computers go software for this model is hard to find but to connect it to the computer is easy, just go to radio shack and buy the cable, but if your willing to spend some money look at the scancat software, but I keep searching for free programming software.
Hope this Helps,
Scott

Try a common Police Frequency such as 460.475 Mhz, you can also scan these bands just by pressing the E button.

For the money, Scan CAT can't be beat. It has links to several databases of frequencies and talkgroups. You load them into the upper database and paste the frequencies and groups you want into the lower database and you're done. Keystroking a system such as the Los Angeles could take an hour and it is very easy to introduce errors that are difficult to troubleshoot! I preload systems before I travel, then dump them into the radio as I get into the area of interest.

Also, this software supports numerous radios, so if you have different units, one software package does the job.

Money well spent!

Just my $.02

It's the day after Thanksgiving, otherwise known as the start of RETAIL XMASTIME for the merchants. The alleged sales, the longer hours, the more irate customers, and whatever else the season brings.

I like Ebay.

3274. RE: [pro94owners] Black Friday Sale

Topic: 3271 Message: 3274

BLACK FRIDAY is the day after Thanksgiving, This day is actually the busiest day in retail. Stores (WalMart, RS, and others) open way early (WM a@ 0500 some places) and there are usually lines outside 45 minutes early. I bought a $600 computer system for $350 by getting up early. To me it was worth it. They are usually 'unadvertised specials' and the place is a mad house!!!!!!!!!!!! I speak from experience, being on the register side. Get a good bargain time.

Hi,

Everyone probably knows (at least in the SF Bay Area) that this Friday you can buy a Pro-94 for half off.

This is fine provided you are at the store between 6am to noon. Good Luck! Better idea is to purchase now, then get refund on the difference at the appropriate day/time. Caution, you must be there at the right time/date in order to get the refund price.

Thanks,

Star

3277. New radio hiss

Yahoo group: pro94owners
Date: 2005-11-26 00:07:29 UTC
From: jeremiah
Topic: 3277 Message: 3277

I'm just getting back into scanning and picked up a brand new pro 94 today. I love the radio, it has tons of memory and is very fast but I've noticed that it has a fairly quiet hiss that doesn't seem to be dependent on volume level. It stays at the same level rather I have the volume on full blast or turned all the way down. Its more noticable when I use head phones. Is this normal or did I get a bad radio?

Any info from people with experience with this radio would be appreciated.

Thank you

Jeremiah

In defense of the Pro-94, I bought one this morning at the $75 sale price. It's a Xmas gift for someone who is wanting to get into scanning for the first time. At that price it is a fantastic deal and a fantastic little radio.

My first scanner cost me $150 at a time when $150 would pay the monthly rent on a 2 bedroom apartment. It was about the size of a toaster and it weighed about 25 pounds. It had 10 channels and I had to order a crystal for each channel at $5 a piece plus tax. About 6 months after I bought it the police and fire department in my area moved from VHF to UHF and this scanner didn't work on UHF. Any questions?
Bruce.

3280. Question about this scanner

Yahoo group: pro94owners
Date: 2005-11-26 01:45:30 UTC
From: Jeff
Topic: 3280 Message: 3280

Sorry for not being a tad bit more knowledgeable on this, but is this one of the scanners that
comes with a CD that will basically program your locale's trunked law enforcement radio system for you, or does it have ready-made programming otherwise already loaded into the scanner? Because manual programming of a trunke system, is just way over my head.

What is the Uniden equivalent of this model? I happen to live in San Marcos, Texas.

Thanks,

Jeff

The current version of the 94 does have a programming connector.

No software comes with it, but is available - Win94. A lot of the officers at workj have them and I program them.

From: Robert
Topic: 3275 Message: 3286

I bought a Heathkit 10 channel crystal scanner "kit" many many years ago, and spent 3 weeks putting together the scanner as my first project. I was surprised when the darn thing worked! All it took, was a little tweaking and the purchase of crystals.

Then, onward to the SBE Optiscan, a great "programmable" scanner....that used "punchcards". Woo...Wooo, I was uptown now! After that, it was a series of Radio Shack Patrolman crystal controlled. Then, the Bearcat 220, Radio Shack 2004 & 2005's. The 2004 & 2005 both went through serious internal modifications to increase their usage and capacities.

And, I forgot to mention the old Hallicrafter shortwave radio. It spent more time listening to local events in Amarillo, than on distant shortwave stations.

What fun over the years!

Oh yea....after reading several reviews throughout the web...I pulled out of purchasing the 94, to replace a very crappy 92 that's been crap since I bought it new. And, instead, purchased online a 2052 base station unit. I believe I will either hold out & purchase a 95 later, or just say "the heck with it" and go get a Uniden. I've been relatively unimpressed with RS's hand held units in the last 5-8 years. I have an AOR 1000 channel handheld, non trunking, that receives about 200% better than the 92 has ever received.

My first scanner cost me $150 at a time when $150 would pay the monthly rent on a 2 bedroom apartment. It was about the size of a toaster and it weighed about 25 pounds. It had 10 channels and I had to order a crystal for each channel at $5 a piece plus tax. About 6 months after I bought it the police and fire department in my area moved from VHF to UHF and this scanner didn't work on UHF. Any questions?
Bruce.

From: Mike
Topic: 3277 Message: 3288

This is a common complaint about the radio. The hiss is 'normal' and is present in all Pro-94s, however the level differs from unit to unit. It sounds like yours is on the high end of the tolerance scale and exchanging the radio will likely get you one that is quieter. See if the store will let you try the new one before you leave with it.

3290. digital or analog?

Yahoo group: pro94owners
Date: 2005-11-26 15:17:33 UTC
From: Gary R.
Topic: 3290 Message: 3290

I'm a newbie. Apoligies if this is a dumb question.

According to this page:

http://www.radioreference.com/modules.php?name=RR&ctid=2848

the three closest jurisdictions to my home (Fairfax County, Fairfax City and Vienna, Virginia) "all use this Motorola APCO-25 Digital System for public safety communications."

As I understand it, this is a digital system, and therefore not compatable with the analog Pro94. However, when you click on the detail link:

http://www.radioreference.com/modules.php?name=TRSDB&sid=182

It says this:

"System Type: Motorola Type II SmartZone"
"System Voice: Analog and APCO-25 Common Air Interface"

Which seems to indicate they're running *both* digital and analog. Assuming the info on that page is correct, my question is: Will the Pro94 work for these jurisdictions?

Thanks for any help!

Topic: 3290 Message: 3291

The system is probably a Motorola Smartzone 4.1 system. This means it is CAPABLE of running analog and digital talkgroups.

However, they may only be running digital talkgroups.

Scan the frequencies and see if you hear any analog. If not, you will need another scanner.

I think you will find that most trunking scanners are lacking in user interface strengths. This is only made worse by the poor quality of the owners manuals.

At least that has been my experience with 92, 94, 95, 296D, 796D, 895 that I have used.

Even when I eventually, "figure out" a feature, if I don't use it for a while, it gets fuzzy. Maybe it is just me that is fuzzy.

The jack is on the radio, the plug is on the adapter.

My father in law's PRO-94 has developed a problem with the jack and it
causes intermittent connection when using the a.c. adapter.

I am wondering if anyone has a jack they would sell, or know if they are
available from Radio Shack.

It may just be a cracked solder joint on the circuit board. This is a
common ailment with coaxial style power jacks, especially if they are
used a lot.

Topic: 3280 Message: 3307

Here is what is weird, this scanner is computer programmable, but there is yet to be a program that works with it that comes with it, there is one software that can be purchased at www.scancat.com.
If you are looking for a uniden equivelent go to www.uniden.com, most of them will be an equivlent, or if you really get into the scanning hobby, go to www.icomamerica.com. this site is for professional, military, ham radio, and personal use. The PRO 94 does come with pre frequencies, it can scann the air,marine,police,ham, and wx bands. Press the E and press it till it reaches the desired band.

3310. Re: New radio hiss

Yahoo group: pro94owners
Date: 2005-11-28 18:03:07 UTC
From: jeremiah
Topic: 3277 Message: 3310

Oddly most of this hiss has gone away after a couple of hours of use. I'd heard of "Burn in" for new electronics but had never actually experienced it before! I also noticed that when I use high quality headphones they tend to put more of the noise through so I switched to a cheaper pair that doesn't have the same frequency response.

Has anyone tried putting a noise canceling circut in the scanner? I've thought about just using a small box between headphones and the scanner since I can't hear it at all when I'm just using the speaker.

Thank you for your feedback

Jeremiah

You can also try using an external speaker to get better audio. Even if you use an amplified external PC speaker it will sound much better. As a matter of fact just adding a little bass will produce much better sounding audio than you can ever get from that tiny little internal speaker!

Subject: [pro94owners] Re: New radio hiss

Oddly most of this hiss has gone away after a couple of hours of use.
I'd heard of "Burn in" for new electronics but had never actually
experienced it before! I also noticed that when I use high quality
headphones they tend to put more of the noise through so I switched to
a cheaper pair that doesn't have the same frequency response.

Has anyone tried putting a noise canceling circut in the scanner? I've
thought about just using a small box between headphones and the
scanner since I can't hear it at all when I'm just using the speaker.

Thank you for your feedback

Jeremiah

From: Steven Coles
Topic: 942 Message: 3320

Jeremiah,

I have a Radio Shack FM antenna I cut down and re-spaced to match the dimensions of a 2-meter 5-element Yagi antenna in an old ham book. It's indoors on the ground floor. When I use it with my Pro94 it delivers crisp clean reception of aircraft and 2-meter ham repeaters I can't hear at all with the rubber ducky antenna.

Regards,

Steven

Just about any antenna works better than a "rubber dummy load". Try the
homebrew generic 1/4 wave ground plane shown here:

http://www.bloomington.in.us/~wh2t/Jpole.htm

(scroll down a bit)

The $5 cable works just fine! The software that it comes with is useless as it will not sync with the 94 but the cable works just fine. I was able to use scancat lite with the cheap cable, though it wasn't on sale at my radio shack and I had to pay $20 for it. If you really wanted to go the cheap route I'm sure that it wouldn't be too hard to make your own for only a few dollars.

jixix@...
My AR8200 works fine, except when using the earphone. There's a lot
of non-amplified hiss, even with the volume all the way down. This
isn't a problem with the speaker, because the hiss isn't really that
loud to carry any distance, but when trying to listen in a quiet
room with an earphone, it is quite annoying.
This hiss doesn't increase with increased volume, so the solution is
simple. Use a Radio Shack in-line earphone volume control, part no.
42-2459, $4.99. By turning the inline volume down, this cuts the
background hiss to almost nothing. To compensate, the scanner's
volume is turned up...and the AOR8200 has plenty of volume to spare.

The same technique can also be used to make the annoying bleeps on
Yupiteru scanners quieter, as the bleep volume is fixed in relation
to the received audio output.

The $5 cable works just fine! The software that it comes with is useless as it will not sync with the 94 but the cable works just fine. I was able to use scancat lite with the cheap cable, though it wasn't on sale at my radio shack and I had to pay $20 for it. If you really wanted to go the cheap route I'm sure that it wouldn't be too hard to make your own for only a few dollars.

You can only write to the 94 according to the scancat documentation
and the program itself you can not read from the scanner.

Yikes. Anyone pinned out the cable? For that price, I would think it
must have an RS232 level converter built into it.

Is it write-only or read/write to the 94?

I'll try to hack my 94a to see if it talks if someone can provide tech details of the cable. Even if it has an RS232 level converter, it's within the realm of possibility.

Topic: 3344 Message: 3344

Just brought the 94 out of mothballs again to try to figure out what's wrong. One day it just started to receive really poorly. It will only pick up the strongest of local signals.

I use the 94 both on its own and hooked to a discone through an amplified splitter. I've swapped all the elements but the only thing wrong is the receive on the 94.

I've opened it up to look for obvious problems and found none.

It would be silly to get it repaired so if anyone could suggest some troubleshooting, I'm game (I have electronics experience). Otherwise it will be used to plug in local freqs when I need a spare.

Gracias,
jeff

Jeff,

Probably you've checked all this already, but. . .

Under good light and using a hand lens check the BNC connector's center contact. Make sure the contacts are positioned symmetrically and close enough together to grab the antenna's center pin.

Likewise, confirm that the ring external to the BNC's base holds it firmly in place.

If those are good, open the case and check the internal connections between the BNC connector and the circuit board.

Cable-ready TVs and FM receivers are protected against external amplifier voltage transients and oscillations. But some other receivers can be damaged by in-line amplifier oscillations. I do not know how well the Pro-94 holds up against amplifier oscillations.

73,

Steven

Check the solder connections on the antenna connector and the wire to
the circuit board. Inspect the connector itself and the solder joints
carefully with a magnifier under good lighting. In fact, inspect ALL
the soldering in the front end area with a magnifier. Replace the front
end transistors (2SC5065-Y). Check IC16, which controls the switching
matrix for the bandpass filters.

The service manual and schematics are in the file section of this
group.

Thanks. I'm starting to think the B firmware is a rewrite of the original 1.05 94 firmware, rather than a further rewrite of the A firmware. Which leaves the question of PC programmability still up in the air for the A (or the non-a - no comments from the R390 guys, please).

What's worse, I looked at the schematic and there appear to be two sets of serial I/O pins on the processor - one goes to the artifact J202 connector that is presumably for factory test/programming, and the other is unconnected. I would need to know how the I/O jack on the B is wired in. Chances are slim that this would work ... SWAG - the I/O jack is connected to the unused SIO port, and needs a cable with a RS232 level converter. But the cable on http://www.scannercables.com/ looks like 2 conductor??? Half-duplex? This is getting complicated.

I shoulda just bought a B last Friday.

I hadn't thought about it having a converter in the cable itself, I just assumed that it would be handled on board. If that is the case then I guess it would be prohibitive to make your own cable. I'm not cutting mine up just to check, sorry.

I made the twin lead jpole antenna from the link that you sent. I recalculated it for a lower frequency and installed it in my office behind a book shelf. I don't think that I'm getting any better range but the audio is very crisp and clear now. Transmitters that were coming through either very quietly or garbled are now crisp and clear! Best of all no one can see the thing other than the piece of coax running to my desk and even that is laid down next to my ethernet cables so it blends nicely.

Thank you for that one!

Jeremiah

I did a little research on cables for a few other scanners and found that most of them tended to have a bit of circuitry inside. This is definitely true for the Pro-92. There are a few sites with plans for them.

I don't know for sure that this applies to the 94, but I'm guessing it does. The circuits are relatively simple and can be built into the DB-9 (serial) connector.

How boring :)

I have a homemade discone in the drop ceiling at work, along with
another discone above my desk. I get the strangest looks.

I just tell people that I use them for bug sniffing because `they're'
coming to get me and I want to hear them before they get here.

Unfortunately it still hasn't stopped people from coming to my desk, so
I'm obviously not doing a good enough job.

Perhaps an aluminum foil hat.....

very nice! I'm planning on making a discone next but hadn't decided
where to put it.

I'm still very happy with the jpole, i was able to pick up ground
control and low altitude control from Indianapolis International
Airport today and I'm about fifty miles south in Bloomington
Indiana! Not too bad for $18 worth of pieces from Radio Shack. Now I
just need to get to lowes to buy a bunch of ground wire for a
discone!

By the way I would forgoe the aluminum foil hat were I you, it does
nothing to block the mind control rays from outer space and may only
serve to make you easier to find for their probes.

I lived in a very small studio apartment many years ago. Because of its size it didn't take much for it to look "cluttered!" I didn't want that to stop me from getting the most out of my scanner so I went to Rad Shack and bought their Discone. I hung it from the ceiling inside of a closet and then drilled a hole in the wall and attached the connector to a wall plate in my Bedroom/Living Room/Dining Room. Don't laugh... compared to any other indoor antenna it worked great!

3356. Pro-94 Programming / Interface Cable

Yahoo group: pro94owners
Date: 2005-11-30 22:52:36 UTC
From: Rich
Topic: 3356 Message: 3356

Direct from RS support.....

The Cat# 20-524, PRO-94, did not have a computer interface. The
newer Cat# 20-524B, PRO-94 will use 20-289 cable. RadioShack does
not offer software for the PRO-94(B) scanner. The preferred
vendor for the radio scanner software is the following:

Computer Aided Technologies
- http://www.scancat.com -
Order Toll Free or Order On Line
(USA Orders Only) 1-888-722-6228
(NON USA Orders) 1-318-687-4444
(Tech Support) 1-318-687-2555
(Fax Line) 1-318-686-0449

We would refer you to the following link:
http://www.scancat.com/scancat-lite-plus.html

The RadioShack 20-289 can be used to interface between your scanner
and your PC's software. Product information is available online at:
http://www.radioshack.com/
by entering the catalog number in the field at the top of the screen.

Please note that the software option is neither developed nor
verified
by RadioShack. As a result, RadioShack assumes no liability for
their
use. And all support of the software is provided by the
manufacturer
of the software.

To better assist you with future questions, please COPY and PASTE the
original email into your reply (especially America Online Users).
Failure to do so, may cause a delay in responding.

Thank you,
Carla

232 level converters aren't that though. Maxim makes an IC that does it
with a few external parts, or one can be built with a couple of
transistors and associated magic. As someone else said, it can be made
to fit inside a DB hood.

I'm glad it's working well for you. Keep in mind that the J-pole will
be more narrowbanded than the 1/4 wave ground plane. Sometimes half the
fun is experimenting with antennas.

I received my Pro-94B today and also downloaded the Scan CAT Lite Demo but I can't get it to read the radio. On one attempt I was asked to hold down the "4" button until 9600 appears. I am using the 20-289 cable. Are there any buttons I need to push on the radio to have it ready to be read? So far, I have programmed about 40 channels into Bank B and thought I'd use Bank A for the trunking systems in my area.

Any help would be appreciated.

Thanks,

dhe2wks

ScanCat will not read the radio even in the paid for version. It will only load it. You have to program SCL and then load the radio. One thing I did discover is that where it tell you to hold the buttons down, it also does not tell you when to let go. What I discovered is that you have to keep holding them down.

is there any need to balance the system if I wanted to run more than one antenna at once or can they just be run in series? I was thinking about making the ground plane next or maybe a discone to add to my current set up but I've not found any reference to using more than one antenna at a time.

In an ideal world, you would use a combiner to match imedances. A good wideband 75-ohm cable TV splitter in reverse might be worth a try. This being a RX only situation where we don't necessarily care so much about a 1:1 impedance match, you could just try a "T" connector and put the two antennas in parallel.

Expriment. Try crazy stuff. Report back with your results. Have fun.

I hate to be the bears of possible bad news, I previously owned an IC-T22 HT 2 meter trans., and the problem with the receive and transmitt, is that under the antenna, internally, the connections came lose and was impossible to fix, so your pro-94 may have loss that continuity. I have a pro 94 as well, I admit I have to get use to using its man features.

Best Wishes

From: Steven Coles
Topic: 942 Message: 3368

All,

For the reasons below, I built a Yagi beam antenna from telescoping elements sandwiched between 2 election sign posts. (No expense sparred here!) This arrangement takes about 3 minutes to optimize to any frequency between 80 and 220 MHz. (That's assuming I've marked the element locations and lengths on the sign posts and have a tape measure handy.)

I've only had my Pro-94 a few days. So far I like to search some relatively narrow frequency range during each listening period. I also like to have some control over direction as well as frequency.

Regards,

Steven

Steven:

Can you make a drawing and post it, or provide the dimensions for the antenna you 'developed'. I have the odds and ends
in my 'junque box', as I am sure many others in this group do. It would be interesting to have others be able to make what
you have and then compare notes as to their reception results, especially when compared with the 'rubber ducky' antenna
that comes with the scanner.

Thanks,

Dave

I confirmed today that this cable, and Scan Cat Lite will program the Pro-94B scanner.

I exported the frequencies I needed from my 796D file in Scan Cat Gold and imported them into Scan Cat Lite, then progarmmed the Pro-94B.

Topic: 2576 Message: 3373

The receive mode can't be changed. It's locked in FM (no WFM on this scanner) unless you are in the air band (108-137MHz,) in which case it is in AM mode.

The same IF path is used for AM and FM. Since the AM and system beeps are normal, the problem has to be around the FM limiter amp or the FM mute line. If the limiter amp is out of specs the scanner will not be able to trunk well. Is the scanner able to reliably trunk a system? If so, check that the mute line isn't being held low for some reason (pin 14 on the MC3361.) If it isn't, suspect one of the passive components coupling the FM AF out to the power amplifier.

From: Michele Prince
Topic: 3389 Message: 3389

Gretings & Blessings Everybody,

I just bought a Pro - 95, I want to make my own RSD file in excel. I have all but one file for the enteire state of Michigan.

So if somebody is looking for something specific, let me know.

I am wondering if there is any members within a 100 miles of 48237 that is willing to help me with this little project.

I am in the "Detroit Metro Area" by the zoo. I can send you an RSD file I have been looking at to walk you through where I need help.

Everyone have a happy holiday season,

"The Lord bless you & keep you; the Lord make His face shine upon you, and be gracious to you; the Lord turn His face toward you, and give you peace."

3395. Radioshack black/grey data cable

Yahoo group: pro94owners
Date: 2005-12-12 21:09:24 UTC
From: Gary R.
Topic: 3395 Message: 3395

Does anyone know *for certain* if the cheap ($5) Radioshack black cable will or will not work with the Pro94B and ScanCatLite?

I bought the cable today and downloaded the demo of ScanCat Lite (I don't want to spend the money on the full version unless I know it will work). The software seemed to find the scanner (94-B at 9600bps) so I loaded a free data file into ScanCatLite and told it to upload to the scanner. Since it's a demo, it does not actually upload anything, but simulates an upload. That process seemed to go fine with no errors, but I have no idea how realistic of a test it is.

Any thoughts? Hints?

It would be nice if the demo ScanCatLite would upload real data to the scanner, but limit the amount of data. Say, 10 frequencies or so. That would allow a more realistic test, without giving away a full-functioning program. Maybe I'll drop the author a note.

Thanks for any insight.

3400. Antenna Issue

Yahoo group: pro94owners
Date: 2005-12-13 03:31:17 UTC
From: ClaytonCountyNGa@aol.com
Topic: 3400 Message: 3400

I notice this afternoon that my antenna is loosening. I took the rubber antenna off. It is the actual piece that the antenna goes onto. That is something that looks like a washer/nut at the base. But on this washer/nut there are two slots. Like if I could get something in both of them and turn that would tighten it.

Any suggestions? Is this what I have to do? Do I need to take the back off it?

You can tighten the antenna (BNC) connector via this nut. If you're really handy/dexterous/crazy, you can improvise and do it with screwdrivers or whatever you find around the house.

A proper way would be to get the right tool. I'm not sure what it's called, but you can get a pair of needlenose pliers bent at an angle that will do this. Try Sears or your local hardware megastore.

3404. Copy and Paste - RadRef.com -> Scancat

Yahoo group: pro94owners
Date: 2005-12-19 02:17:37 UTC
From: Jim Westberg
Topic: 3404 Message: 3404

All,

Perhaps someone has a better way to do this, but I found a nice way to put data from radioreference.com into Scancat.

Here's the tip (Again, someone may have found something faster!):

1) Highlight an entire page of frequencies (other data and all)
2) Copy
3) Use the "paste special" function in Excel and paste as "text"
4) Since there will be a lot of other "junk," use the "sort" function to put frequencies at the top of your spreadsheet
5) Delete all the other lines/rows that start with text and not with a frequency
6) Then, by using the "text to columns" feature under the "data" tab in Excel, you can separate out the frequencies from the data that follows it.
7) After you've done that, you can copy and paste the frequencies right into Scancat

Regards and 73's - Jim K9IDX

From: Dan Lopez
Topic: 3405 Message: 3405

Hey guys. I'm new to all this. It looks like when I key in the frequency I want it goes to the closest 5kHz. I other words I was trying to go to 219.028 and it Is that the case? Can it be changed?

3406. System Choices on the Pro 94

Yahoo group: pro94owners
Date: 2005-12-22 03:27:26 UTC
From: highlandhippie2004
Topic: 3406 Message: 3406

It seems that there are many terms to describe similar systems. For example, there is Motorola I and II and IIi, EDACS, LTC, LTN, Motorola P25, LTR Standard, Motorola Smartnet, EDACS Wide, EDACS Narrow and on and on...

However, on the Pro 94, when I start to program a trunked system I have to guess where to classify these systems within the choice of:

E1 Motorola Type I, 800-MHz frequencies

Ed EDACS frequencies

E2 - 800 Motorola Type II, 800 MHz frequencies

E2 - 900 Motorola Type II, 900 MHz frequencies

E2 - Hi Motorola Type II, VHF frequencies

E2 - UHF Motorola Type II, UHF frequencies

Is there a resource on the Internet that would clear up the confusion. RadioReference.com is great for most things but doesn't mitigate my confusion about this. Thanks much and I'll remain 10-8.

- Rob

Dear sir,
That is not an option to be able to change the steps, depending on what band of frequencies you choose to receieve on it may also take steps in 12.2 Steps especially in the 23cm band and some of the lower bands. Otherwise, I hope you enjoy your radio and hope you enjoy the hobby of listening.

3409. Old guy new to scanning needs help with programming.

Yahoo group: pro94owners
Date: 2005-12-23 14:23:51 UTC
From: nadaclue5633
Topic: 3409 Message: 3409

Would one of you experienced PRO-94B owners e-mail me the data format required to put PRO-94B programming info into Excel? A template for the required Excel column headings would be great. I purchased a copy of ScanCat Lite to load data into my PRO-94B, but am very disappointed with the user interface and even more so with the supplied documentation. For someone new to scanning it is very lacking.

I have a lot of experience with spreadsheets and databases. Having the data format required by the PRO-94B would make using it infinitely more enjoyable. I would really appreciate the required formatting info for both trunking and non-trunking modes.

Thanks for any assistance anyone is willing to provide.

Topic: 3409 Message: 3410

In your Scan Cat Lite folder should be a Sample_Source file with headings and sample data.

Everyone is different, but I found the interface pretty straightforward.

If you get the data into an Excel file, are you going to import that into Scan Cat Lite to load into the radio?

From: dnreingold@softcom.net
Topic: 3412 Message: 3412

To alll the members of the Pro 94 Group:

Happy Holidays. To some, it is Christmas, to others it is Chanukah or Kwanza. And for some who do not have a religious
festival to celebrate, it may be just a way of getting to gether with family or friends to recognize the solstace.

No matter what you celebrate, being together with those you love and to eat specal, seasonal foods, and perhaps exchange
gifts, is what it is all about.

Take care, have a great week, and celebrate again with the coming of the year, 2006, which it is hoped will be better than
2005, and one in which there will be fewer, natural disasters, with so many lives lost and property distroyed.

Now, just 'fire up' your Pro 94 and enjoy this festive season.

I am joined in the above greetings by my wife...

Dave

Dave,

Thank you very much. Recently received Winter Solstice greetings from an astronomy-minded lady friend.

Whatever members celebrate, I wish you all a great season and a happy 2006.

Hearing a couple hams simplex dead on 146 here in Washington State's Sno-King area. They're advising each other to be careful not to get stuck in their chimneys. As we have a cold drizzle with a bit of wind, they're adjusting their gamma matches and each worrying about the other falling□hence the chimney worry.

Got the Drake 2B on 3890 kHz. Something there, but too weak for my indoor wire antenna. Other times I've heard some great sounding ham tube AM on 3879 to 3900 kHz. Thinking of building an up converter so I can search HF on the Pro-94

Wishing you the season's best,

Steven

3424. Re: help with programming

Yahoo group: pro94owners
Date: 2005-12-27 05:24:15 UTC
From: Steven Coles
Topic: 3421 Message: 3424

Almost.

If you're madly in love with everything about the Pro-94 except the ScanCat user interface, there's two more options.

The first is disassembling the software and writing something with a user interface you like.

The second is monitoring the bit streams between the computer and Pro-94, extracting the command codes, and writing fresh software to produce the codes in the way you want.

As the Pro-94 seems incapable of switching demodulation modes under software control, it still would not do what I most want. So I'm not taking the trouble to create alternative software.

I could get closer to what I want by adding outboard hardware. But then why not build a converter to my Grundig YB400OE?

Good listening,

Steven

Booger,

Start with the information on pages 58 through 64 of the Pro-94 Owner's Manual.

If you're in the USA, the five weather channels are in the 162.400 to 162.550 MHz range. At this location I hear 3 of them with a 5-element VHF Yagi. Another comes in on 410.575 MHz.

Find the web site for your area's equivalent of Intercept Northwest.

http://www.northwestradio.com/interceptnw/

Try the listings by state and country at

http://www.scanware-fccfrs.net/sw_frqsmap.html

happy listening,

Steven

3428. No Audio on Trunking Group

Yahoo group: pro94owners
Date: 2005-12-28 00:13:22 UTC
From: Bob Bailey
Topic: 3428 Message: 3428

I uploaded the codes that came with ScanCat-Lite-Plus to my new PRO-94B using the std cable from Radio Shack (20-289). I even tried to upload it a second time to be sure I had not screwed up the programming with my button pushing. Second time around I got "d-err" and "no. 54". (This is for Montgomery County MD http://www.radioreference.com/modules.php?name=TRSDB&sid=2142)

I can see the -- --- display. I can see the list display. I can see activity bars under the list display. Sometimes I can see the DATA indicator light. What I never get is any audio.

Some questions:
- How do I clear the bank and start over?
- How do I display the lists if they exist? (I tried holding SCAN down but got the s-bit display.)
- What am I doing wrong that I get no audio?

TIA... Bob

The 94a has weather channels already programmed in it in the 'services' section of the memory. press the "E" button at the bottom right of the keypad until you get to weather, it will scan to the frequency for your area.

Danny.

3436. 94b Programming

Yahoo group: pro94owners
Date: 2005-12-29 18:11:56 UTC
From: kc2erp
Topic: 3436 Message: 3436

Helloâ□¦

After owning the 94b since â□□Black Fridayâ□□ of this year, I decided to venture out and program the scanner with my laptop.

I hate like H--- to have to spend the 25 bucks to purchase the cable RS offers to program the scanner.

I decided to take the cable I use to program my Icom 706mkIIg. I have downloaded some freeware programming software and I know the laptop recognizes the Pro94

I downloaded the Scancat-Lite-Demo and it seems to be the friendliest with this setup. Trouble is, I canâ□□t see dishing out another 29 bucks for the software to see if it truly works or notâ□¦Help, Suggestions would be appreciatedâ□¦

Emil

3437. PRO 94 B software

Yahoo group: pro94owners
Date: 2005-12-30 02:41:21 UTC
From: catholicchet2
Topic: 3437 Message: 3437

I just purchased a PRO 94 B scanner.
I got the frequencies downloaded from the Radio Shack store's computer.
By purchasing software, could I choose what I want and where to put
the frequencies?
Add frequencies by hand into the software?
Can I print out in different ways?
What other things can the software do?
Is there a manual etc. explaining exactly what can be done?
--Chet

EMIL:
CAN YOU SEND ME INFO AS TO WHERE TO GET THE SCANCAT LITE DEMO AND
ALSO FOR THE FREEWARE SOFTWARE?
I'm trying to find out also if it would pay to buy the software,
cable etc.
I'd like to find out what exactly it does and if you can add or
delete from computer and arrange listings etc?
Otherwise might as well do it by hand.
I went to radio shack and they downloaded for my area, but not
everything possible.
I paid $75 on black Friday which was a good deal.
I'm thinking aboaut getting an extended warranty:

3445. download demo software PRO 94B

Yahoo group: pro94owners
Date: 2005-12-31 04:39:50 UTC
From: catholicchet2
Topic: 3445 Message: 3445

I downloaded demo software from ScanCat-Lite-Plus for PRO 94B,
It wouldn't let you do anything to scanner.
Couldn't even see about frequencies.
I had Radio Shack download the frequencies from scancat lite plus from
their computer. Only 65 came up.
If I buy the software, cable, cd's from 2 companies etc. it could add
up and then I might not do much better than I have from Radio Shack.
I really don't know what to do? Sure wish if demo let you use full
version even for a day.

It's considered good form to edit quoted replies for brevity and
clarity. Also, when forwarding a message, delete any headers, as they
may contain email addresses that people don't necessarily want spread
around.

Do a Google search on "netiquette" for more info.

There are differing schools of thought on that too. Much discussed in
the netiquette forums. See below.

Jim,

Exponential increase in groups and postings makes original
netiquette suggestions obsolete. The example is very contrived.
Usually we know the context of what we're reading□often because
we've just read the post being replied to.

I don't have time to search a post for new content. If I don't see
the new content immediately, 95% I'll I move on without searching
for it.

Happy New Year,

Steven

I appreciate your comments, Steven. I agree, the most annoying thing in the world is to scroll through five screens of quoted text to see a one-line response saying "I agree completely!" IMO, proper editing eliminates the need to "search" for new content. Brevity is the key, one or two lines is generally sufficient to establish context. I tend to prefer bottom posting because the flow makes more sense to me (or, perhaps more accuratly, it's easier to make sense of the flow), and because that is the way I learned to do it back in the days of dialup BBSes. I do top post on occasion, if it seems appropriate. To each his own. But, we're drifting off-topic here. Bottom line, I wish more people would just edit quoted replies, whether they top- or bottom-post.

I agree. The ScanCat demo, as is, is useless. I downloaded it to see if I could use the white RS cable (I know now that I cannot). I attached the cable to the computer and scanner (94b), and ran through a test upload in ScanCat. It *appeared* to work fine. Had I not learned better later, it would have seemd that the white cable would work fine.

I'd like a demo that has a limit of 10 frequencies or something. It would be totally useless to steal, but it would give real-world results when demo-ing.

I disagree! I don't know how typical I am or not, but I belong to about 6 or 7 Yahoo Groups plus various other tech and computer groups, etc. In other words I get a LOT of email and I read my mail at several different times throughout the day and evening.

When I open up an email I want a brief reminder of the subject matter first and then someone's reply next. It's simply a logical order.
Bruce.

I'm in the same boat, Bruce. Sometimes it's several days before I get
to low priority messages. I agree with what you are saying.

I may have actually stated my dislike of the ScanCat demo on that forum already. It was either that forum or this, I don't remember. I'm such a newbie to scanning and ScanCat, that I'd rather spend some time reading the forum(s) and learning before I *really* start complaining about something.

3456. trunk scanning vs trunk search

Yahoo group: pro94owners
Date: 2006-01-02 05:37:49 UTC
From: mlkpro94
Topic: 3456 Message: 3456

I'm new at this and somewhat confused. I have a 94A. What's the difference between trunk scanning and trunk searching. I'm trying to monitor an EDACS system and have been able to store the frequencies and have the 94 find the data channel (p. 41 of the owner's manual) I'm really confused about what p. 42, "Searching a Trunked Bank" is trying to explain. I if Trunk Scan banks that contain conventional and trunked frequencies I can hear some traffic on the trunked bank. But if I Trunk Scan Search the trunked bank I can hear much more traffic. Can anyone explain this? I also have one other question there always sems to be static on one of the trunk frequencies if a do a normal scan of that bank. Any idea about why this is happening (it's not a birdie).

Thanks,

Mark

3461. Help with Loudoun Co VA Trunked system

Yahoo group: pro94owners
Date: 2006-01-04 01:59:43 UTC
From: Dave
Topic: 3461 Message: 3461

Hi all,

I got a pro94B for Christmas and I'm having a little trouble getting the trunked system to work ... at least to hear it correctly.

Loudoun Co. VA has an 11 channel Motorola Type II SmartZone according to radioreference.com

http://www.radioreference.com/modules.php?name=TRSDB&sid=1611

I programed the 11 freqs in as Mot.typeII 800 mhz and when I trunk scan, it will stop on a data channel (I guess), and all I will hear is static, like data transmission. Even when I do a conventional scan of the 11 channels, I never hear voice, only data sounding tranmissions.

What gives? As the transmissions encrypted? Am I using the wrong type of radio? Is the data transmitted in digital and I'm trying to received on an analog radio? Help please!

Dave C.

3462. RE: [pro94owners] Help with Loudoun Co VA Trunked system

Yahoo group: pro94owners
Date: 2006-01-04 02:33:28 UTC
From: Rik Rasmussen
Topic: 3461 Message: 3462

Sounds like they have gone digital.

If they were still running a mixed mode system, with a 3600 baud control channel, your scanner should stop on the control channel and start trunking the talkgroups, even if you don't get any audio.

The fact that it isn't, seems to indicate they may have upgraded to an all digital Astro 25 system that runs a 9600 baud control channel and only has digital audio.

With Motorola service support coming to an end for many of the old analog only systems, many have recently, or will soon, be upgrading.

You have to program the id's in order they way they are supposed to be listed. If that is done and it is just beeping a little at the end of the conversation then that is all you can do. Their is no way of changing this.

Are you hearing a steady beeping or more of a chirping beep at the end of each transmission? If it is a
chirping type beep, then it is my understanding that it is what ir known as a unit identifier.

This is setup to indentify each radio. At least that's what I was told by a formor employee of the radio
company that setup a local EDACS System in this area.

It sounds like the scanner either isn't trunking or is trunking improperly.
Are you seeing the talkgroup ID number during the transmission?

Vermillion, Matthew wrote:
>
> You have to program the id's in order they way they are supposed to be listed. If that is done and it is just beeping a little at the end of the conversation then that is all you can do. Their is no way of changing this.

This is correct. Watch the little square blocks that indicate channel activity on the top line of the scanner.

If the scanner is SWITCHING to a channel that only has beeping on it, or displays a new trunk group after a transmission completes at the time you hear the beeping start: Then you don't have the channels programmed in the correct channel number order.

The scanner is seeing the data channel messages that "channel 6 is active with talk group XX-XXXX" and switching to it. If you're hearing beeps at that point, and you're not hearing voices, then the channels are not programmed in the correct order in the scanner.

EDACS trunk scanning requires you to put in the channels in the scanner in the correct virtual channel number order.

If you're just hearing a single beep or two after every transmission and the scanner is not changing channels to get to it, there's nothing you can do about that... it's just the EDACS system transmitting beeps after the user radio unkeys. I hear a single beep after every transmission on the Denver EDACS system, for example.

On some EDACS systems, GE had channels randomly transmit tones or beeps when not in use so that traditional non-trunking scanners would have a problem trying to scan all the channels to attempt to follow a conversation in the old standard scanner fashion.

On a trunk-tracking scanner, the scanner is following "commands" from the data channel to switch to specific channels.

For a while I had virtual channels 23 and 24 swapped on the Denver system, and only figured it out by watching how the useage pattern worked during quiet/non-busy times -- I could hear the channels "jump" over a couple of transmissions every 23rd transmission on the entire system... Denver's EDACS tends to go straight through the channels and then wraps around, but different systems don't have to do that. There may be multiple transmitter sites and/or simulcast channels that will affect how the engineer set up the system.

Nate

lubbock_weather wrote:
> it is 5 beeps everytime...

That's how many times Denver's EDACS system beeps also after every transmission, but the Pro 94B seems to skip away from it as soon as it starts. Are you sure you're receiving the system well enough?

If I'm using the scanner hand-held and have it in a noisy location, it "sticks" on channels when it can't receive the control channel well. Are you hearing the system clearly, or noisy?

You might try a better antenna... or at least step outside and find a good spot to listen from.

Also are you sure you're in trunk mode and tracking trunks? Are you seeing talk group ID numbers on your screen when you hear transmissions, or are you seeing frequency numbers?

If not, you're probably in normal scanning mode: There's a mode you can put the scanner in that will just scan the frequencies normally and it will act like you're describing. If you don't see "search" on the screen, you're not in the right mode, I think.

My scanner's not here right now for me to look, but there's good documentation on the web via a Google search, and someone else posted a link here last week (look in the archives) on how to use the 94.

Nate

3477. Best Antenna for Mountain Area

Yahoo group: pro94owners

Hi, my name is Kristina, I'm a 35 yr old mom to my 3 yr old boy, living in Suffolk County, LI, NY. I have been scanning for almost 10 yrs now, my first scanner was a Radio Shack model w/ only 20 channels. _and 512 mhz...and received Cellular...oh the convo's I heard! LOL) I currently have a Pro 90, but haven't listened faithfully in about 3 yrs, because I'm in a not-so-great area. I am looking to set it up again soon. There was a Suffolk Police Chopper flying around tonight, and I was going NUTZ, I didn't know why!!!!!!!! ;0)

Anyway, my reason for joining this group, is, I am trying to program a friend's Pro 94, and for the life of me, I CANNOT get it to work!! It's not picking up the data channel to start scanning the Fleet ID's. My Pro-90 was a breaze to program, I still have everything in there, that I programmed in years ago. (The Suffolk Police was using both trunked and convential freq's for years, it was a long process switching over, and finally did about 2-3 yrs ago)

Suffolk County NY uses a Motorolla Type II Trunked System, in the 800's. (http://www.fordyce.org/scanning/frequencies/suffolk.html#A1)I have all the freq's programmed into the 10th bank of B.

I found the manual online, and I'm going to go over it once again, to see how I do.

Any helpful advice or tips or ANYTHING would be greatly appreciated!! I've had my friend's scanner for 3 months now, I feel so bad I haven't programmed it yet!

ps--the scanner is a 20-524, no A or B after the model #. I have AIM and Yahoo IM w/ Gage9702. I'd be more than happy to Chat w/ anyone that is willing to help! And here I thought I was a novice at programming these things! LOL

3481. Re: Best VHF & UHF Antennas for Mountain Area

Yahoo group: pro94owners

From: Steven Coles
Topic: 3477 Message: 3481

Coolootaii,

The best antenna depends on whether your interests fall into
using the entire scanner spectrum or a small percentage,
using the scanner for fixed or portable listening,
using the scanner for reception from one direction
at a time or monitor 360 degrees around your
location, and
have an unlimited government budget or a US$10 limit,

Being in mountain (valley?) let's assume a couple 10s of MHz between
80 & 300 MHz, fixed location, most signals from one direction, and a
5-pound budget. Clearly the best antenna would be a homemade 3 to 5
element Yagi assembled from scraps of wind-downed TV antennas.

Similar, but near a mountain peak with signals coming from all
around you: The best low-budget antenna would probably be a
suspended wire ground-plane or disc-cone. (The disc-cone receives
over a wider band of frequencies.)

For packing through mountain trails and setting up at camp
locations, a wire ground plane rolls up nicely and can be unrolled
to hang from a tree. But above 350 MHz a portable disc-cone can be
small and receive over most of the scanner's UHF spectrum.

Happy listening,

Steven

If it is a 94B, on the right side (as you look at the display) should be a 1./8 in jack marked pc/if. This is for the PC interface connection to go in. I program these daily at the RS store I work at using Scanlite. Sometimes it takes more than one try at it, but it does work.

I words of 1 syllable - NO.

FCC proclaimed that since it is illegal to listen to cell phones, no scanner made after a certain date would be capable of listening to cell conversations. Besides, since most of the phones as now digital and you have an analog scanner, the only thing you might hear is a hisssssssssssssssssssssssss.

Back when it was legal to listen to cells, I had a modified pro 2006 and lived about 5 miles from a large cell site in Phoenix AZ. I worked until 10 pm so when I got home, I would site in front of the computer and turn on the scanner. About the only thing I ever heard was some dude dissing his girlfriend because she talked to somebody he didn't like. It was more interesting to watch the grass grow.

Sure. Just reverse engineer the microcontroller circuit, figure out how
to hack past the read protection security for the microcode in the
microcontroller, dis-assemble and rewrite the microcode, and reprogram
the microcontroller with new code. So easy, everyone's doing it...

to hack past the read protection security for the microcode in the
microcontroller, dis-assemble and rewrite the microcode, and reprogram
the microcontroller with new code. So easy, everyone's doing it...

Edward and Jim,

There's also the purely analog and rather bulky method 1960s hams and SWLs used to receive stations their receivers would not tune.

However, I doubt TDMA buzz has anything special to offer. Might as well tune to digital signals the Pro-94 can receive without modification. Easier yet, just make a dial-up internet connection and listen on your phone.

Another option is buying a Radio Shack 60-4431 toy motorcycle which uses a serial digital control chip to modulate a 49.860-MHz Part-15 transmitter. As digital goes it's fairly melodic. Besides 49-MHz RC (radio control) uses a small variety of analog and digital modes. You hear more sounds.

Another advantage of RC is each child has an individual style. You can learn to distinguish which child is playing with which toy.

Now excuse me. I just found a real bargain on a geriatric medicine text. I've got some exciting reading in store.

Happy Listening,

Steven

Does this cable connect to a serial port? If so, it probably has a
RS232 to TTL level converter built in. Not to hard to make. Google
should turn up some schematics.

Did you read the "official" manual online, or the "easier to read" manual, available here:

http://marksscanners.bravehost.com/94AB/94AB.html

If you haven't tried the "easier to read" version, it's probably worth looking over. I can't offer much more help, as I've only had my 94 for a month and haven't really had time to devote to learning it yet.

Good luck with it!

Hey there Lubbock, I seem to recall that I had a similar situation with beeps with the EDACS/ERICCSON or whichever. Not only did the frequencies have to be programmed for those systems so also do the banks. When you enter the ID's there is a point you can change the bank also. As we all know all to well that the Pro-94's are not user friendly.

3513. Trunking Scanning

Yahoo group: pro94owners

From: wmorobertson
Topic: 3513 Message: 3513

It's true. The manual that comes with the PRO-94 leaves much to be disired. Can someone tell me if I have this thing programmed for trunking? In Bank B, I have my local Huntsville police frequencies programmed-- that was pretty easy. The question is, is trunking automatic? The reason why I ask is, that when I do press the TRUNK KEY on the scanner, I hear nothing (yes, the squelch is open). When I disingage the TRUNK KEY, I hear the the police action. Seems like it should be--- if the TRUCK KEY isn't activated, I shouldn't hear two way conversations on the channel. Any help is appreciated. Thanks all.

RadioShack May Close 400 to 700 Stores
Friday February 17, 1:40 pm ET
By Steve Quinn, AP Business Writer
RadioShack May Close 400 to 700 Stores As Fourth-Quarter Earnings Plunge 62 Percent

DALLAS (AP) -- Electronics retailer RadioShack Corp. on Friday said fourth-quarter earnings dropped 62 percent and disclosed it plans to close 400 to 700 stores and two distribution centers as part of a plan to improve its financial performance. Its shares tumbled nearly 8 percent.
"We must close underperforming, low-volume stores that are draining resources of the company," president and chief executive Dave Edmondson told analysts Friday morning during the second of a two-day analyst meeting at the company's Fort Worth headquarters. "We will be vigilant with costs and improve performance in a very sustainable way."

The company said it could not project the number of job cuts until it identifies all the affected stores, but 88 employees will be affected from the distribution center closings in Charleston, S.C., and Southhaven, Miss.

RadioShack said the stores it plans to close are company-operated. There are nearly 7,000 RadioShack stores operated by the company or dealers, and more than 700 wireless kiosks. It also has more than 100 stores in Mexico.

Edmondson and the company's board spent most of the week defending errors in the CEO's resume, which were revealed in a Fort Worth Star-Telegram story. But Friday, he focused on the company's performance.

Its shares sank $1.58, or 7.6 percent, to $19.17 in midday trading on the New York Stock Exchange. It fell earlier in the day to a new 52-week low of $19.02.

The profit decline reflected a $62 million writedown in the value of its inventory, higher promotional expenses and a merchandise shift.

It earned $49.5 million, or 36 cents per share, in the three months ended Dec. 31, down from $130.9 million, or 81 cents per share, a year earlier. The company earned 38 cents per share in the latest quarter excluding the affect of an accounting change.

Revenue grew 5 percent to $1.67 billion from $1.59 billion, helped by a 4 percent increase in stores open at least a year.

"Sales results were good in many low-margin non-wireless categories; however, we experienced lower sales in high-margin categories," Edmondson said in a statement. "In addition, wireless sales and profits were below our expectations."

For the full year, the company earnings fell to $265.3 million, or $1.78 per share, from $337.2 million, or $2.08 per share. Revenue climbed to $5.08 billion from $4.84 billion.

The company said net income was lowered by $19 million from transition costs related to the termination of its agreement with Verizon Wireless, with most of those costs in the fourth quarter.

RadioShack Chief Financial Officer David Barnes told analysts the decline in profit came from inventory writedowns and cellular phone equipment sold at a loss.

"Some aspects are easy to quantify, some are not," Barnes said. "What I can't quantify is the impact of the wireless transition on our sales due to fact that we have less inventory and less active promotional activity."

The analyst meeting ends a tumultuous week for Edmondson, which began with a published report highlighting the resume inaccuracies. Edmondson had stated that he earned degrees in theology and psychology from Pacific Coast Baptist College in California.

The school, which relocated to Oklahoma and renamed itself Heartland Baptist Bible College in 1998, said Edmondson completed two semesters and that it never offered psychology degrees.

On Tuesday, the company's board issued an unsigned statement that it stood behind its CEO despite the discrepancies. Edmondson issued a statement Wednesday taking responsibility for the errors and, separately, the board said it would hire outside lawyers to investigate the errors.

Edmondson, 46, joined RadioShack in 1994 and has been CEO since May, when he was named the hand-picked successor to Leonard Roberts.

Earlier analysts said they were not concerned with the resume flap, saying RadioShack has more serious performance issues.

AP Business Writer Lisa Del Greco in New York contributed to this story.

From: Mike
Topic: 3527 Message: 3530

It's a hard curing epoxy. The only way to get it off is by mechanical means. Odds are very good you will cause much damage by removing it. This is intentional. The FCC wanted to make sure the device isn't able to be modified to receive analog cellular phone transmissions and this is one way Uniden was able to comply.

Although - every PRO-94 I've had apart only had the epoxy on the programmed microcontroller, no passive components were touched.

>anyone knows what will get it off. I have some resistors to fix and

If the scanner won't put out audio and stop when the squelch is full open it is almost certainly a squelch gate problem. Even a dead IF path will open the gate when full open.

The service manual has the schematic and decent repair details. It should be availble in the file section, if not e-mail me direct and I'll get a PDF copy to you.

From: Mike
Topic: 3531 Message: 3537

If you are in search mode simply press L/O when the talk group is active.
If in scan mode, either do not include it in the scan lists or lock that
channel out of the scan list.

>Can I block out a talk group? If so, how do I do it?

3538. Scanner Programming Question

Yahoo group: pro94owners
Date: 2006-03-05 00:15:28 UTC
From: Joe
Topic: 3538 Message: 3538

I have the ScanCAT Lite Program. When I get ready to dumo the data to the radio, I plug it in and get the "wired" message. I then press and hold "4" until the display changes to 9600, (it ususlly goes back to "wired pretty fast. I then dump the data to the radio. My problem is:
1) It never gives me the "done" message.
2) It doesn't seem to be putting the data into the radio.

What am I doing wring?
Thanks... Joe - N7JEH

From: kc7mwp
Topic: 3546 Message: 3549

Where did you hear that they were disco'd? They are still available, even if through the web site.

Clay, why do you want a 94, the pro 97 is on sale for another couple of days at the same price and is a better unit. It has the alpha display and you can get air if you want it.

3551. RE: [pro94owners] Question about 94B

Yahoo group: pro94owners
Date: 2006-03-14 15:05:32 UTC
From: kc7mwp
Topic: 3546 Message: 3551

That's like saying the end of the world is coming. Whoever told you was definitely playing it safe, especially since everything get disco'd eventually. But until you see a $x.97 on the price tag, it has not been.

Right now they have reduced the price to 149.99 and it could be a sign that they are trying to sell them out. It is/was a good scanner but the pro 95 did everything the 94 did but also had alpha readout. And I think the have a lot of them left in the warehouse because the 95 sold fast. The 97 replaced the 95 and it is at 149 also. I think the 94 might be around a while because, let's face it, if you have the chance to buy something that does everything your scanner does plus a lot more. Its a no brainer. I have two 95's but am looking at the 97 because it can get the milair traffic. And I haven't seen on of those at a decent price in a long time.

3552. pro 97 and pro 94, comparisons

Yahoo group: pro94owners
Date: 2006-03-15 17:50:35 UTC
From: boeing377@aol.com
Topic: 3552 Message: 3552

I bought a Pro 97 on sale for 149.95 and really like it. It is more useful and versatile than my trusty 94B. The signal sniffer function built in to the Pro 97 appears to be the same setup an those really expensive setups sold by Optoelectronics which couple a freq counter output to program a scanner freq. Allows lightning fast freq ID of nearby transmitters, waaay faster than a traditional limit search with a scanner. It also gets mil aircraft in the 225-400 MHz AM band, can scan CB and VHF marine by channel number and has a very well lighted keyboard and display. Get one, you will not regret it. It will not decode digital voice, but it will do just about anything else you'd want in a handheld scanner.

3553. Pro 25 Leather Case Needed

If RS says they don't have it, you are at a dead end with them. There are 2 other alternatives tho. You can see if a regular case for a two way radio will fir, i.e. Motorola/GE/Maxon or any other brand. Second, you can try out your hand a making one out of some leather you might be able to get at a hobby shop. There are also some cordless phone cases that fit on the belt that might work.
Good Luck

Topic: 3556 Message: 3556

I am looking for Anchorage members to discuss local trunking freqs. Pls let me know if your here!

3557. Pro-94A scanning delay?

Yahoo group: pro94owners
Date: 2006-03-17 16:13:30 UTC
From: the_big_steve_05
Topic: 3557 Message: 3557

when i scan conventional freq's the channel delay works.
when i scan trunked freq's the id delay works.
BUT when i try to scan both the conventional and trunked freq's together the scanned will not delay no the conventional freq's. as soon as the transmison stops it continues to scan, it does not delay for the 2 secs like it should. yes i have delay turned on for the conventional freq.

Is this how it is suppose to work, or should it delay.

Thanks Steve

Cellular stuff will work well in and near the cellular bands (which are
blocked in the 94 anyway). It will most likely work poorly or not at all at
other frequencies.

Yeah, that's pretty close. The antenna should work fine for that. The amplifier is another question, though. If it recieves power from the cell phone, it won't work with the scanner. If it has a seperate power feed, it may help your recieve. I would try just the antenna by itself first.

From: Dave
Topic: 3565 Message: 3565

Hey Guys,

Well todays my B-Day & my wife bought me a pro94, she gave it to me when I woke up this morning.
I've wanted a scanner for a while and now I have it. This thing is COOL!! Radio Shack set it up for her last night but I guess the sales guy didnt know much about them so I don't know how far into the progam he got, it does work.
This is my 1st scanner so it will take a while to figure out and even longer to read the postings on this board.
I'll read the OM & the Board before I ask questions cause I'm sure any question will be here somewhere.
BUT.....how do I know if it is 94a or 94b?
Dave

The 94B jacks into a PC for programming.
A 94A uses your fingers.

I believe that's it.

Are you sure it is a Talk Group ID and not a frequency
(Channel), if it is a frequency, it may not be in
trunk mode and may be recieving a control change.

Sometimes it's the simple things!

If it is on a Talk Group, then it is probably a
digital signal, although I have never had the pleasure
of hearing one. I thought they sounded more like white
noise than pager traffic, pager traffic is usually
sent at a much lower baud rate.

>>> Sometimes it's the simple things!<<<

That's right. One time my 94 quit trunking and I thought it had gone south until I discovered that my 895xlt was doing the same thing. After a week or so of going nuts trying to figure why, I found out that the city had added 10 more frequencies to their system and moved the control channel to one of the newly added freq's. RM~

3575. Intro & Mod

Yahoo group: pro94owners
Date: 2006-04-05 06:20:13 UTC
From: Loyd Samples
Topic: 3565 Message: 3575

Since this list has been so kind as to teach me how to work the thing, I thought I'd give what little I may have to offer.

Hi. I'm Loyd and I bought my Pro 94 at a pawn shop for $40.

It had no antenna (easy enough fix) and it ate the AAs that it was designed for (not so easy).

I'm a photographer and when I'm out shooting pics, I tend to put a lot of time on a scanner.

Since the AC adapter stepped down to 9v, I threw away the AA cartridge and carefully dremeled out the remaining area to accept 2 9v batteries wired in parallel. I didn't even have to solder the leads into place.

Now it isn't only cheap, but works good AND long.

Best damn $60 I spent this year!!!

Any like experiences?

Could the Pro 96 take the same mod?

Would it need to?

D. (Yeah, I know. My name's Loyd - but that's my grampa. I've always been just plain old D.)

3576. RE: [pro94owners] Intro & Mod

Hey Loyd,

There are two power input circuits. The external is designed for a 9 volt input because it goes into a charging circuit and the voltage is divided in sub circuits. So I'm not sure that putting 9 volts directly on the 6 volt battery input is such a good thing. It may do some (heat) damage over a period of time. So please let us know if you experience any problems in the future. That's quite a unique mod for sure. (First time I ever heard of it)

What would really be awesome, would be to use a large 6 volt lantern battery. Now THAT would give you a long run time. I'm guessing you'd get at least an entire week out of it. LOL Unfortunately they're so large, you'd have to drag it around with you, and strap it to your belt with electrical tape along side the scanner. ;-) Perhaps I'll try that experiment some day, and post the results. I don't even know what the MaH rating IS on one of those batteries. But I know they run a flashlight for a LONG time. And an incandescent light bulb is a high current, high drain device.

Regards,
"Superhiway"

ps. I personally wouldn't attempt the 9 volt mod on my own 96. It cost way too much for me to accidentally fry it to death.

Most electronics will run well slightly over the nominal design voltage. I've run 9v things from 12v, 6v items on 9 and 12, etc., with no ill effects. Some extra heat is to be expected, but is usually not a problem. That having been said, I would still advise caution unless you have enough electronics knowledge and experience to evaluate the device in question.

I was skeptical of the 9 volt battery idea, since 9v batteries use smaller cells and conventional wisdom is that they are lower capacity than thier AA and above cousins. I was surprised to find (at http://www.solarbotics.net/library/pieces/parts_elect_pass_batcomp.html) that 9v Alkaline batteries have a capacity of 595 mAH! This puts them on a par with the classic AA NiCd. Two of them in parallel gets you in the area of AA NiMH cells.

An interesting idea indeed.

When I got it apart, I noticed that there was no mechanical cooling, no real heatsink or even so much as a ventilated case. Considering the heat from normal operation on a 9v supply and charging apparently didn't warrant any of those things (and as I didn't notice any heat creating step down transformer) it didn't appear to me that heat was an issue with the designers when they put the thing together. It has just run and run and run ever since. I really need to load a fresh set of batteries and see just how long it will go before I get a beep and then the subsequent low power shut down.

I had very poor results with both NiCads and NiMH cells. That's what led me to the experiment. I'd get two to three days of my usual work load from a set of four - and those things get expensive! Now I'm getting up to two

week of the same level of operation. I'll really have to just time how long a constant use scenario takes to kill a set of the 9v's.

And at $40 how could I say no to an excuse for a little hot rod under the hood?

Wouldn't an increase in voltage in the circuit also reduce the amount of
amperage required for operation?

Nope, it doesn't work that way. Increasing the voltage will increase the
current drain essentially proportionatly.

I=E/R - it's not just a good idea, it's the law.

Yahoo group: pro94owners
Date: 2006-04-10 21:47:37 UTC
From: Joe
Topic: 3584 Message: 3584

Is there an easy short-hand way of putting an entire fleet in the scan banks without programming the entire list of subfleets? ie FD is 14-001 through 14-999. Is there a way to listen to all fire related traffic without adding all talkgroup id's? I know you can search, but then you have to listen to all TG's and lock each undesired one out individually.

Thanks in advance...

Joe

Simply program the partial group "14-" into one of your trunked channels.
You can then either manually select that channel or include it in a scan.

Ronald, Nope that does not have a program that sends the information to the scanner. Just a driver for the usb conversion, I got this and no luck. Scanner application software is not included with this 20-047. But thanks for the help

Check for a free program at www.parnass.org. Bob Parnass has created a variety of scanning programs for scanners. I
have his one for the Pro 92. I don't recall if he has created one for the Pro94.

Don't need a picture... just look at the sticker on the back of the radio where the serial number is. If there's a letter 'B' as part of the model number, you've got a 94-B.

3612. Programming Pro-97 and Pro-94B

Yahoo group: pro94owners
Date: 2006-05-01 19:57:34 UTC
From: Brad
Topic: 3612 Message: 3612

Greetings and thanks for reading.

Son and son-in-law have a pro-97 and pro-94b. Finally figured out how to use win97 to program the pro-97 scanner (at least I think I have it figured out. figured out how to get win97 to show frequencies, etc. whether it works or not remains to be seen).

Since both live in the same general vicinity (Milwaukee) what is the best way to get the same frequencies programmed into both scanners? I figured Scancatlite, but that has left me totally confused. Downloaded demo and cannot seem to get anything figured out on that. Do you have to manually type each and every frequency into that program? I cannot for the life of me understand how to import frequencies/settings, etc...

I could try and print out the info form win97 and the type into scancat, but that would take about as much time as manually entering the same info into the scanner.

Thanks so much for any help that anyone could advise. I am at a total loss on this one.... (besides that, I am not sure I understand how to manually program the trunking frequencies, etc...)

Brad

Go back to the ScanCat. Take the Pro 94 and read it, then take the 97 and load the 94 frequencies into the database. then you can load the 97. You will have to put the text in, but its easier than doing it on the phone. I have done this so I know it works.

Yahoo group: pro94owners
Date: 2006-05-03 18:24:04 UTC
From: Brad
Topic: 3612 Message: 3616

Ok, lets see if I get this right....

Use Win97 to load the pro-97 scanner. Then take the scancatlite and read the pro 97, then upload that info into the pro 94?

I just don't understand how to manually get all the info into the scancat lite program without typing all the lines, etc.... and at this point in my learning curve I don't understand the talkgroups, settings, etc of the trunking.

Will this become clear as I start to enter the info? I finally did get the info from radioreference.com into the WIN97 program, I think. (one error--on the trunking banks I used the 00 channel for the first channel used and learned later I could not. I copied and then pasted at the end of the list to move the info down. Hope that works). I can see this taking hours if I have to bring up the WIN97 program and the scancatlite program and enter then info manually, flipping from screen to screen on the computer.

Thanks for the reply!

Jeff,
You should go into the group archives. That questioned was just answered a couple of days ago... go to http://groups.yahoo.com/group/pro94owners/messages and look at messages number 3607, 3609, 3610, 3611, 3614 and 3615.

73,
Glen N7GOT

3619. Question-Problem

Yahoo group: pro94owners
Date: 2006-05-05 04:36:48 UTC
From: ClaytonCountyNGa@aol.com
Topic: 3619 Message: 3619

I have a problem. I was wondering if anyone else has this same problem.

I recently made one of the RS-Pro94s a car unit. LOL, I came across a power cord that I did not know I had. I realized now it has saved a LOT on batteries. Duh!

Here is my problem. 150.9950 is Clayton County's District 2, CSI/ID/Photographer, and Jonesboro Police frequency. I have it on number 6. Regardless if I am 500 feet or X amount of miles from the tower(s). It wants to lock up. Like static or something, until there is someone talking. It prevents it from scanner. If I moved it around it might stop.

My question is what causes this? How can I prevent it? Should I attempt to reprogram it? Should I move that frequency? Has anyone experienced something in a vehicle that might cause interference?

From: SuperhiwaY
Topic: 3619 Message: 3620

That frequency is very close to 151.000, which on many scanners, is a birdie frequency. A good way to test that, is to take off the antenna. If it still locks up, then it's a birdie.

Here's a clip from the owners manual regarding birdies for the Pro-94:

Birdie Frequencies
Every scanner has birdie frequencies. Birdies are signals created by the scanner's internal circuits. These stray frequencies might interfere with broadcasts on the same or similar frequencies. If you program one of these frequencies, you hear only noise on that frequency. If the interference is not severe, you might be able to turn SQUELCH clockwise to cut out the birdie.

This scanner's known birdie frequencies (in MHz) are:
162.400 162.475 162.525 162.425 162.500 162.550 162.450 41.6000 145.6000 165.3000 171.2500 407.7625 407.8125 413.1750 413.2250 415.0000 435.9250 455.7375 465.6500 485.4625 489.2500 823.8000 899.2375 906.4125 906.5875 926.7000 1290.7000

Hope that helps.

If it's a birdie, then it IS the scanner itself, that's causing the problem... But I know what you meant.

Does the same thing happen on any other frequencies? Try to program in some of those birdie frequencies and see if you get similar results.

3624. PRO-94 ~wired ~

Yahoo group: pro94owners
Date: 2006-05-09 03:47:22 UTC
From: james1sback
Topic: 3624 Message: 3624

I purchased a PRO-94 knowing it had a problem. It shows "wired" after being turned on.

Here's the list of things I have done:

* Pressed 2 + 9 while turning on the scanner to clear the settings
* Use the PC/IF cable (which works on my PRO-95) to clear "wired"
* * Set serial port to 8, N, 1 and 8, N ,2 with no success
* * * Used demo of Scan lite
* Verified PRO-94 was running at 9.6Kbits by pressing the "4" button for 2 seconds

After all the steps above I have found NO success.

I could use some constructive help to resolve this issue. Both the cable and serial port are working. I can content my PRO-95 with no problems.

The 94 will show wired whenever something is placed in the pc/if space. might wantt o take a look to see if the connnector is bad.

Thanks edc for the suggestion.

I disassembled the PRO-94 and located J203 (PC/IF) jack.
J203 has three solder points. Two points are common and one isolated
until a plug is inserted. This results in three common (or shared)
points. Hope that makes sense.

```
-------------------------------------------------------------
Solder points for PC/IF jack

J204 * common
* switched via plug insert
* common
-------------------------------------------------------------
```

The tip and ring should be RX (receive) and TX (transmit). But they
are all common electrical points. Which confuses me. The service
manual posted on Pro-94 user group DOES NOT include a reference for
J203 in either the schematics or parts.

I need a schematic that does include the J203 jack and the modem IC.

Any constructive suggestions are very much welcome at this time.

Regards

From: james1sback
Topic: 3624 Message: 3627

Removed J203 from the board. Note: The manufacturer in China uses
a very rigid solder. I assume it has more tin than lead. Use a
higher wattage (+30 watt) soldering iron.

Retested pro-94 scanner with J203 removed and continue to see "wired".
Both common solder points for J203 showed zero impediance.
Possibilies are a bad diode or ???

I am at an impass without a schemtic for a pro-94B including J203 jack
, modem chip and associated components.

Sure could use some help.

How many frequencies did you install? The reason I ask is that so many of the
published lists only show 20 freqs for Tulsa but there are actually 30 and if the control channel happens to be on one that is not entered you are up the creek. I have never even bothered to enter an ID, just the frequencies. If the freqs are entered correctly the scanner will hear any transmission in the system and all you have to do is hit "hold" when you want to follow a conversation or monitor a particular ID. I haven't programmed mine in several
years but recall that each freq has to be entered as "a trunked freq". RM~

WOW!! I am excited. You are much easier to understand than that doggone manual. I have over 30 frequencies including Broken Arrow. I think one of my problems is that I did not program them in chronological order. I think most of them are trunked but will go back and make sure that all of them are.
Thank You
Pam

I never have programmed BA into my scanners but am pretty sure that the BA freq's need to be in order but the Tulsa ones don't make any difference. The Tulsa and BA systems are two different systems and I doubt that you can use both at the same time. The BA system (erickson) as I understand is much harder to program the Tulsa (motorola) system. I suggest you try one at a time. Rob Mills

PS, You need 30 freqs for the Tulsa system, not sure about BA.

3639. Re: In search of PRO94B service manual

Yahoo group: pro94owners
Date: 2006-05-13 15:46:59 UTC
From: james1sback
Topic: 3634 Message: 3639

Thanks Robert. Marksscanners -- is far easier to use then the owners manual. However, I am seeking schematics of the Uniden logic board.

background:

Trying to resolve my "wired" display problem. The "wired" problem appears to be a component failure (cap, resistor, diode) on the Uniden logic board. The PC/IF jack isn't the source.

"Wired" means the scanner thinks it's plugged in with either another scanner or PC.

My first instinct was to press 2 + 9 while turning the scanner on. This didn't resolve the problem.

Next, tried to set the "bps" [bits per second] by pressing 4 (9600) or 3 or 2 or 1 (1200). While the scanner was able to set the "bps" speeds it didn't clear the problem.

Third, removed the PC/IF jack by unsoldering it from the mainboard. Nope, it didn't work either.

What I suspect is a collection of two diodes (D205, D206) and two resistors. One (D205) of the diodes resistance value is different than the other. To be sure I need the service manual with a schemtic.

Another idea I though of was to send one scanner into Radio Shack service center for repair. But...at $49 base labor seemed to be a little expensive to replace a single diode (hopefully).

I emailed Radio Shack to see if there's a service manual for the PRO94B. If not, then one scanner will be heading to the shack service center.

I am hopefull that some nice person has a service manual that would like to share. In return I will post my notes to fix the problem incase other PRO94B owners have the same problem.

Regards

3640. Question

Yahoo group: pro94owners
Date: 2006-05-12 22:31:27 UTC
From: reservist001
Topic: 3640 Message: 3640

Is there a way to lock on one particular city when trunking? I just bought a used pro 94 the other day. Also when is is displayin id scan is that normal? When it stops on some radio traffic it shows the frequency.

Thanks!

Not sure I understand the question but when it stops while in trunking mode (motorola) you should be able to just hit "hold" to lock onto and follow a conversation. RM~

Yahoo group: pro94owners
Date: 2006-05-14 03:18:52 UTC
From: Ken
Topic: 3645 Message: 3645

I bought the 94 about a year ago because my local area ems and police are soon joining the trunked 800 band, my problem is I cannot make heads or tails of how to program the talkgroup id's, anyone in the Indy metro area who could show me or explain it in laymans terms?
Thank You,
Ken
p.s. I'm in Morgan county Indian, specifically in Mooresville

http://mods.dk/mod/radio_shack/PRO-94_Trunking_Scanner_Tutorials.pdf
try this site it helped me aput a lot when i used the 94 i
beleive when it is on id scan it only stops on the freq in which you
have an id # assignd to it you can turn that on or off but i don't
remember how but it is explained in these tutorials if you want to
track a particular id all you have to do is hit the hold button {far
upper left button}

So am I. Sorry mate.

> if the control channel happens to be on one that is not entered you are up
> the creek.

I lurked about here and decided to scan/search all frequencies (without attempting to trunk) and save anything that sounded like an avant garde industrial band. I don't have OHP or BA Fire/Police down yet but I've got most of Tulsa's system covered now. The problem here is that UDN, UDSW and UDE all have their own car to car, tac and dispatch talk groups (not to mention maintenance and jail) so they tend to step on each other a lot if your trying to listen to the whole city. I'll likely break down and attempt to reprogram it so that each division will be in a separate bank.

Keep thinking I would do that with my bc895xlt but don't seem to find the
time to get started. More often than not I keep scanner locked on to the
main FD ID ( I have 2 sons on the TFD) while I run the shortwave
bands/freqs on other receivers. RM ~

PS, When I hear the chopper going nuts overhead I free up the scanner to
all.

3651. New to trunking

Yahoo group: pro94owners
Date: 2006-05-15 20:04:25 UTC
From: bl00d
Topic: 3651 Message: 3651

I just bought the Pro-94 and prior to purchasing it, knew nothing about trunking. I have read as much as I can understand about it and I think I have my radio programmed correctly, but am not getting anything from it. I have it on search mode, and all I get is an occasional loud buzzing noise. When it does this, it shows 20 752 as the talk group ID.

I live in Bloomington, IN, and from what I gather, the system is supposed to be online and in use here (and throughout most of Indiana), so I was expecting to hear something.

Any advice? Again, I'm a real novice, so it might be best if we assume I have everything set up incorrectly. Thanks in advance.

3652. Re: New to trunking

Yahoo group: pro94owners

From: james1sback
Topic: 3651 Message: 3652

I refer you to Radio Reference database for Monroe County Indiana for frequencies. http://radioreference.com/modules.php?name=RR&ctid=745

The trunking system you are monitoring appears to be EDACS.

I will also refer you to Radio Refence wiki article defining EDACS. http://wiki.radioreference.com/index.php/EDACS

What's important to help diagnose the problem is (for US members).
* State and county where you are listening from
* The frequency you are trying to listen to
* Please include if you think it's trunking and, if possible, what type of trunking you are trying to listen to.

These above steps make it easier to answer your questions.

Also, Radio Reference contains information about various subjects. Radio Reference has concentrated free resources available. I am a member. I believe the free information is a valuable resource.

Regards

Bad news: Win94 by Don Starr does not exist

Good news: Scanlite at http://www.scancat.com/ does work

Bad news: The demo allows downloads from the scanner only

Good news: Scanlite works on alot of different scanners and (IMHO)
is inexpensive.

I stand corrected. Being an avid user of ScanCat I actually assumed (i know) that there was a win94. Never said I was perfect, and I will be the first to admit it.And SCL is well worth whatever you pay for it.
Although a slight correction, Matt, You said it only downloads from the scanner and I think you meant downloads TO the scanner.

Actually Ed, downloading and uploading is relevant to whatever you're doing. What's important is how you express the action. Now I say the following statements assuming that both devices can read AND write.

If the data you're moving is on the scanner, then technically you are downloading it from the scanner, to the computer. If the data is on the computer, then you download it from the computer, to the scanner. Uploading is the same way, just the opposite direction. People just have to remember to use the words in the proper context. I've come across so many people that use the phrases incorrectly, and I just want to correct them, every time. Sort of like you did... LOL ;-)

But I understand in your context, you're speaking of SCL, which may only download TO the scanner. So am I to understand that the demo will not let you download FROM the scanner? I've never tried the program, even though I have it sitting around here somewhere.

I agree that d/l or u/l depends on what you are doing. I intentionally phrased my statement about d/l to the scanner. Actually I just opened my copy of SCL+ and set it for the94B. Then clicked on the load/read radio button. My 2 options were 'Load freqs in selected bank to radio' and 'Program Entire PRO-94B'. So you cannot read the radio, call it uploadng or downloading. You can write to only.
This is not the demo version, but the full, bought and paid for version, and was a bargain.

As I said before, it is my understanding that the circuitry in the 94B does not provide the ability to read from the radio. You can only write to it. It is not a Scancat Lite problem, it is the design of the radio.

Thanks for the clarification and helpful info Ed. I'm so used to Win96 on my Pro-96, and being able to go both ways with it. I've found that nearly every time I load a configuration into the scanner, I end up making some kind of manual change using the keypad. Then I send the configuration back to the computer. So it's good to know that you can only go one way with the 94B. That'll save me a headache when I decide to break out the ScanCat. (I've been using "Finger v1.0")

I was thinking that they quit selling service manuals to all scanners
at/about the same time (12/1990) they quit making/selling the Pro-2006 which
was the last scanner capable of receiving cell phone calls. I think the idea
was to keep people from dreaming up ways to modify their scanners. RM~

Thanks Ernie.

I have a copy of the PRO94 service manual. The logic board components had changed when the PRO94B model was produced by Uniden.

Yes, Uniden created the PRO94B logic board. In a desperate attempt to resolve my issue I sent Uniden Service Center an email asking for help.

If Uniden can't or won't help then I will send one scanner to Radio Shack Service Center to get it fixed. Hopefully, the service center will have a statement of what parts are either replaced or repaired. At $49 minimum labor ... this could get expensive.

My cut off is about $100 because the cost to fix exceeds what I would have paid for it at Radio Shack as new.

Regards

3676. Easy audio mod for 94!

Yahoo group: pro94owners
Date: 2006-05-18 06:20:45 UTC
From: progman22000
Topic: 3676 Message: 3676

Greetings everyone .. I have just added a late model 94B to my scanner stable and am very impressed with the sensitivity, selectivity, and speed of the unit.

Ok, it's missing some advanced features that many of us desire in a scanner, but right now it is on par with and even sometimes better than my Pro-96 when it comes to sensitivity and selectivity.

On to the audio mod - I had to tailor the freq response by actually covering up some of the speaker grill! It sounds counter-intuitive, but it's easy to see if you like the sound.

For me, covering the bottom half of the speaker with PDA-protector screen saver material did the job. Later I found that I now prefer to cover 75 percent of the grill. Now it isn't any louder, but the clarity has definitely been enhanced. Anything more than 75 percent just muffles it.

With the pda protector material you can easily adjust or remove it without gumming up the cover. Sounds crazy, but it works well for me...

3677. question about ids

Yahoo group: pro94owners
Date: 2006-05-22 22:05:04 UTC
From: badcompany00001
Topic: 3677 Message: 3677

I use to have a radio shack mobile that when it was scanning it would instantly show the id. Such as 6400 was a certain police department. I could hold it on that id and all I would here is that department. I am having a tough time understanding how the pro94 works. Is there an easy answer? Or do I just need to read the owner's manual until something clicks? I am just not sure if there is something I am overlooking.

I'm in the same boat as James and some others
1st i worked the jack a bit with a mini plug with a lil wd-40 no love
then i also removed the plug off circuit board no love
looking carefully there's 2 what look to be diodes d205/d206 i think
looking closely at d206 it looked/felt a lil bit crispy
so after trying dif surface mount diodes or what i thought were diodes
lol no love
so I removed the d206 and PC jack is still off and I put it back
together
bamo scanner works but no PC interface so i guess if all else fails
and you want to get it working via no PC interface it should fly
i'll be really interested in what you find out if u get info see if u
can get d205/d206 part#s and one for the jack as well good luck hope
this helps

Topic: 3677 Message: 3679

Hi I think you just hit the hold button but I think this will help you.

Monitoring a Single Talk Group ID Contents
To monitor a single ID in a bank, while trunking a bank, you can directly enter an ID (press .(MON/CLR) for an EDACS dash) then E (SVC) and the scanner will go to the ID in hold mode automatically.

Or, press HOLD(A/B) while any ID is displayed. HOLD appears in the display and the scanner stays on the selected ID. To listen to (and hold) a different ID, use the number keys to enter an ID and press HOLD to advance to the new ID.

To stop monitoring the ID, Press SRC(LIMIT) again.

Monitoring All Talk Group IDs Contents
You can use your scanner's display to monitor the talk group IDs of a trunked system for activity. While you cannot hear conversations in this mode, it is an excellent way to determine which talk group IDs are the most active.

To monitor all IDs, while trunking or trunkscanning, press and hold . (MON/CLR) until SEARCH and the channel number flash. All activate group IDs appear in quick succession. When you monitor IDs, any IDs you have locked out also appear.

To stop monitoring all IDs, press SRC(LIMIT) to return to trunking or SCAN to return to trunkscanning

Bill, you rock!

Diode D206 is the failure point.

Here's an image of the Pro-94B logic board. Note the D205 is left of
the PC/IF jack and D206 is on the right.

http://wiki.radioreference.com/index.php/Image:Pro94-logic.jpg

I choose the hard road and sent both of my Pro-94's
to Orem Utah for work last Friday. They should be back in two weeks.

Using a diode omh tester I discovered an open on the negative (ground)
side of the PC/IF circuit on Thursday night.

Bill you have the most economical solution to this horrid Uniden
problem. Zero dollar invest and some de-soldering time.

Else, you pay $49.95 each (minimum labor for each scanner) to Radio Shack.

Again, Bill you freak'in rock!

I will post the replaced part numers as soon as the scanners come back.

Also, I will complete a write up on this problem and post it at Radio
Reference. Not forgetting my Pro94 buddies here ... I will post the
link here.

Uniden should have fixed this problem at the design level not the
customer level. Radio Shack should have pushed for a manufacture
solution rather than filling their (radio shack) pockets from the
service centers.

Regards

You will get this response if the scanner is put into trunk ID scan mode with no talkgroups in memory. Press SRC when you get the message to go into search mode. Alternately you can go ahead and program one or more talkgroup IDs.

Alberto,

I ran into a similar problem yesterday using Win96... I'm not all that familiar with SC, but make sure that you set up the bank parameters first. Meaning if there's a field available for the bank setting, make sure that it's NOT set for CONV. It should be set to MOT. Then you can enter the talk groups in the correct place without the error popping up. Try that and upload again. Let us know if that fixed the problem.

Once it reaches the trunked ids side of the program it start saying a D-ERR NO 054 message in the display of the scanner it will load all of the frequencies including the the trunked frequencies that I have typed on the computer but once it reaches the ids the error comes on in scanner display and it will not program the ids into the scanner only the trunked frequencies are program but not the ids. I have purchase the cable that is recommened but it didn't work I still get the same message. I'm using the scancat lite plus software to program my scanner.
Thank-You

From: james1sback
Topic: 3693 Message: 3693

Both of my "wired" mode scanners have returned from radio shack.

I tried to upload the images and text document to pro94owners group but, didn't have the rights to do it.

So ... I created a Yahoo group and uploaded the images and document.

You can see it all at ... http://groups.yahoo.com/group/PRO94BWIRED/

Note to pro94owners moderators. I would be happy to upload the files (or someone else) to this group if given the previledges to do so.

Membership to PRO94BWIRED is open to anyone with a Yahoo account.

GO CHECK IT OUT!!!

And ... thanks to all who helped out. You work is much really--really appreaciated.

Regards

I have a Pro-94a.

Unfortunately Bill Cheek passed before being able to write a book on this RS gem of a scanner.

1. Any way to disable the low battery "beep" ?

2. Why does the low batt beep come on in trunk mode almost immediately after a full charge, but conventional scanning will go for hours before beeping?

thx

I got all that stuff to load ok after a few tries.
I noticed that the lower database did not load right unless I did a
separate copy operation of freqs first.
Then I selected all the ID's and did the copy begining with the first
empty record after the freqs.

Then it all loads into the Pro-94 without errors.
I'm still doing operational checks to make sure its all ok.

Hope this helps.

So you load the radio with the frequency data only, then load it again with the frequencies and TGs? I don't understand your statement "loading the ID's in the first empty record following the last frequency. On my software, the TG's go in another column. If you had three frequencies, do you start loading the ID's in the fourth row? I tried this and it still didn't play.

I may just have to load my TG's manually on the radio, if I can't figure this out.

Thanks

Joe

You own the scancat lite plus software. I had the same problem but the scancat tech helped me and made it work. Go to the select radio the in timming put it in .0001 or .001 it must be the timing. I just fix that and it loaded correcty with no errors. Tell me what happens.

Joe <n7jeh@...> wrote: So you load the radio with the frequency data only, then load it again with the frequencies and TGs? Thats right.
Scan Cat is a bit odd but that was the way I got it work.
The Group ID info goes in after the freq. records in the lower
database.
You wont see the ID's unless you expand the window in the right side.
==>>
So for me, I had to load the lower database in two operations,
One to highlight all the freqs, click on the first empty record
(making sure the lower one is completly cleared first)
and select the 'copy freqency' tab at the top.
Step two: clear all the highlighted frequency info in the top.
Then highlight all the Group Id info stuff in the top.
click on the next empty record after the freq records in the lower
database window.
Then select the 'copy group Id' tab at the top.
Now scroll up & down thru the lower database window and see if it all
looks good. (no trash, nonsense info)

Connect up the Pro-94 turn it on and see if it loads ok.
(I use the USB cable so it has little flashing green & orange lights
that start up if the data is flowing.)
After a couple minutes you should get an 'ok' signal and you can turn
off the pro-94, disconnect and be good to go.

If you still are getting error messages it may mean something is wrong
hardware wise.

If you move from town to town it's a nice thing to be able to do. ;)

See if that works ok for you.

Hope this helps.

I got the Pro-94B the USB cable and Scan Cat Lite +.
DL'd the trunking scanner freqs & Group ID's from Trunktracker.
After much squirrely work with the radio and software I got it
programmed so that it looks like its trunking ok...

However....

Theres only 20 trunking freqs here and 107 Talk Group ID's
After all that I'm still not seeing any evidence that the group ID's
even made it to the Pro-94B. I stood on my head reading the manuals
& the Trunking Scanner Tutorial.pdf, trying different things out but
no where can I display any of the Group ID info that was supposed to
have been written to the scanner.

Any insights on this or am I barking up a dead tree?

:)

Thanks in advance!

When in stops in a trunking channel and you see a group ID just press Prog and it will let you stored ids, or when it reaches a trunked id while scanning just press scan if it gives you an error no ids where program. If that occurs just move the timming fron the scancat to .0001.

That "New Graphic site" forward supposedly contains a virus and is making
the rounds of Yahoo groups. I noticed that the attachment got removed from
the one sent to this group but it is getting through to some of the groups.

probably due to the group settings about file attachments.

The virus, however, is propagated due to people not bothering to use and
update antivirus. And opening everything that comes to them, using HTML
mail, and not learning basic safe operating procedures.

Oh well.

You forgot one word - elementary!

If I had a dollar for every time I've heard something like: Don't open attachments if you don't know where they came from - I'd have a house on the lake and a new car.

You can count the morons by reading your mail - not necessarily an advantage.

The only thing that comes to my mind is "upper side band". Do they also use
hf
frequiencies there? It might help to know what numbers were mentioned. RM~

Upper SideBand.

It's typically used on shortwave bands. The Pro-94 won't receive USB or
LSB (lower). For this you'd need something like an AOR 8200. Expensive
but great rcvr.

I received my Associates in Electronics Engineering back in 1995 graduated first in my class, all my instincts tell me that there is a 70.5% +/- chance USB means Uiversal Serial Bus which is a computer term. According to the formula P=(A + B) where P is probability.

From: Ed Cifelli
Topic: 3722 Message: 3727

What were the numbers? Many times the info could be a license plate witht he letters USB, or orhte than the obvious Universal Serial Bus (computers) or Upper Side Band (ham radio), it could also have been some kind of bureau that the vehicle registration is run through. In the US we sometimes run a person through NCIC which is looking to see if the person has a crimonal record.

Date: 2006-06-26 16:34:46 UTC
From: jimmyshaheen
Topic: 3728 Message: 3728

Sometimes my pro-94 finds the control frequency & starts trunking at which point I can hold a MotorolaII ID or just let it scan and as it finds conversations it shows the ID of who is talking. Other times my radio will not start trunking no matter how many times I hit "src".The 2 blinks in front of the word "ch" followed by dashes & either starts trunking 3 to 5 minutes later or never starts & dead to all sound.Very frustrating as everytime I go to show someone my radio of course it won't trunk.Please help me figure out what I'm doing wrong everything else looks correct. Thanks group.

Topic: 3728 Message: 3729

I think...

if you havent entered the group IDs, then scan wont hear anything.
You have to hit search to see all the talkgroups. I found this out the
hard way with my own Pro 94.

If you dont get the control channel loud & clear, it wont trunk
properly.

Topic: 3730 Message: 3730

Hello this is interesting because the unit is loaded with ID's and I noticed sometimes it works normal other times it just stays dead.The thing I have been doing is putting it to where I see the talkgroup ID in the display then turn it off & back on again & sometimes this fools it into starting.At this point the LIST shows up activity blocks start blinking & it works flashing various Talkgroups .Problem is sometimes this works & other times it doesn't.If I just turn it on then hit SRC in the trunk mode, a channel number appears with only 1 activity block that doesn't move under the LIST and the unit stays dead then sometimes even 4 minutes later it kicks on & the blocks starting flashing and all is well.As an extra class radio operator i thought i knew my stuff but this this has got me thinking.Thanks groupsters. My pro 94 was a lean mean scanning machine.I forgot to disconnet my outside antenna one day.
There was a storm.I retuned home to find no reception.
I did a master clear using 2/9 turn on.
It scans the presets ok/squelch works...I can program it.
Just no pick up.
I opened it up and checked some of the componets in the immediate ant circuit.No problems found.
Any ideas????Thanks for any replies...Plz E-mail me.

Aloha well first get your local frequencies specific to your city then try to hear them.Trunking on this unit can prove to be very difficult.Once you get through programming it's simple and all you do is turn your radio on.Find somebody in your area that can help if possible.If once you get your info programmed you find most of your stuff is around 800Mhz than you can get that antenna from RShack.It will help the 800 band but may decrease sensitivity on other areas of the bands like aircraft around 110 Mhz.Good luck but mostly have fun.By the way I mostly listen to Hams 144-148Mhz & Police/Fire/Amblnce 856-861Mhz & it's hours of entertainment.May take weeks to fully learn the unit.Read your instructions find what kind of systems are local~JimmmY

I believe there is an A and B version of the Pro 94. I just bought the
A version that does not have a programming connection, knowing this
before hand I would not have bought it. I also purchased the software
and cord from Radio Shack. Does not connect to the Pro 94 A

3745. Newbie and Pro-97 ~ Yikes!

Yahoo group: pro94owners
Date: 2006-07-04 14:43:53 UTC
From: terryobrien1
Topic: 3745 Message: 3745

Hi There,

I just bought a radio shack pro-97. I feel completely in over my head trying to understand the manual. It really assumes some prior experience or knowledge - neither I have.

Radio Shack pre-programmed the unit for my county (king, WA). I only really want my specific area to listen to. Fire, police, hwy, city, etc... not the whole county.

So...A couple of questions:

Do I want to lock out what I don't want to hear?

I haven't been able to enter a talk group id number and have it switch to that.

Is there a website that has a better newbie guide to this scanner than the manual?... yikes!

Lastly... I wish somewhere I could find a legend of the display codes. The manual doesn't really walk one through what the various displays represent.

Does it make sense to get the scan-lite sw to handle the task of selecting what I want and don't want?

Thanks a bunch and if I'm in the wrong place to ask this please let me know.

-tob

Thanks Dave,

The site is helpful although my critter is a different beast as to the display and keypad. But I suppose the info will be easier to digest. Thanks for tossing this out here for me, I appreciate it!

Terry

There are 2 Yahoo groups for the 97. one is, strangely enuff, called Pro-97 and the other is PRO-97 users. You wuill find both groups very helpfull.

EdC

terryobrien1 <1terryobrien@...> wrote:
Hi There,

I just bought a radio shack pro-97. I feel completely in over my head trying to understand the manual. It really assumes some prior experience or knowledge - neither I have.

Radio Shack pre-programmed the unit for my county (king, WA). I only really want my specific area to listen to. Fire, police, hwy, city, etc... not the whole county.

So...A couple of questions:

Do I want to lock out what I don't want to hear?

I haven't been able to enter a talk group id number and have it switch to that.

Is there a website that has a better newbie guide to this scanner than the manual?... yikes!

Lastly... I wish somewhere I could find a legend of the display codes. The manual doesn't really walk one through what the various displays represent.

Does it make sense to get the scan-lite sw to handle the task of selecting what I want and don't want?

Thanks a bunch and if I'm in the wrong place to ask this please let me know.

3751. So Now That I Bought - How Best to Start

Yahoo group: pro94owners
Date: 2006-07-05 01:22:17 UTC
From: rkuzemch
Topic: 3751 Message: 3751

Hi All,

I ride Amtrak alot betweeen Richmond, VA and Washington, D.C and I got tired of never knowing what was going on when the train stopped or there was some sort of problem. I thought getting a scanner would help me to monitor activity while I was aboard. So this weekend, I bought a PRO-94 and have been trying to wade my way through the manual and setup process. I don't seem to be able to get any frequency reception except the National Weather Service. I've yet to travel on the train so I don't know if my investment will be worth it. As it stands now, I hear very little on almost all frequencies I try to monitor.

My question is where best to start to understand the "fun" I hope to have using my scanner. I've read several postings in this group but know there is probably additional areas I can go to understand how best to operate my scanner. I also noted with interest the debate on whether a different antenna should be purchased to expand range. Some say yes, others seem to be not sold on buying another one.

Sorry for the long message but I look forward to hearing from you experts on how I can start to enjoy what looks to be a fun hobby scanning the airwaves.

Thanks in advance for any replies!

well you can do one of two things;
1. you can manually enter them and get your frequencies off of www.radioreference.com a very good site or;
2. get scancatlite plus you can get this at www.scancat.com don't remember the price though

The Police Call Book is no longer available as the man that did it retired. As far as software, Scancat is highly suggested. What area do you live in? Also take a look as www.radioreference.com for the frequencies of your area.

3755. Pro 97 questions.

Yahoo group: pro94owners
Date: 2006-07-17 03:51:37 UTC
From: Loyd Samples
Topic: 3752 Message: 3755

I noticed the Pro 97 on sale for $149.99 today. That seemed a good enough price even though I'd be out another $50 for the PC interface and Scancat Lite Plus.

It made me think that RS is getting ready to DC that model and replace it with something else (better maybe?).

Does anybody know what is going on with that?

Is the combination volume/squelch a pain?

How are the buttons when holstered?

Also, I'm kind of curious as to what the folks around here think the "ultimate" handheld scanner may be? By "ultimate" I mean widest range of frequencies, greatest sensitivity, most rugged construction, best features, battery longevity and ease of use.

All in all, I'm very satisfied with my $25 97a and its battery mod. If the thing had PC link, alphanumeric and simultaneous scanning it would be damned near perfect.

I don't think that the sale necessarily meanss that the scanner will be discontinued soon. It was on sale about a month ago for the same price. I had a couple of coupons for 30% off which made the price real good. So good that I bought two of them.

Yahoo group: pro94owners
Date: 2006-07-20 01:00:49 UTC
From: Eric
Topic: 2210 Message: 3761

I just got programming the scanner and it is searching the ID's I put in there, but instead of just staying on --Scan ID-- all the time, it switches back and forth to searching the actual frequency. Ex: "--Scan ID--, 01-074, --scan Id---, then 856.4875, then back to --scan Id--."

This is getting annoying and I know it's taking up the search time. I also noticed when --Scan Id-- it doesn't hyperscan(or at least doesn't say) but when doing the 856.4875 it'll show "Hyper". Should --scan Id-- have hyper also and should I program the delay into it?
Help

OK so here we go....1st off .....who do you want to hear? The train
people? or listen to police? You really need to look at which systems
are being used in your nect of the woods.If the train it may be as
easy as acquiring the frequency for them programming& you are done.I
listen to a semi complicated group of ambulance fire & PD on a
trunking system with the same radio as you have.I have set it up so
that I can turn off the ambulances and fire-dept if I want & only hear
the cops.So the main idea is to know what it is that you want to do
before all.....research on the net here which systems are local to you
then the difficult part comes in.If there is a trunk sysytem you want
to know what sytem such as EDACS or Motorola II.Then with that you can
follw directions even online if you must.

Hyper is being bypassed anyways so don't worry about that.Hey monkey
with your SQUELCH and that should help with your problem a bit usually
lowering it a bit changes my search times.It does normally switch as
you describe.As far as locking on & displaying your talk-groups the
Squelch setting changes how quick it locks on and so does your
location or shall I say your conditions like a metal
room,antenna,poiwer lines etc. Chow ~~~~~Jimmy

I'd like to chime in here... I like the Scantenna ST-2. I've got several up there at about 35 feet, using the cable that comes with it. I pick up comms as far as 60 miles away. Great antenna. Not all that expensive either.

I do not have an outside antenna. Which model would you reccomend? And how high should it be mounted.

I might add that I bought my last 2 Scantenna's at Stark Electronics. Under 40 bucks, shipped to your door in 3 - 4 days. MAT Electronics seems to have a lower price on them, but I have no idea what they charge for shipping.

On my PRO94 I additionally bought the Radio Shack 800 mhz antenna, seems to have made a great improvement in reception and clarity. As for myself, no idea on software, I have just a straight 94, no pc programming option.

Topic: 3786 Message: 3787

>yes i am and i still get a error i don't what could be

The most common problem is pressing PROG rather than E to enter the frequency. For example, to program 145.00 MHz into channel 403:

Make sure trunking is not enabled if you have a trunked system programmed.

Press PROG to enter programming mode.

Enter 403 and press PROG to set 403 as the current channel.

Enter 145.000 and press E.

That's it!

My son lives on top of a hill that you can see for miles from and still can
not receive an 800 system that's aprox 40-45 miles away. I suggested he try
a multi-element TV antenna mounted vertically and pointed at the city but he
decided it was more trouble than it was worth. RM~

>165.2375

To program this into channel 151:

Turn scanner on.

If you see "TRUNK" on the screen press "TRUNK" to turn off trunking.

Press PROG.

Enter 151.

Press PROG.

Enter 165.2375.

Press E.

This channel is now programmed. Press PROG again to select the next
channel (152) or enter the next channel manually:

Press PROG to select channel 152 --or-- enter 152 and press PROG.

Enter 162.6875.

Press E.

Etc...

Do this for all of the desired frequencies EXCEPT:

>269.100
>282.425

These are not within the ranges you can program into a PRO-94.

>I have a pro 94 scanner. i cannot get hyper off my display

The hyperscan indicator is always on in conventional scan mode even though it is quite pointless. Hyperscan is only used in search mode (direct search, search from programmed frequency, search service bands, and limit search) and only for certain bands. The channel scan rate is fixed and can't be changed.

>and all of a
>sudden I get this annoying beep at the end of some transmissions. I
>tookit to radio shack but they were not helpful. can anyone help me

Is this on a trunked system or a conventional frequency?

If it is a trunked system you may not be getting the disconnect data. Also, if it is a Motorola system you may have accidentally turned off disconnect tone detection. Press "E" while the Motorola system is trunking to switch it on/off.

Some conventional radio systems transmit an audible squelch tone sequence to open and close the squelch on receivers. This usually sounds more like a 'sqwack' than a beep. Can you describe the beeps in more detail?

Without trying to sound like a wise guy, move closer.

800 Mhz signals are line of sight, and by design are short distance.
Frankly, I'm amazed (Not to mention thankful!) when my PRO-94 can pick up
systems from HALF that far away!
```

From: Larry
Topic: 3796 Message: 3796

I have a pro 95 Had it since new. This morning I turned it on and it scans but it will not receive anything. I did the reset and the initializing still messed up. Here is what it does turn it on it scans but no receive, open the squelch no sound, push manual then open squelch I get the squelch sound but no voice. Push WX same thing but it will lock on the first ch it comes to and when you keep pushing WX it will not go to the next ch. Push search go police/fire have 0 1 2 on 0 flashes and radio stays on 33.420 1 and 2 never flash. Radio has never been dropped and always taken good care of it.

I sprung around $30 for my copy of Scancat and have been treated with most excellent service by Jim Springer. Since the s/w is not freeware or shareware, you shouldn't be asking those kind of questions. The Scancat does have a trial period or you could use Don Starr's Win94 which is free.

Sadly, from what I can see, Win94 doesn't exist.

If you go to Don Starr's web page, (http://www.starrsoft.com/) you'll see
that "... we don't have (nor have we any plans to produce) software for the
PRO-94, PRO 2051, etc.." Disappointing, since that much means scancat lite
is the only program for the PRO -94B.

Anyone know of any others?

Scott

Finger V1.0 works well enough, but then again, no word of any chance of a revision or update from the original programmer... :-)

The Pro 94 does not cover the 225-380 mghz mil-com band. It does cover 138-144 and 148-150 where you will catch some mil-com. The newest scanner the Pro 97 covers milcom quite well...

Take Care..Ray

3813. PLease Help!!

Yahoo group: pro94owners
Date: 2006-09-07 16:02:34 UTC
From: eno3544
Topic: 3813 Message: 3813

Hello everyone!

i just purchased a new pro-94 scanner. I have having difficulty programming the talk group information intot he scanner. I live in Columbus, Ohio and want to just monitor/listen tot he fire department radio traffic.

I have the [4] primary control channels programmed + the remaining [24] channels.

When it comes to programming the talk group channels, I am lost! i have tried to follow the directions from the manual and on line, but I am doing somthing wrong. My scanner does not seem to follow the procedures listed in the manual or what I have seen/read on line.

I have the correct list/s with the fire departments talk group numbers.

Can anyone help!

I feel stupid, but need a walk through step by step to accomplish this task.

The scanner does scan the programmed frequencies ok, and i occaisionally hear the fire department traffic, but the police department traffic is busier and I miss a lot of the fire traffic.

I'm at my whits end with this. Heck, I do now how to porogram a vcr, you'd think this would be a piece of cake. LOL

I asked the sales people @ radio Shack if they could program the scanner as I wish, they said yes. Hooked up to their computer and downloaded this frequencies, however after reading the read out [they provided] I noticed they just programmed a bunch of random frequencies.

They also had no idea how to program the scanner [talk groups] as I wanted!!

Any help wil be mostly appriciated.

If you can help, please contact me at this e-mail:
egrant@...

Thank you in advance!

From: eno3544
Topic: 3816 Message: 3816

I recently purchased the Pro-94 scanner. I want to just monitor the/my local fire department radio traffic. I live in Columbus, Ohio.

I have found, verified and programmed the actual 800 frequencies, [which include the control channel frequencies] but am totally lost on how to program the talk group frequencies/codes for the fire department. I also have the talk group list for the fire department as well.

I have read the instruction manual over and over [not very informative] and just get lost/confused going from page to page.

Lost track how many times I reset the scanner and tried again. I don't know what I'm doing wrong or missing!

The talk group number/s range from 2 numbers up to 5? I have no idea how to program /convert/etc these into the scanner? BUT I do know how to program a VCR! Lol.

ANY assistance will surely be appreciated!

Please use this e-mail for a response back to me please.
egrant@...

Thank you in advance Gene

>as well.

Programming the talkgroup IDs is almost identical to programming conventional frequencies once the scanner is following the trunked system.

To make things easier, disable all conventional banks and trunked systems except the system you wish to enter the talkgroups for. Press SCAN to start scanning and press TRUNK if trunking is not currently enabled. Once the system is following the trunked system press PROG to enter talkgroup ID programming mode.

Each trunked system has five banks of ten channels for storing IDs. The currently selected bank (1- 5) will appear at the top of the display and the channel number (1- 10) will appear at the left. To move between channels you can:

Press PROG to move to the next sequential channel.

Press UP/DOWN to scroll between channels.

Enter the bank/channel number and press PROG (bank 1 channel 1 is 11, bank 3 channel 10 is 30, etc.)

Once you are at the desired location, enter the talkgroup ID and press E. Move to the next location and repeat.

When you have finished entering the IDs press SCAN to put the trunked system into ID scan mode. "ID SCAN" will scroll across the screen. Press 1 - 5 to turn the scan lists off and on just like conventional banks. You can also use manual mode to listen for one specific ID. Press MAN and then select the channel with the desired ID.

As you have seen, I posted for help in the programming of the Pro-94 scanner [talk groups]to listen/monitor the area fire department radio traffic.

I have attempted to use the information all of you have so graciously provided but still have been unseccusful in my task.

Is there anyone in my area {Columbus, OH} whi is familure with this process that can help me?

I am not sure what I'm doing OR NOT doing correct, or if there is an issue with the scanner itself.

I am so sorry to be a pain with this, but you all have been so very cool and polite and I THANK YOU!

Hello, everyone -

Just got a Pro-94 for my birthday and have been trying futilely to make sense of the derned thing - despite repeatedly reading the manual. Somehow I've locked out the entire scanner to the point it doesn't scan. My question? How do I remove the "L/O" on the screen? I think this has something to do with priority channels, but again, I'm dead in the water. Thanks for whatever pearls anyone can pass along.

Andy

Hello Andy,

The Pro 94 is a strange beast. If you turn it on and then press 0-1 before it starts to scan it will erase all entries and stop scanning. Now, if you start programing and enter the primary frequencies with mode set to FM it will scan. However, if you set the mode to MO it will not scan on group "0". I don't know why, it just won't. I have a message out to others trying to get some information, also. The owner's manual must have been written by an ex-Microsoft employee because it is unclear. If you get a solution to the problem, let me know, also.

Harold

Andy, apparently what you must have done is lock out all of the channels.(Which I didn't think was possible, but we ARE talking about RS.....)

Here is an excerpt from a PRO-94 manual I found online:

You can keep the scanner scanning by locking out channels that have a continuous transmission, such as a weather channel.

To lock out a channel, select the channel in manual or program mode then press S/S(L-OUT). L/O appears in the display.

If the scanner is scanning and stops on an active channel, quickly press S/S(L-OUT) before it continues scanning again. The scanner will lock out the channel and automatically resume scanning.

To remove the lock out from a channel, in manual or program mode, select the channel then press S/S(L-OUT). L/O disappears from the display.

To unlock all channels in the banks that are turned on, in manual mode, press and hold S/S(L-OUT) until the scanner beeps twice.

Note: You can still select locked-out channels in manual or program mode.

The last sentence is apparently what you are looking for. I have to do this once in a while to clear out channels I've locked out and then forgotten.

The "easier to read PRO-94 manual" can be found at:
http://myweb.cableone.net/marksscanners/94AB/94AB.html

This, by the way, is where I found the answer to my question of why trunking doesn't work in banks with both trunking and conventional frequencies. (As I suspected, the trunk has to come in the bank FIRST! All is well, now..)
You're right, the printed manual was somewhat ambiguous in the matter.

Hope this helps.
Scott

Harold,

Thanks for the insight. That's helpful to know. I'm going to sit down
with my Pro-94 tonight and muddle through the directions again. The
instructions on the user group sight appear far more clear than what came
with the scanner. At any rate, slow and steady wins the race - and helps
me avoid frustration. Again, thank you for your response.

Andy

First off I had no idea Pro-94 hand held scanners had an AM/FM switch. of ANY kind.

According to all my information the Pro94 hand held scanner is not an AM/FM radio ...

wish it were I'd love that feature ...

LO = Lock out , and to make it go away you press the LO button.

I don't know why anyone would have that much of a problem with reading the manual on programming frequencies ...

I admit to not knowing what the hell a trunk group is or how to program one , I just turn on the truck button and hope for the best

Each city or area is different , and the frequencies used in your city may not be what you think they are , you really have to get a list of local frequencies in your area and program them in one at a time.

Or you can sit and listen to the scanner scan through it's intire frequency range to hear if anything is going on , if you get activity on a channel you write it down so you can program it in at a latter time.

Example 155.000 to 155.999 Mhz is the police in my area.

Hope this helps.

Basic questions, Do you have any frequencies programmed into the unit? 2. Are any of the banks locked ouyt? ie the numbers on the top of yr display 0123456789 should be showing. If and are not showing, push the button for the ones not showing and see if that clears up the problem. If so, all that happened was that you had the operational banks locked out.
Let us know how everything turns out.

Andy,

AM and FM don't just apply to commercial broadcast radio stations. It is a function of how the signal is broadcast (amplitude modulated versus frequency modulated). Okay, basic radio 101 is over. First, after your radio is turned on, press 000 and then manual. This should cause the radio to display bank 0 and channel 00. Next, press the "PGM" button. This will put you into the program mode. Now, press the buttons for the frequency of the police (for instance 159.15)then press the enter button. The top right of the display should indicate FM and you should have that frequency displayed. Press "PGM" again and you should see that the channel has advanced to channel 01. Enter the desired frequency and again press the enter button. Continue this process of pressing the pgm, entering the

frequencies, enter, etc. until you have several frequencies in the scanner. Now, press the SCAN button. It should start scanning, but all you will see is a small black box blinking on the 0. If it is not, drop me an email at hlwatson@... and I will send you a text file of an easy to use and understand manual of the Uniden pro-94 or Radio Shack pro-95 and it will help. Don't get too discouraged, when you get it working you will enjoy the radio.

Harold

Andy,

One more thing; let me know if the people you wish to monitor are on a trunked system. You can find that information with the booklet that came with the radio or with the CD program disk enclosed with the scanner. If our local police/fire work on a trunking system then it will be necessary to program the bank for trunked frequencies. After selecting the group and channel (for instance 100) and pressing manual, enter the first frequency by pressing pgm, the frequency (for instance 868.7125) then press enter. If you get a message telling you the bank is not set up for trunking, follow the directions on the screen and you will see the FM on the upper right of the screen change to MO or MOT (indicating Motorola System). Then continue to program the frequencies.

Again, if you continue to have trouble, email me at hlwatson@... and I will send you the manual I downloaded off the Internet that is much easier to understand than the manual furnished by Uniden.

First off I had no idea Pro-94 hand held scanners had an AM/FM
switch. of ANY kind.

According to all my information the Pro94 hand held scanner is
not an AM/FM radio ...

wish it were I'd love that feature ...

LO = Lock out , and to make it go away you press the LO button.

I don't know why anyone would have that much of a problem with
reading the manual on programming frequencies ...

I admit to not knowing what the hell a trunk group is or how to
program one , I just turn on the truck button and hope for the best

Each city or area is different , and the frequencies used in your
city may not be what you think they are , you really have to get a
list of local frequencies in your area and program them in one at a
time.

Or you can sit and listen to the scanner scan through it's intire
frequency range to hear if anything is going on , if you get activity
on a channel you write it down so you can program it in at a latter
time.

Example 155.000 to 155.999 Mhz is the police in my area.

Hope this helps.

Do not tell that to all the PRO-94s I stuck a plug in and programmed.

Actually, the original PRO-94 was not programmable, but later PRO-94
versions were/are.

Some members of the Pro94 group complained that some people were talking about the pro95. Some data (including CDs that come with the radio frequencies) is for both scanners. The problems people have in programming a trunk tracking scanner is not unique to one particular brand or model and what does it hurt to be polite and considerate to those who might have difficulty using their scanner?

For those of you that said that your Pro94 is not programmable, how do you get the frequencies into the scanner to listen to? That is programming, friend. Agreed, newer Pro94 and some other scanners are not programmable by downloading the frequencies from a computer via a plug into the scanner, but manual programming is still programming.

Just to set the record straight.

I beg to differ. I just finished programming 5 of them at the RS I work at. The 94B is programmable as noted by the B and a little 'earphone' type jack on the right side that is labeled PC/IF.
If youy have a 94 or a 94A, you are right it must be programmed using Finger 101.

First off I had no idea Pro-94 hand held scanners had an AM/FM switch. of ANY kind.

According to all my information the Pro94 hand held scanner is not an AM/FM radio ...

wish it were I'd love that feature ...

LO = Lock out , and to make it go away you press the LO button.

I don't know why anyone would have that much of a problem with reading the manual on programming frequencies ...

I admit to not knowing what the hell a trunk group is or how to program one , I just turn on the truck button and hope for the best

Each city or area is different , and the frequencies used in your city may not be what you think they are , you really have to get a list of local frequencies in your area and program them in one at a time.

Or you can sit and listen to the scanner scan through it's intire frequency range to hear if anything is going on , if you get activity on a channel you write it down so you can program it in at a latter time.

Example 155.000 to 155.999 Mhz is the police in my area.

Hope this helps.

Hi Russ, All,

I don't know WHY someone in the group hasn't written a text file and uploaded it in the "Files" section. Having a file here about how to manually program in the various ways of getting the Pro-94 and it's predecessors, would be invaluable in helping others.

I'm more than willing to do that, provided the Group Moderator(s) allow me to upload it.

Russ, it sounds like you may have the 800 mhz Trunked radio type system you are trying to monitor. It would take up too much 'bandwidth' to explain it here. If you will e-mail me, at my ham radio call sign,: k5mke at aol dot com, I'll type up a file and e-mail it to you, via your return e-mail address.

Let me mention, while I'm sure Jim Springer, the ScanCat originator's program, is a great program, you don't need the software or R$ cable to do this. I have an ol' Pro-94 and unless something has changed in the 94-A or B models, you still can do this "manually."

I'm no software guru but I can "write" documentation, LOL! If you think trying to program a Pro-94 from the Owner's Manual, try making sense of the Pro-2051 manual, LOL! Yep, it's even worse, with no similarities in how the programming sequence is SUPPOSED to go.

Well, I have a 10 AM appointment. I'll be in touch later.

Respectfully,
73,

"Buck"/K5MKE

I don't think you'd want the back light on all the time, unless you had the radio plugged into a charger. Not to mention, it'd shorten the life of the bulb...

You CAN, however, automatically bring up the backlight when the radio is active, by turning off the radio, pressing and holding the "keylock" button and turning the radio back on. The display will read : " on AUT LIT". This will turn the backlight on for 5 seconds. From what I can see, it is NOT adjustable.

Scancat Lite is available ONLY at http://www.scancat.com/

I bought mine today. You can download it, or wait for a CD to arrive by
mail.

As to the cable, ask for RS part #20-047.

Hope this helps..

Scott

I just bought my pro-94 a few days ago to replace my old Bearcat scanner, my town (old bridge, NJ) switched to a trunk system years ago and I finally broke down and got myself a trunk tracking scanner. I was actually ready to return it because I could not program it and the instruction manual was not a bit of help, then I found this group and downloaded a bunch of tips from other posters - I am now happily scanning my town and surrounding towns. Great Group - thanks again.

From: just me :)
Topic: 3858 Message: 3858

Hello,

First off, I'd like to thank everyone from the beginning for their words of wisdom, as I've read the forum through from the beginning... before I posted. Many questions have been answered, but I can't recollect any info on the following:

I've got a 2 trunk sites with in a few miles of my area, one has 5 freq's (including CC) and the other has 10 (including CC), my question is, can I put these in one bank, ie A 1, and have the ID's in the lists associated with that bank, OR if I put them (the 2 sites) in different banks, do I have to re-enter the ID's in a list associated with the second bank, ie A 2 for the second site, as I only want to monitor 'x' number of talk groups. the system is a Motorola II in the 800mhz range

I've got the pro 94A....I wish I had a 'B', but we can't win them all.

thanks for all help

Ross B.

No, it won't. You need a PRO-96, PRO-2096, BCD396T, or equivalent
digital radio.

No, I'm not the Moderator. I'm not even the "Welcoming Committee", LOL!

I don't profess to be a "Pro" (no pun intended)about the 94 or any other "Nagasaki Hardware Store" scanner. (That's what the Ham's named it in 1962, when it only had ONE store and that was in Boston, Mass., LOL!)

There have been LOTS of changes over the years with Radio $hack. No, I'm not going to *get started*. ;-)

I started out "monitoring" on an old Patrolman, tuneable, VHF radio. I now have a "collection" of scanners: Pro 26, Pro 58, Pro 90, Pro 94, Pro 2045 and a Pro 2051. My next scanner purchase will be a desktop/mobile digital/alpha-tags...I'm just not sure which brand or model.

This is a terrific group.

Again, "Welcome aboard".

Respectfully,
73,

Hi Wm,

No the Pro-94 series will not do "digital". But, that doesn't mean it's not a great scanner for other services: Fire, County Sheriff, Emergency Services, FBI, CIA, DEA, ATF, & the U.S. Marshall's. Depending on which state you live in, it may pick-up the State Police in your area.

Some local government, road maintainence, forest service, et. al. frequencies are sometimes used by the Police at night for drug stake-out, gang monitoring, vice and even DWI check points. There's a lot more that goes on, especially after dark that never makes the news. Sometimes, you find out a neighbor isn't who you thought they were, LOL!

Now, for digital trunking (APCO-25), it really depends on which model you want to choose from the PRO-96 is digital as a "handi-talkie". It may not receive as well though as the PRO-2096, the desktop/mobile scanner. Just depends if you wamt to "look like a cop" or not, LOL!

I probably would choose the PRO-2096. But the only thing 'digital' where I live in Northwest Louisiana is some of the Bossier Parish Sheriff's "sensitive information" transmissions. Otherwise, it's either 800 mhz "trunked" or on the 450 mhz band. There are some area fire and police departments here on the 150 mhz VHF band.

I'm set-up to copy VHF stations within a 75 mile radius of Shreveport, LA.

You may want to join the PRO-96/PRO-2096 Yahoo Group as well.

Respectfully,
73,
"Buck"/K5-MKE

Well "Lick",

Unless you have the scanner plugged into the wall-wort charger, it would deplete your battery pack fairly fast. You'd think the scanner manufacturers would give us the option with a switch or button sequence.

Sorry, can't help you there.

As far as I know, only the one Uniden unit does APCO 25 right now, and it has a hefty $500 price tag.

I have the same problem..my office is located between 2 EDACS systems, and I know for a fact that one fire dept on the first system goes mutual aid to the fire dept. in the second system, so both groups work in either system.

So far, unless someone knows a shortcut, I'm guessing you do have to enter the group IDS into both systems...although I'm still in the experimentation stage..

Holding down the lamp/keylock button on the Pro-94 turns on the keyboard lock. If you press and hold the lamp button while turning the scanner on it will enable the autolight feature. This will turn on the lamp each time the squelch opens.

I decided to give RS a last chance, picked up the Pro-94 (went in looking for a Pro 99).

Is there a morons guide to this device? I spent 5 hours just getting my Scancat software to talk to it. (nowhere does it say anything about being locked to 9600 Baud for data transfers, my Pro 2054 does quite nicely with things set to 115200)

Tried to load in some local trunking freqs by hand. and I have no idea if I did it right or not. I get nothing. I checked out the help files here. still don't get it. this is my first time playing with a trunking Scanner, not a lot around here (just the listing in the supplied guide, and that is type unknown (State of Idaho, Latah County)

RS staff were of no use what so ever.

I'm about ready to call it quits.

can someone point me to a morons guide for Trunking and/or the Pro 94?

Lamenting In Latah

3872. Mod for 12.5 khz steps on all bands?

Yahoo group: pro94owners
Date: 2006-09-24 22:04:54 UTC
From: scottbomb
Topic: 3872 Message: 3872

An annoying feature of this scanner is that I cannot program frequencies based on 12.5 khz steps on certain bands. For example, Secret Service freq. 165.2125. When I enter this freq., the scanner storeit as 165.215 because this band of frequencies is limited to 5 khz steps by the scanner. According to the manual, there are a few of these bands that won't take 12.5 khz steps. Is anyone aware of a mod. to make the radio do what I want?

well for your local trunking system info. I use
www.radioreference.com

to program you have to hit prog, then trunk, then the bank number,
then the type of system, then you can enter the freqs.

ooook, according to RR. the only trunking listed for Idaho is the Idaho "Interoperable Mutual Aid Radio System (IIMARS) System" and that is all way down south of me. (200 plus miles)

System Type P25 (I understand that one, sorta). I don't think I will be able to get this one until the next time I'm down there.

in the "National Public Safety Trunked System" booklet that came with the radio, it does list freqs for my area (Latah County) but no reference on RR.

the booklet says type unknown. the freqs are 856.7625, 857.7625, 858.7625, 859.7625, 860.7625

I've filled up "Bank A" on my Pro-94, so I have all of Bank B to play with.

suggestions please??

Well let me know if you find one,and I will do the same! I guess one could be made, but I bet that would cost as much as the scanner does!

Or, www.trunktracker.com

Really extensive, but as in the case of my area, a bit outdated. Guess it's up to me to correct it, eh?

Scott

Three.

I need to start cuising the ham radio sites, maybe one of them has one that will fit.

I think I ran it down on RR. and if I have it figured right, it's LRT
and the Pro-94 doesn't read those (I think) TT shows the ones I have as
being listed to the State. RR had them listed to the U of I (same thing
I think).

but thanks for the tip on TT. always helps to have more data.

3894. Cases for PRO-94

Yahoo group: pro94owners
Date: 2006-09-28 13:29:26 UTC
From: Dennis
Topic: 3894 Message: 3894

Hard leather case:
http://www.scannermaster.com/ProductDetails.asp?ProductCode=02%2D580020

or softer ones:
http://www.rahq.com/acatalog/Online_Catalog_Belt_Worn_Radio_Holsters_and_Cases_217.html

and even shoulder holster types:
http://www.rahq.com/acatalog/Online_Catalog_Shoulder_and_Chest_Worn_Radio_Holsters_215.html

This one doesn't have a case for the -94, but folks at the PRO-97 list like them,
perhaps if contacted by several people they'll come up with one...

I just bought the pro-94 2 weeks ago, it has been working great for me
so far, i monitor my town and 6 other surrounding towns as well as
state police...the instructions for programming can be a little
frustrating at times but there ia a lot of help available from this
group. Well worth the $99.

Hello All. . .

I am a new member here, and am having trouble setting channels into my PRO-94. I am especially looking to get some "local" channels into my scanner, like a local fire or police, etc. Local, being Philadelphia, Pennsylvania suburbs.

I am really clueless when it comes to programming this scanner. Any assistance would be so helpful.

Thank you!

I actually answered my own question...to enter 500.000 trunked freqs, use either UHF or VHF, I spent several hours playing around until I got it. Surprisingly enough, the instruction manual was not very clear on the process of programming these freqs.

I found a leather case for the Pro-94.
It's at the website below.
http://www.scannermaster.com/ProductDetails.asp?ProductCode=02%2D580020
I do not have one yet, but I thought I would share
this information for the group.

Thanks,
Al

you got BATTERIES with your floor model? you lucky dog! I didn't, but I had a fully charged 8 pack of NiMH's in the car (Don't leave home without them!)

my question now is that there is almost no traffic in my area in the 800 range (most around the 155 and 460 ranges). but so is rebanding even going to affect me?

actually rebanding will just affect 800 mhz band, 900,460,150,33
will still be okay. and you will still be able to listen to EDACS
trunking systems on 800 mhz after rebanding but no Motorola :(the
only way to listen to motorola after rb will be to do it manually(no
trunk tracking) its not like the channels will just dissappear. also
you will be able to listen to LTR systems if you have a compatible
scanner.

I've got a pro-84 and a 97 I still use the 94 more
it's more straightforward in programming, although I
do like the 97 close call feature. Probably because I
haven't bought the software or cable for the 97 yet.
My 2 Cents

If you check real close atr the price of the 94, you will notice that the price ends in .97 This means that it is being disco'ed Also the website indicated that it is out of stock, so if are a 94 fan, good luck as the only ones are the ones in the stores. But more than likely the 97 will be a most excellent replacement.

Rich
You can buy buy either Win97 or Scancat to pgm the scanners. they cost about the same and the difference of opinions as to which is better is just like ford/chevy owners.
As far as not being able to find the receipt, it should have been in the computer at the store you bought it from and they can find it. This is one of the reasons we used to take names.

Are you SURE that the frequencies are non-trunked, go to radio
reference.com, click on Database, California, then your county, it
will list all trunked systems in that county, you can only scan EDACS
and Motorala with the 94, not LTR, iDEN, or Project 25. I know of a
big system down there that has Glendale, Burbank, And San Fernando on
it and will soon have Beverly hills, Montebello, Pommona, and Torrence
on it. It is called the Interagency Communications Interoperability
(ICIS) System, so you might want to try that one out, sorry, other
than that just make sure you have you squelch set right. By the way,
when programming trunking, only put in the transmitter/repeater
closest to you. And on EDACS systems, don't put any other regular
channels in the bank. Let me know if you need more help, Glad to
assist!! Good luck

I've managed to mix EDACS and conventional frequencies, but you have to put the EDACS freqs FIRST, and in proper order. Usually, in the order whatever frequency list you have put them. THEN the conventional freqs.

Well "Lick",

Unless you have the scanner plugged into the wall-wort charger, it
would deplete your battery pack fairly fast. You'd think the scanner
manufacturers would give us the option with a switch or button sequence.

Sorry, can't help you there.

Respectfully,
73,
"Buck"/K5-MKE

Haven't tried 2 systems in a bank. I imagine the radio would be confused by 2 control channels.

Scott

3932. New RS Scanners

Yahoo group: pro94owners
Date: 2006-10-03 17:25:52 UTC
From: Ed Cifelli
Topic: 3932 Message: 3932

I am addressing this to all of the scanner groups I belong to as I want some good opinions. I recently recieved an email regarding a comment I had made about the new RS scanners that are being released shortly. Pro 528 was one of them. I commented that they did not have the alphanumeric display. The email I received, and I have no doubt that the writer is correct, was that a lot of people that may buy a scanner were not because they were to complicated. Let me quote the answer I received. Has anyone run across this problem? Other than the fact that programming trunking is a large pain in the rectal orfice?

"The 528 and 433 are less-complicated scanners, designed to appeal
to users who do not want all the flashy, complex features of the
models currently on the market.

I know several people who have shied away from the current scanners
because of their complexity. These two will appeal to such
potential users".

Please, I am not trying to demean the responder, I am only trying
to make sense of of it.

EdC

Well ive had an experience with that, there is a large Motorola
system here and that has about 4 control channels, and my scanner
does not always work on that system, i sure would'nt try two systems
in one bank with EDACS, it would mess up the LCN's.

Do you know if you can do two seperate systems in one bank with
motorola?

HI! I'm a new user and find that the PRO-94 is a pretty good scanner for standard frequencies - I have not yet played with the "Trunking facilities" of the scanner.

As far as radio frequencies is concerned:
FM = Frequency Modulation (looks like an accordion)
AM = Amplitude Modulation (looks like a wave)

Can you listen to the LAFD by using the SERVICE BANK SEARCH Police/Fire/Emergency)???... that is the way I found the active frequencies for our police/fire/emergency frequencies here in NC.

Good luck...

>>>. Any suggestions for a suitable antenna?<<<

I find that the telescoping antenna with the coil in the center that Radio Shack sells for aprox $10 works as good as any that are portable. If you use it mostly in one location indoors go for a scantenna on the roof. RM~

Stock antenna makes the radio deaf as a stump on low band VHF freqs. It's optimized for 800Mhz.

You may want to try a Diamond RH-77CA. Good antenna for scanners
even though it is a 2m and 440Mhz, it can additionally receive these
bands: 120, 150, 300, 450, 800 and 900 MHz.
Have fun...

How far and what frequency? My son lives on top of a very tall hill and aprox 35 miles from a city with a Motorola 800 system (he can see the city glow on a clear night) but can not receive a signal from the FD that he works for. I suggested that he try a multi section TV antenna mounted vertically but so far has not tried it. RM~

The bottom of the case is still being held. The back of the battery compartment is part of the rear case and latches at the bottom of the front case. Pry it up gently and pull the bottom of the rear case outward - it will then seperate from the front on its own. To seperate the RF board from the logic board disconnect the speaker and pull the lower right corner (with the scanner facing away from you) outward.

From: Tim Manwell
Topic: 3958 Message: 3958

Hi all:

well, I just bought my pro-94 yesterday from RS on sale. Looks like a nice piece of equip. My last scanner was a handheld Uniden from early 90s, so been out of it for a LLLLLLllllllong time.

Now....
I didn't think I was clueless when it comes to using hi-tech gadgets, but this thing is causing me to have doubts. I started out by simply wanting to *manually* plug in some freqs. I tried to follow the directions on pg 24 of the manual, & even looked at the directions at
http://myweb.cableone.net/marksscanners/94A/94B.html in case these were better. But in both cases, I'm pushing buttons & *not* getting the response I'm expecting. In fact, not getting any response per se.

When I first turn the unit on it's in scan mode. Display says bank A, & the number 1 is blinking. There is no number 6 or 9 in the display, the other numbers are listed but they're
not blinking. I can go into manual mode by hitting the man key, but it's after that that nothing seems to happen.
For instance, if I follow this statement:
"In manual mode, press PROG to put the scanner in program mode. PROG and BANK A or B will appear in the display..."
those things *don't* appear in the display.

I knew there would be a learning curve involved with buying this, but I was HOPING that I could find well-written directions that would guide me step-by-step especially to something pretty basic like plugging in a frequency. Am I missing something????

Thanks.

Tim

Topic: 3958 Message: 3961

WOW - this is a long post...
When you first turn the machine ON and then press the SCAN button, the display should show BANK A and there should be a 1 blinking and then a 2 3 4 5 6 7 8 9 10 showing... if the 6 and 9 are missing, press the #6 and the #9 on the keypad to activate those channel storage banks... if the channel storage banks do not activate when you do this, perhaps the machine is defective and you should try to exchange it. PLEASE NOTE THAT, unless you have programmed some channels, the machine will not scan at all... when the SCAN button is pressed, it will only scan channels that are programmed, it skips all channels that have 000.0000s in them.

If you want to scan sets of assigned frequencies, PRESS the E key (SVC) and then press it again to select the group of frequencies you want to search (WX - HAM - MRN - AIR - POL)... this is a good way to find active frequencies - once you find some interesting frequencies in your area, write them down and proceed to program them into the channel storage banks... i have broken mine as follows:
Bank-A 1-50 Aviation
Bank-A 51-100 Police
Bank-A 101-150 Ham
This way, if you want to just listen to Police, just turn off the channel storage banks 1 and 3 and the machine will just scan #2 - Police.

I hope this helps, have fun...

Tim

Read the manual carefully as if you never have owned one.
I am on my second one and I own two 95's as well and I love it.
Cheaper then a bearcat!

The hardest part for me was the entry sequence for the Trunking.
Here at home we have EMS on VHF so this feature was invaluable to
me. I fought with this for about 5 hours on Saturday (bought last
week during a trip to LA) until remembered the sequence which was
not clear in trunking section. Works like a charm.

If you have one of the banks not lit then while in scan mode, not
trunking mode, press the correspondng number on the keypad and you
should see the missing banks return!

This applies to the banks available to you when trunking as well but
this time, you have to be "trunking"!

I am really interested in the software progamming side of this newer
model, my previous 94 did not have this feature.

Good luck!

usually trunked systems have multiple frequencies, not just one. Once you get all of the frequencies programmed in and it is actively trunking (you'll see the little squares at the top moving around) then you can program in your talkgroups. If you don't know your talkgroups, you can hit the search button (I think it is src if memory serves me correctly) and it will pick up any transmissions on those frequencies and display the talkgroup.

Go to www.trunktracker.com and find the trunk system in your city that has the one frequency you have. Then put all those frequencies in a bank in the scanner. (Make sure those frequencies are FIRST in the bank..DON'T make the same mistake I did...)Probably, your company's group ID will be listed in Trunk Tracker. If not, use the Group Search function to listen for familiar voices...and enter that group ID into the memory.

Confusing, I know, but we're here if you need us....

3970. Looking for any info on serial comm specs.

Yahoo group: pro94owners
Date: 2006-10-20 01:24:55 UTC
From: suprkr0n
Topic: 3970 Message: 3970

I just found this group and joined.
I am a new owner of a Pro94 and also a novice software programmer.
after discovering the limited choices in programming software for this
model (basically just scancat), i decided to take a stab at writting
my own software for this model. i would appreciate any help in
locating data sheets, serial comm protocol specs etc... for this model.
thanks for your time

I've had my Pro-94 for several years now. I bought if off eBay.

I just now found this group.

Bil Munsil (Yes, One L)

3985. Pro-94 Scanner For Sale

Yahoo group: pro94owners
Date: 2006-10-31 02:08:32 UTC
From: Gary Moyer
Topic: 3985 Message: 3985

For sale Pro-94 (NOT a PRO-94A or B). Scanner works great. Has a few scratches and the number 7 button has a chunk missing, but does not affect programming the scanner. I recently purchased a Pro-97 so the Pro-94 needs to go. The battery compartment is clean and has never had batteries leak in it. The display screen has a pda protector on it. All that is included is the scanner and the attached belt clip. The back light works. Photographs are available by email upon request. My personal email address is zonian149@...
<mailto:zonian149@...> . I would like to get $55.00 for the scanner plus $7.50 priority shipping. I will accept paypal, money order or personal check. I have attempted to add a link to the photos so if they don't work please email me. If you are outside the USA please let me know and I will find out what the shipping will be.

You can't. A little legislation known as the Electronic Communications Privacy act mandated that scanner manufacturers block out cellular frequencies. That and the fact that most cell phones are transmitting digital nowadays so you wouldn't be able to understand what was said.

Believe me, I used to work for a radio communications company, and was paid to monitor mobile phone calls (mostly to ensure the transmitter site was working right) ...there isn't anything being said out there worth listening to, anyways. 99.99% of the time I was bored to tears!

You won't be able to do anything to the Pro-94, A, B,or C(?) model to get 'cell calls. But then, why whould you want to listen to folks yacking their drivel about where they are, what they are doing or who they just saw? BORING!!!!

I bought a PRO-26 from a guy who had 'modified' his to get the cell calls. After listening to, "Marcia, I'm at the Mall and Old Navy has a sale on these cute blouses you like....". I never go there ever, to the cell band OR Old Navy, LOL!

Instead, I have it monitoring 52.525 mcs. FM for band openings and other 'more interesting'frequencies, LOL!

Respectfully,

From: Buck
Topic: 3993 Message: 3993

Good Morning, All,

Well, after many years of faithful service, I think my PRO-94 is "dying". She's been dropped (because of those flimsy belt clips breaking or working their way up from my belt) once too many times.

Now, when you turn it on, it just 'squeals' like a banshee. I've taken her completely apart and gone over the circuit boards with a magnifying glass and can see no breaks in either the boards or the traces. I've reassembled it, made sure all the screws were snug and still she 'screams'.

Ideas?

I may have to wind up buying a 'new-to-me', used Pro-94B model. This has been a wonderful scanner for all that I listen too on it.

I've replaced the POS, belt clip with a wide, Banker's money clip and should I repair it, that WON'T come off my belt, LOL! It's now epoxied on, LOL!

Any suggestions as to how to stop the squealing would be greatly appreciated. I hate to think I'll have to toss her.

Respectfully,
73,
"Buck"/K5-MKE

All,

I've certainly enjoyed mine, too. I belong to the "must buy the programming software" school of thought. Yes, it is pretty lousy if you don't have the software, but with it, it's pretty darn nice.

I've found that these days, you really have to get the programming software, otherwise you're programming 1000+ channels by hand.

I have the same issue with my VX6. I would be pretty ticked if everything was manual.

The old days of my 8 channel PRO-2009 are long gone!

Broken connections aren't always visible. You could have a fractured solder joint, a solder pad that has hairline cracked away from the trace, or a hairline crack in a trace somewhere. Wiggle stuff, see if anything moves that shouldn't. Look for cracks by holding the board up against a bright light (not that effective with multilayer boards, but it can still work). Poke and prod at things (with non-conductive tool) with the scanner on. Use a (good quality grounded-tip) soldering iron to resolder everything.

Good luck.

-Jim

Jim,

I really don't mind hand-programming stuff in, once I know HOW to do it. It took me awhile to figure out the programming scheme on the 94 (plain vanilla) as the instrutions were 'clear as mud'. But, this is just the way Rat $hack does things. No wonder they're closing stores. They dropped the "parts" and Ham business and all they are now is just a cell 'phone reseller. Where is my "Allied Radio" and Lafayette Electronics, hehehe.

My next scanner purchase will probably be one that does 'digital' with "Alpha tags" that goes 'base' or 'mobile' and I don't need over 500 channels, with all the other scanners covering the rest.

Now, not only do I have the Pro-26, Pro-58, Pro-90, Pro-94, Pro 2045 and Pro-2051, but I have a HTX 100, HTX-10 & TRC-502, LOL! But then too, I have an Icom 706MkII-G, Heathkit 2036, 2 m FM and a Heathkit SB-220 2Kw linear amp, and I still can use more 'gear'.

One can NEVER have enough radios. ;-) I just might try an locate some old "boatanchor" transmitters and receivers.

Respectfully,
73,

"Buck"/K5-MKE

Geesh, Buck...every radio I've ever owned (Except for scanners, for some reason) WAS a boat anchor!

Take the Yeasu FT-5100 that I just installed the other day that only transmits on UHF, for example...but I'm WAAYY off topic for this group, hi hi.

Like I posted here a while back, back in the mid 1980's, when I was actually PAID to listen to calls (I had done a recent tower site overhaul) I spent a week listening to one transmitter.

In a whole week of listening, only one conversation worth listening to, but the contents are WAY to juicy for this group.....otherwise, it was heavy doses of coffee and No-Doz...I'd rather put red hot pokers in my eyes....

4012. Alkaline battery leakage

Yahoo group: pro94owners
Date: 2006-12-01 05:10:54 UTC
From: R.E. Jordan
Topic: 4012 Message: 4012

I recently noticed, after opening my battery back, that the AA alkalines had some minor leakage. Of course, I immediately removed them and did a relatively thorough cleaning of the case, contact, and any other spot I found battery acid.

I usually keep the 94A on a DC adapter inside the home, and rarely (nowdays) take it mobile. I double-checked to make sure the internal switch had not been knocked over to "nicad", which it had not been moved.

It's possible this was a rare case of a bad AA alkaline, but I was wondering if anyone had this occur to them. The DC adapter was standard RS issue and set for the 94A.

This gave me a brief memory flashback to a few years ago when I had accidentally left some alkaline in an Icom W32a h/t and had them "charging" for a few days before noticing my mistake. I almost destroyed the h/t. However, after breaking everything down to board levels and cleaning with a slight alcohol solution, I was able to clear all acid remnants and the radio recovered nicely and is still working. Even though it initially acted like toast..... Fortunately, this was not the case with the 94A, and wasn't quite the same cause.

I had a similar thing happen with a Uniden Marine VHF HT of mine. I was
using it, and all of a sudden, the XMIT went away...

I had one lousy battery in backwards.

NO amount of cleaning and resoldering got that radio back on the air...so
far.

4014. Re: Capacitor

Yahoo group: pro94owners
Date: 2006-12-18 05:16:58 UTC
From: Don
Topic: 3868 Message: 4014

Bill, you need a resistor between Pin 9 in the tip on your jack. Then connect the ring on the jack to ground. The capacitor is a low pass filter for the IF component at 455 kHz. You would put that between the resistor (tip) and ground. Here is a link to a photo of a older scanner but uses the same IC.

http://www.discriminator.nl/pro-37/index-en.html

This site is quite nice as it lists mods to hundreds of scanners.

4015. Need help with Pro-95 --- PLEASE !!!!

Yahoo group: pro94owners
Date: 2006-12-26 22:14:34 UTC
From: md7018j
Topic: 4015 Message: 4015

Hi. I just recieved a new pro-95 scanner. I am the previous owner of a pro-94 and was very efficient in programming it. I am having trouble programing talkgroups. The regular frequencys are a piece of cake for me to program and I need some help programing the talkgroups for my county. The police department uses a Motorola Type II Smartnet system which I thought was the eaisest type to program. I followed the directions on the "Eaiser to read Pro-93/95/2053 Manual" and have done these steps....

1.I programed a few basic aviation frequencys on my first bank
2.I hit PGM-Trunk
3.Typed 1936 (As listed as the DEC for my local police precinct on http://radioreference.com/modules.php?name=RR&sid=189)
4.Hit enter
5.Now it says

Bank 0-1 ON
ID No. 00
MOT: 01936
ID# 01936 |

But I get nothing at all. Am I doing something wrong? Did I mess a step?

Any help would be GREATLY appreciated.

Thank you very much
Jason

It's impossible to tell from the information you've provided. The display information only tells us you have set channel bank 0 to Motorola trunking type and entered a talkgroup ID into ID bank 1 channel 0.

However, since you said you entered aviation frequencies into bank 0...

I'm going to guess you have not yet actually set up the trunking system. The GRE scanners allow you to enter talkgroup IDs as long as the channel bank is set to some trunking type, the system does not have to be entered correctly (or at all.) Assuming you don't have anything in channel bank 1, let's start by putting the trunked system in there.

Press PROG to enter programming mode. Press FUNC and then UP to scroll through the banks until channel 100 appears in the upper left corner (the display will say P100) or just enter 100 and press PROG to go directly there. Press TRUNK to enter the trunking configuration for the bank. Press MODE until the third line of the display shows "MOT:" on the left side. The bank is now in Motorola trunking mode. Press PROG to return to the channel bank programming mode.

Enter the first frequency of the trunked system and press ENTER. The frequency will now be displayed on the second line and "MO" will appear in the upper right of the display. If it doesn't you are not entering the frequencies in trunk programming mode, repeat the above steps. Press PROG or UP to select the next channel. Enter the next frequency and press ENTER. Repeat until all frequencies of the system have been entered.

Press SCAN to enter scan mode. If you do not see bank 1 in the scan list press 1 to activate it, then deactivate any other banks which may be there already. There should also be a "+" below bank 1 on the scan list, if not see below. If

everything is correct the scanner will be following the trunked system. As soon as any talkgroup is transmitted the scanner will unmute and you will see the talkgroup ID on the bottom of the display.

If "-" appears below the 1 while scanning the trunked system is in 'closed' mode. Press MAN to enter manual mode, then enter 100 and press MAN again to go to the trunked bank. Press FUNC and then 5. The bottom line of the display will say "Bank OPEN" for a moment. Press SCAN to return to scanning mode and the "-" should now be a "+".

Once you've done the above and the system is trunking correct write back to the list and we'll walk you through entering talkgroup IDs into the ID banks to make scanning the system a little easier.

To further answer, if your police dept had a talkgroup number like that, you would have had to program in the frequencies being used because this indicates a trunked system. Freqs go in first then the talkgroups.

Hi, I just purchased the Pro 94 scanner. I am a freelance photographer for a local paper and need to know if anyone is in the Tacoma Washington area and knows where I can get a list of good frequencies for the police, fire, news, ect.

Any assistance is greatly appreciated.

Thanks in advance

4032. scanner Help

Yahoo group: pro94owners
Date: 2007-01-12 02:04:00 UTC
From: Dale
Topic: 4032 Message: 4032

Ok someone point me in the right direction i have the radio shack pro94A scanner But i have scancat-lite wich doesNOT support my scanner or so it seems so now I'm like totally confused...HELP!!it supports the pro94B model but yet i have the pc/if jack on my scanner and scancat tells me "Re: [Scancat] ScanCat-Lite

On the3 side of the scanner will be what looks like an earphone jack. It is
labeled PC/IF, this is where the cord from the computer would plug into. If you
don't have one of these then you probably have the A model. You can also tell be
checking the nameplate under the belt clip."

so i Looked under the belt clip and it has this 07AO5 so does this mean that i have a radio shack scanner pro94A? and it DOES have the pc/if jack on the side of the scanner

4033. Re: [pro94owners] scanner Help

Yahoo group: pro94owners
Date: 2007-01-12 07:26:43 UTC
From: Mike
Topic: 4032 Message: 4033

07A05 is the manufacture date code. The revision designation is at the end of the catalog number on the top line of the label (20-524<A/B/blank>). It's kind of a moot point anyway, the fact that the PC/IF interface is present means it is the B revision.

PAGE 50 of the manual.

50
Locking Out Talk Group IDs
Many municipal and commercial services use trunk
systems to transmit signals from such devices as water
meter transmitters, door alarms, and traffic signals.
Some signals are encrypted, as well, and most are not
voice signals. Since all these are assigned IDs just like
other users, you may want to lock out reception of
these ID signals. You can lock out up to 100 IDs at one
time.
Note: If you lock out an ID while searching, it is also
locked out of the scan list(s). See ☐Using Talk Group ID
Lists☐ on Page 52.
To lock out an ID, press L-OUT (S/S) when the ID appears.
The ID is locked out, and the next active ID appears.
Unlocking a Single Talk Group ID
1. Hold down L-OUT (S/S) until you hear two short
beeps.
2. Repeatedly press W or V to select the ID you want
to unlock.
3. Press L-OUT (S/S). The ID is unlocked, and the
next locked ID appears.
4. Press SRC (LIMIT) to resume the scanner☐s previously
selected function.
Unlocking All Talk Group IDs
Hold down L-OUT (S/S) while searching until you hear
two short beeps, then press E (SVC) to unlock all the
IDs at once. The scanner beeps twice. Press L-OUT/SS
to resume the search.
Note: When you unlock all the IDs, the scan list appears.
Press SCAN to scan the IDs stored in your scan
lists or press SRC (LIMIT) to resume the scanner☐s previously
selected function. For more information about
scan lists, see ☐Using Talk Group ID Lists☐ on Page 52.

From: Segaboy
Topic: 4039 Message: 4039

Hello everyone, I am yet another newbie to the group. I've been shortwave dxing for years but just started in the scanner hobby as passed down from my father who always knows whats going on around town and where the tornado is haha But anyway to the point. I purchased a pro-97 via Ebay but the seller turned out to be a complete pain in the rear and never sent it or responded to my emails. After 4 more emails via the PayPal resolution center I filed a claim & I am waiting to see what my options are. So in the meantime I saw that the local Radio Shack had a Pro-94 for $99 and so I bought it as I think I will never see that Pro-97 show up. One of the biggest featues I liked about the 97 was it's signal stalker for easy searching local. I haven't explored the 94 yet but was wondering does it have such a feature or similar scanning ability? I can even deal with manual range setting if it will search for signals between two set ranges or am I going to have to know the exact freqs?

From: Luis Flecha
Topic: 2733 Message: 4046

If the website don't tell if the trunked system is motorola or edacs you could simply program the bank as an edacs type and try it out and verify if you are following the whole conversation. If not then program it as a motorola. The Utility company here they are edacs, but they like to use the private call function a lot. This make it difficult to identify if it is an edacs because the Pro-94 can't follow private calls on edacs.

There is also a section on page 43 of the manual that give a guide for setting the type of trunked system based on the frequency range.

Motorola Type I and Type II system:
935.0125□939.9875 MHz
851.0000□899.9875 MHz
(except cellular frequencies)
406.0000□512.0000 MHz
137.0000□174.0000 MHz

Ericsson EDACS system:
900.0000□956.0000 MHz
806.0000□868.9875 MHz
406.0000□512.0000 MHz
137.0000□174.0000 MHz

Good Luck

If you go to Radio Reference, you can't get it any easier that this is.
When you click on a county it will tell you what it is, It looks like this:

System Name: Miami County Location: Miami County, OH County: Miami
System Type: EDACS Standard System Voice: Analog Last Updated: _Changed
talkgroups_ (http://www.radioreference.com/modules.php?name=RR&sid=579&tab=history)
Hits: 4782

This is the best site for finding the information you need. Much of the
software that is out there goes directly to this site for info.

Radio Shack have an exterior antenna called the Discone and is very good for any scanner hooked with a BNC adapter. Almost any exterior antenna copled with a BNC adapter would improve yuor reception a lot. If you are monitoring 800 MHZ trunked get a used old roof mounted celullar antenna and you should see the results.

Also try other rubber duckies antennas as well. I use my Pro-94 with the Pr0-34 antenna and there's a lot better reception.

4053. Omitted trunked frequencies

Yahoo group: pro94owners
Date: 2007-01-24 17:13:22 UTC
From: n3ufw@eklhq.com
Topic: 4053 Message: 4053

How will I know if a voice channel frequency used by a site in a trunked radio system is not programmed in my Pro-94?

My understanding is that the scanner requires the voice channel frequency to be programmed for any communications to be heard on that frequency. If I don't have that frequency programmed, I may miss parts of the communication.

What I don't understand is why it is necessary to program the frequency. The scanner must already know the mapping for channel-number-to-frequency to switch to the correct frequency for the transmission. The mapping is well-known:
http://www.batlabs.com/800chan.html

If I am monitoring a trunked system, I obviously want to listen to the transmissions. When I Hold on a talkgroup, I want to the listen to anything transmitted on that talkgroup, regardless of the frequency used.

Why is the unnecessary, error-prone step of programming the voice channel frequencies required to listen to a trunked system?

4054. Re: [pro94owners] Omitted trunked frequencies

Yahoo group: pro94owners
Date: 2007-01-26 22:16:42 UTC
From: rrhoa60081@aol.com
Topic: 4053 Message: 4054

A trunked system uses whatever frequency is available. Assume that we are on a non trunked system. The fire dept has 4 freqs as do the police, EMS and the street dept. That's 16 Frequencies. There would probably never be a time when all 16 freqs would be in use at the same time. A trunked system takes, let's say, 8 frequencies and allows the computer to use them effectively by choosing one not being used. In order to keep the conversations together, a talkgroup is used. The system sees the all people on the talkgroup and assigns a freq to that talkgroup. The MARCS system uses T1 lines from each tower site to a central computer in Columbus so that you could be in Cincinnati, and I could be in Cleveland, but if we are on the same talkgrouop,we haer each other. In Columbus, the fire dept. has 7 battalion chiefs. Each of the battalions has talkgroups assigned to them. All fire runs in the 1st battalion are on Battalion 1 Fire ground. The dispatcher says that when dispatching and all apparatus turns to that talkgroup. The 94 makes it a little harder to understand because it doesn't have alpha tags. A radio like the 97 does and you actually see who is talking instead of just a number.

i have a question about trunked systems and programming,, so right now our local police/fire/ems are all on standard frequencies. sometime next month they plan to go to a trunked system. without knowing what set of frequencies they are going to use, what do i have to do with my pro94 to search for these frequencies, program them in, and keep track of all them? i've never messed with trunked systems before. i don't want to get left in the dust when they switch over, more like i want to be fully prepared when they go to the new system. let me know, and i will update the group as all this goes down. thanks.

If they are just now building a new trunked system, it is likely to be a digital system that your Pro 94 can not receive. Do you know anything about the system?

Where is it?

if the pro 94 will not recieve it in digital format, what scanner will? the system is in southeast alaska, and from what i've heard they will be on the same system as valdez alaska, able to talk to them on the system if they need to. not sure at this point if anchorage is involved, but did hear valdez is for sure. thanks again.

go to radioreferenc.com, choose your state, then your county. Look for trunked systems. Everything you will ever need to know about the system is there.

It appears that much of Alaska is going to be using a P25 (digital) VHF system.

You might find this document interesting:

http://www.apco911.org/frequency/siec/documents/documents/alaska.pdf

Also, be sure to see the Alaska information in the database at

RadioReference.com

printed off the link you supplied, lots of frequencies in there to mess with when this plan goes into effect. i still am in the dark as to what kind of scanner i will need to pick up these digital signals. as the other poster said earlier i will not be able to listen with my pro 94.. i can always sell it and go with one that will pick up these signals, but what scanners will? let me know.. going to check out radioreference.com next and see what info they will provide. as i said earlier i am totally new to this trunked digital stuff, but i really want to learn.. thanks again.

(Un-hijacking this thread...)

If I mis-typed a frequency or I omitted one of the frequencies for a trunked system, is there any way for me to know? I won't be able to hear anything transmitted by the radio system with this scanner if the voice channel frequency isn't entered, even though the control channel indicates a talkgroup is in use that I'm interested in hearing.

Is there any way for me to know that a voice channel frequency is not programmed in my scanner that is used by a trunked system that I have programmed?

From: Mike
Topic: 4064 Message: 4065

You need to put the bank into closed mode. Press MAN to enter manual mode. Press up/down, FUNC-up/down, or use the number pad and MAN to move the current channel to one of the channels in the trunked bank. Press FUNC and then 5 to toggle open/closed mode. The "+" in the upper right portion of the display will become a "-" when the trunked system is in closed mode. The "-" will also appear below the bank in the scan list while in scan mode.

4066. Connecting an indoor TV antenna...

Yahoo group: pro94owners
Date: 2007-01-30 10:32:07 UTC
From: Christopher
Topic: 4066 Message: 4066

Hello all! Since I'm someone that likes to take things apart and try new ways of doing things I am going to buy an jack adaptor to hook up my indoor TV antenna (that sits on the television) and plug it into my wonderful pro94B. My question is, will that fry my scanner? From what I've seen in other forums, it shouldn't fry it, but I wanted to check with you guys to see if anyone has done the same and what the results were....

The antenna is a dual VHF/UHF and uses 3,5W and 50hz. Thanks.

you are going to take an amplified TV antenna and plug it ino the scanner. It should work asa long as you dong plug the amp power supply into the antenna jack.

the clerk at the local electronic supply store looked at me like I was Ralph Nader running again. But when I explained exactly what I needed (a atenna adaptor) and showed him the connections I wanted to put together, he went to town and put a couple of adaptors together and KAZAM I can hook my indoor TV antenna up to this wonderful scanner! All for under 2Euros. The reception is great and the whole family is enjoying the scanner now. Give it a try if you can't afford an outdoor atenna.

Hi. If anyone is looking, I have a Pro-97 for sale on Ebay. I purchased this last October. It has a manufacture date of 5/06. It comes in the original box (not the blister pack they use to come in) (2) antennas, one of them is the stock, the othetr is an 800MHz. The USB cable, and driver install CD. It also has 10 months left on the extended warranty that I purchased. It is in mint condtion. The item # is 290079039599. I have a perfect ebay score, so bid with confidence. I am selling this because the hobby does not appeal to me. I know your saying what?? Doesn't appeal to him? LOL

If all channaels are locked, there is a possibility that there is nothing loaded. Make sure all banks are selected, then slowley turn off the banks one at a time. when the msg 'All channels locked' comes back, go to manual and see what is in there. If the frequencies are there, make sure they are unlocked.

4078. Is it possible to unscramble Police band or do I need a different Scanner?

Yahoo group: pro94owners
Date: 2007-02-06 17:56:22 UTC
From: Stan Stone
Topic: 4078 Message: 4078

I have the Pro 94 bought in 2002...I can hear the Police talking in 155 frequency but sometimes they go into code that makes them sound like it is garbled jiberish...there is no beeps... I tried the Ramsey kit which is supposed to be a speech scrambler/descrambler but it didnt help.I have a 3.58 crystal in it and just ordered a 10.24 crystal but don't know if that will work either since I dont have it yet...

Is there a way I can unscramble this?

Is there anyway to find out what system my local Police use?

Could I be using the wrong kind of scanner?

What is the best base scanner antenna to use?

Thanks for your advice

Go to radioreference.com, choose your state and county. Every frequency used in your county will be there. In general, if they scramble the message, they don't want anyone to hear it.

Stan

If we knew what city you were listening to then we could help you better. Some departments have gone to digital ($$$$$) and some are also encrypted. The 94 will not handle either of these, and no scanner will handle the encrypted.

Actually, the UK/EU versions of many AOR and Alinco scanners will handle
inversion scrambling as well as cell frequencies.

If you're ever in London, there is a big shop on Tottenham Court Rd. that
usually carries them.

But we aren't allowed to buy those here in the land of the free.

From: Stan Stone
Topic: 4082 Message: 4082

My local Police use 128 bit rolling encryption on the frequency range of 155... I am almost sure theres no way to unscramble it... I hear them 90 percent of the time... the other 10 percent of the time they go into "code"... I was wondering if there is any way to unscramble that "code"... since they use the 128 bit rolling encryption I am just going to give up... I dont think there is anyway to unscramble it... I tried the notorius Ramsey speech scrambler/unscrambler with a 3.58 crystal and that did not work... Then I tried a 10.24 crystal in it and that didn't work either... I guess they just don't want anyone to hear them and thats the way it has to be...so i guess I am giving up unless someone has an idea... I don't care that terrible much but it just started turning into a "head game" with me not wanting to admit the fact they outsmarted me... many of you know what I am talking about... so for now... I am out of ideas.... unless you guys and gals have some thoughts... Thanks

How do I enter tac numbers (example tac #6 has a number of 3376)I've got the frequencies that come with the manual book entered ok but cant follow when they switch to the tac numbers. Any help would be greatly appreciated. Thanks- Cladder 537

4084. Programming trunked frequencies

Yahoo group: pro94owners
Date: 2007-02-13 02:01:29 UTC
From: esckenross
Topic: 4084 Message: 4084

Just bought a 94 yesterday. Went to my local Shack to have it programmed. The manual says it can be proged with a computer program. This was tried at the store. When I hit the trunk button, nothing is found. When I hit it again, to turn off trunking, I'm able to pick up transmissions but nothing for my local PD. A RS website answered a question about programming by saying that the 94 can not be proged by computer!!!!!!! Any help?!?

Take the 94 back and buy a 97. It is a much better radio. In general, the people at Radio Shack might know local frequencies but when it comes to trunking, don't have a clue. Buy the 97, get the cable because you'll want to make changes later then download the software from Don Starrs website, give him 25 bucks and you'll be happy for the rest of your life. His software allows you to download every frequency and talkgroup in your county or wherever and put it where you want it. Additionally the 97 will scan trunked and conventional frequencies at the same time, i don't think the 94 will.

Topic: 4083 Message: 4087

Get it in the trunk bank that you want then push pgm and enter the talkgroup you want then hit enter. With the 94 you can't type in the name of the talkgroup, Tac 3, only the numbers. As I said befoe, the 97 allows you to not only put in the talkgroups but also the alpha tags such as TAC 3, etc so you don't have to remember that 13870 is TAC 3. The 97 also allows scanning of trunked and conventional systems. It was on sale for $149 and is a far superior radio. I have bothe.

The 94A and 94B will. The 94 is a good scanner for casual listening and beginners. Does not cover mil air, the 97 does. The 94B has PC programming capability, but this seems to be an excercise in futility for a lot of people. The 97 with Don's software is VERY good. I've got both, and like them both. The 97 is a better choice for hard-core scanner users.

Thanks for the input; however, I was able to program the frenquencies in myself. I found that the "search" button has to be pressed and active for the scanner to, actually, locate the frenquencies within the trunked groups. Having read through the manual several times began to make things much clearer!! The Pro-94 is working great now and is picking up both trunked and analog frenquencies.

Hi Harry, All,

I agree, to a point. Most of these manuals seem to be written by folks who don't know dog poop from shoe polish. (Do guys still actually "polish" shoes nowdays? Haha)

I had to go over the Pro-94 manual about 100 times and STLL could not figure it out. Finally, on of the local scanner guys showed me and it became a lot clearer on how to do it.

Now, the Pro-2051 manual was written by an orangatan living in Borneo, I believe. It's as clear as mud. This is worse than the Pro-94 manual.

No all of us are 'rocket scientist', a Phillidelphia lawyer or a *Whiz kid* ('member that phrase?). Scanner manufacturer's should take pity on us and either provide software and a written manual, WITH the scanner to provide very clear and distinct *instructions* as to the proper operation and programming of their product.

Also, if they want me to purchase their product, they also should supply the programming cable WITH the scanner. This would end the driving all over World to EVERY Radio $hack to chase down the some times 'non-existant', out-of-stock and discontinued cable. Hey! I would be willing to PAY for the cable to be included.

After about 50 tries, I finally got my 2051 programmed, but didn't write down the sequence. It does work, but continues to show "talk groups" I don't wish to follow. "Deleting" them or attemting to "lock-them-out" does no good. So, if it goes down, it can be found in the "File 13" at my QTH.

Scanner manufacturer's should also provide a way to 'dis-able' or delete the "pre-programed" frequencies as an "option". This seems rather stupid since after 9/11 most agencies have "gotten off the beaten path" and have multi-channel radios that use "secret" channels or they use cell 'phones to communicate sensitive information. Although not "advertised" the Shreveport Police have secret digial frequencies that they talk on. I don't have that capability to de-code the messages but I know they are there. <wink>

My Pro-94 (plain) finally "bit-the-dust" and I gave the old gal a decent burial, LOL! I am looking to buy a "B" model,if I can find one. R$ has the 94 'on-sale', but it makes no distinction as to whither it's a "B", "A", of 'plain vanilla', LOL! Yeah, I know, the Pro-95 is 'on sale' and it does 'alpha tags', but I don't care for the chrome look. It looks more like a "CB walkie-talkie", (aka. "Toy") than a serious business band scanner or 'police radio', LOL! (No, I don't have a *Deputy Do-Right badge*, lights, siren or toy gun, either).

Well, it's a GORGEOUS DAY outside. Sun is shining, it's gonna get warmer today, near 70º and low humidity. Think I'll cruise out on the front porch and listen to the sounds of helicopters, Whaaaamblances and police cars whizzing down one of the main drags in Shreveport, LA. I'll have my trusty, 'rusty' Pro-90 with me, LOL!

Have a GREAT DAY all!
Respectfully,

From: Christopher
Topic: 4092 Message: 4092

I'm an amatuer scanner, scanning now for a good year. I know this group is comprised of experts who scan during the day while their at work. Where are the scans from 9-11? I'm talking about fire and police scans that talk of bombs going off and unexplained explosions. Conversations from police and fire are public information now and they talk about explosions going off. But I know that the scanner community has more evidence. Is there a blog I can go to so that we can hear the evidence? Why aren't there any messages here in this group about these scans?

Thanks

Chris, All,

I'm not aware of any recordings of "bombs going off" or "unexplained
explosions" during 9/11. During that fateful day, I'm sure there
were some "unexplained explosions" but they could have been caused
by anything. Also, you KNOW that our "government" doesn't tell us
EVERYTHING...Area 51...UFO crashes, who killed President Kennedy...
all under the guise of "it wouldn't be good for us to know."

I'm not going to start looking for conspirecies (sp?) right now.
I'm here to have fun with my scanners listening to 'local' traffic
about fires, wrecks, who shot who, drug bust, etc. If I get bored,
I can always fire up the Icom 706MkII-G and chat awhile too. ;-)

Respectfully,
73,

First of all where do you live? I'm in Columbus, Ohio and have no problem hearing what I call the "stupidity of humanity" at any time of the day or night. The Columbus Fire Dept. Bomb Squad doesn't make a run every day but the FD does it's fair share of fires, traffic accidents on 5 freeways, water rescues and whatever else. I listen to the PD very little, but when I do, one of the fun things is listening to the vice squad. So I'm thinking that maybe there just aren't enough things going on in your area or you don't have the right freqs/talkgroups programmed in the scanner. The police and fire conversations are public information to the point that you can receive them. If they are encrypted or agencies in your area are using a digital system for all or part of their operations, you'll hear nothing.

I agree, to a point. Most of these manuals seem to be written by folks who don't know dog poop from shoe polish. (Do guys still actually "polish" shoes nowdays? Haha)

Lot more easier to get corfam, easier to take care of.

Now, the Pro-2051 manual was written by an orangatan living in Borneo, I believe. It's as clear as mud. This is worse than the Pro-94 manual.

I believe that the orangutan did the manual after it was translated from the original Tiawameese into Russian and then to Spanish.

After about 50 tries, I finally got my 2051 programmed, but didn't write down the sequence. It does work, but continues to show "talk groups" I don't wish to follow. "Deleting" them or attemting to "lock-them-out" does no good. So, if it goes down, it can be found in the "File 13" at my QTH.

I stumbled across page 77 or 76 that tells how to do the programming with the computer.

My Pro-94 (plain) finally "bit-the-dust" and I gave the old gal a decent burial, LOL! I am looking to buy a "B" model,if I can find one. R$ has the 94 'on-sale', but it makes no distinction as to whither it's a "B", "A", of 'plain vanilla', LOL! Yeah, I know, the Pro-95 is 'on sale' and it does 'alpha tags', but I don't care for the chrome look. It looks more like a "CB walkie-talkie", (aka. "Toy") than a serious business band scanner or 'police radio', LOL! (No, I don't have a *Deputy Do-Right badge*, lights, siren or toy gun, either).

The 95 looks a lot like the 94, it is the 97 that has the 'new' look. I have both.

Well, it's a GORGEOUS DAY outside. Sun is shining, it's gonna get warmer today, near 70° and low humidity. Think I'll cruise out on the front porch and listen to the sounds of helicopters, Whaaaamblances and police cars whizzing down one of the main drags in Shreveport, LA. I'll have my trusty, 'rusty' Pro-90 with me, LOL!

I have 2 inches of snow and 24 degrees at 0800, with nothing but peace and quiet in the White Mountains of Arizona.

Have a GREAT DAY all!

Buck, I agree that the chrome is a little much on the 97 but opted for it after my 95 was stolen from my car. It is a heck of a radio and Don Star's software allows you to download everything from Radio Reference and then manipulate it. I liked the old 95 and still have a 94 (also unknown flavor). I've gone through the pain of dumping all information and having to reprogram all freqs and talkgroups. I'll take the computer over that any day, chrome or no chrome. During a recent convalescence from foot surgery, I acquired software for two 2 meter portables and my Icom 208H. Being able to program things on the fly is pretty neat. Lets you move around the country on vacation and build new templates in your leisure. Happy radioing. BR KC8WHK 73's

From: Stan Stone
Topic: 4084 Message: 4098

Here is how I program my Pro 94... go to
http://www.radioreference.com/ and find your frequencies for your
city... then.....

press manual
hold down A/B choose A or B
pick a channel number your not using (ex 14)
hit program
enter frequncy number (123.456)
press E

if it screws up in the middle shut if off and turn back on to start
again.... or see if it inputed right...

I believe this is right since I am doing this from memory... please
correct me if i have given incorrect info so as not to confuse the
poor guy trying to do this for the first time..I have a older pro94
and dont feel like taking there stupid clip off to read which one I
have... so I am sure the newer ones may be different... good luck

Buck,

Thanks for the reply. The NYFD and NYPD is on tape and video explaining that they heard explosions going off before the towers crashed. The NYFD is also on tape saying that they're going to "pull" tower seven. But I know there is a scanner out there whose got it on tape somone whose got more on tape than has been released to the public. Is there any blog where FD and PD recordings are available?

Thanks again,
"Chicago"

4101. Internet Scanners.... Anyone know of some good Internet Scanner Software?

Yahoo group: pro94owners
Date: 2007-02-21 02:53:23 UTC
From: Stan Stone
Topic: 4101 Message: 4101

Does anyone know of a good internet scanner... the kind you buy the software and listen to police departments all over the U.S. and world... I dont know if thats taboo in this group or not but I would like to listen to Los Angeles and New York etc... Can anyone advise of a good one? Tried a couple off Ebay and not too impressive... they were satelite scanners... Please advise... thanks

4102. Antennae's for Pro 94-I Use a CB antennae

From: Stan Stone
Topic: 4102 Message: 4102

This topic should start some chatter... I use a CB antennae for my Pro 94... compared to the rubber duckie... it works 10 times better... I wonder if it is worth the expense of getting a scanner antennae that mounts outside on the roof... I have a 20 foot fiberglass mounted in my basement horizonally... and believe it or not... it works great..so check out
this... and let me know what you think is the best scanner antennae.....

4103. Pro 94 B-weird problem

Yahoo group: pro94owners
Date: 2007-02-25 23:33:21 UTC
From: peak1nc59
Topic: 4103 Message: 4103

I have used the unit for over a year now with no problems, but today, I got it out to use. The batteries have been out of it for two weeks. It started up alright, and started scanning. The scanning stopped and the display said what looked like "wired". Now that is all it displays. Any one have an idea what it is? Or how to fix it? Thanks.

All silliness aside, have you tried turning it off, then pressing
#2 & #9 down and powering it up again? This resets the unit, but
you will have to re-program the frequencies and talk groups back
in.

BTW, all,

I'm LQ^QKing for a GOOD,USED,& reasonably priced 94B.

I checked Radioreference.com and the whole system is still on low band as you say. The only thing I can think of is that you are trying to enter it as a trunked frequency and that's why it's kicking it back. I can't think of anything else that would cause it to do that.

From: Mike
Topic: 4109 Message: 4112

A very common mistake is to press PROG rather than E after entering a frequency.

Press PROG to enter programming mode.
Enter the channel number you wish to program and press PROG again.
Enter the frequency and press E.

4116. Programming a base and offset frequency - need help

Yahoo group: pro94owners
Date: 2007-03-26 20:43:23 UTC
From: rtuchmayer
Topic: 4116 Message: 4116

I am read the manual, and am unable to program a frequency I want to listen to.
I follow the instructions, press program, press trunk, select an open bank, and then it displays the first channel in the bank. That is where I get stuck. If I enter a frequency, I get a beep and nothing happens. If I pre-program a frequency and then press the alt/data button, it beeps.

I am tryign to program the following, frequency =462.97500, input =467.97500, tone = 203.5pl.
If someone could please help me, I would greatly appreciate it as I am banging my head trying to understand this in the manual.
Thank you in advance.

You only need the output frequency to hear both sides of the conversation.
On a scanner, the PL isn't really necessary either.

My experiance has been be prepared to layout big bucks from RS if you
send it to them They typically swap out boards.
You may want to go on line and get the Servive Manual and Parts list,
You maybe able to sourse and replace yourself.

Availability of the Svc Manual will be nil. RS has done this so that there is no reverse engineering. However there are two types of jacks used on a pc board, one is open and the other is enclosed. If they used the open type on you board, you might be able to remove the broken bit from the jack. If it is the enclosed type, you can probably locate the replacement part and do a little soldering.
Swapping out the boards may be prevalent in canada, but the centers that I have dealt with usually replaced the part. It was cheaper for them.

Thanks for reading this.
I have a Radio Shack pro-94 part number 20-524
I would like to program it via a computer, but I am told theres 2 models, problem is how do I tell which one I have, the non-computer programmable or the good one?

Second question is, Is there any way to get these to adapt to the Michigan APCO-25 or at least be able to scan those frequencies as is, so to speak?

Third question, is where can I find, or ca n I make a programming cable from laptop USB to this scanner? And where can I obtain software to program if this unit can be?

I believe you can tell the model by looking at the product nameplate on
the back of the scanner and looking for a siffix letter of B following
the model number (20-524B). The older units are not computer
programmable.

> Second question is, Is there any way to get these to adapt to the
> Michigan APCO-25 or at least be able to scan those frequencies as is,
> so to speak?
>
I do not believe that this scanner is APCO-25 compliant. You will need
to upgrade to one of the "digital" trunktrackers from Uniden or
RadioShack (such as the Pro-96 or the BCD996T) to monitor an APCO-25
system.

> Third question, is where can I find, or ca n I make a programming
cable

If your scanner is the correct model, Radioshack should carry the
proper programming cable.

Tim

1. You have to have a Pro94B to program it by computer. EWither look at the black tag on the back of see if there is a PC/IF jack on the side.

2. No they are digital and you can't copy digital

3. You will have to look on the net for the cable or check the files, there may be the info in there. I bought mine at RS
The s/w can be either Scancat or Don Starr's

My scaner noether says its an "a or b" model so I assume I got shafted by Radio shack once again. When I bought it I was told it was programmable.

I believe you can tell the model by looking at the product nameplate on the back of the scanner and looking for a siffix letter of B following the model number (20-524B). The older units are not computer programmable.

> Second question is, Is there any way to get these to adapt to the

I do not believe that this scanner is APCO-25 compliant. You will need to upgrade to one of the "digital" trunktrackers from Uniden or RadioShack (such as the Pro-96 or the BCD996T) to monitor an APCO-25 system.

If your scanner is the correct model, Radioshack should carry the proper programming cable.

4147. pro-94 keypad mods

Yahoo group: pro94owners
Date: 2007-05-06 13:07:29 UTC
From: DARRELL STEELE
Topic: 4147 Message: 4147

here's a list of keypad mods that i found for my pro-94.

any ideas what some of these tricks are used for?

```
*****************************************
Realistic/Radioshack pro-94 keypad mods:
*****************************************
hold 2/9 turn on -> total reset
hold 2/9/hold turn on -> 144-153.980mhz
hold 2/9/scan turn on -> test frequencies
hold 2/9/prog turn on -> trunk ct -- --- hold
hold 2/9/enter turn on -> display test
hold 2/9/src turn on -> search: 510-512mhz
hold 2/9/alt turn on -> 00 00 00 NOTE:use up and down too change
settings.
hold 2/9/. turn on -> H or L NOTE:hit delay too change settings
hold 2/9/4 turn on -> (3.00) then it changes too (32 2ch) then
back too frequencies
hit any key,each key sets different test
frequencies.
hold 2/9/8 turn on -> total clear
hold s/s turn on -> turn BEEP on / repeat step,BEEP is off
hold h/s turn on -> turn SAVE on / repeat step SAVE is off
hold keylock turn on -> turn AUTO-LIGHT on / repeat step AUTO-LIGHT off
```

4162. "Talk Groups" Arrrgggghhhhhh!!!!

Yahoo group: pro94owners
Date: 2007-05-30 13:26:04 UTC
From: Don
Topic: 4162 Message: 4162

Good Morning All,

Well, I got a new-2-me, Pro-94, old model...no programming port. I've re-programmed the scanner to scan the Caddo 911 800 mhz system. This is a parish-wide system and nearly all agencies are on it.

I have entered the "Talk Groups" I wish to monitor via the programing way. It works, with the exception of also picking up the talk groups I *don't* want to listen too....Dog catcher, etc.

My solution is to hit "lock-out", but this fills up too fast and will not take any more blocked talk groups.

Suggestions? They use the Motorola Type II system, but I'm not sure of the "blocks" (1-16) they use to only hear certain ones.

ANY and ALL "help" would be greatly appreciated. I have other systems in as well and they do the same thing.

Respectfully submitted,
73,

"Buck"/K5-MKE

Understanding what trunking systems are will help quite a bit. Try reading a few tutorials first, such as:

http://www.signalharbor.com/sr/05apr/index.html
http://en.wikipedia.org/wiki/Trunked_Radio_Systems

Next, read the scanner manual.
Repeat above step.
Repeat once more.

Read this walkthrough. However, ignore the statement about pressing UP instead of PROG to select the next channel.

http://support.radioshack.com/support_tutorials/communications/200-0524/6735
4.htm

Now sit down with your scanner and frequency list and attempt to program the system. If you are still having trouble please let us know what you are doing and what the scanner's reponse is.

None of the Starrsoft software will work with the Pro-94. His programs are all for the GRE scanners and no support is ever anticipated for the Uniden made scanners.

It sounds like you are never entering the talkgroup ID scan mode. When the system starts trunking, are you seeing "-- ---" on the display (and SEARCH in the lower right corner?) If so, simply press SCAN to enter the ID scan mode. You will see "ID Scan" scroll across the display (or a talkgroup ID) and SCAN will appear in the lower left corner.

The InterNet is not a good place to be clueless. And at the same time, so
many who are here are such.

> My name is Russ and I am new to radio scanning. I live in San Francisco

If you can sub to a mail list, you can program your scanner. Research the
several programming manuals that you can get when you Google "Pro 94
Programming. Find one that you work well with and experiment with your
scanner.

I'm fortunate in that the agencies I monitor use the Motorola system and
once I put all the individual frequencies in, the scanner put a little M on
the display and handled the talk groups on its own.

D.

Topic: 4175 Message: 4175

Hello all.
I'm new user of PRO-94.
I got two questions:
What type of backlight is used? Colored bulbs or LED diodes?
What size of LEDs are used? I want to change color of backlight.

I want to use rechargable cells 2700mAh carpacity.
How is realised charging them? What current flows to the cells and how
it is protected from overcharging? I don't want to kill them too quickly.
Thanks for replays, Mike

LEDs. I would imagine 0805 size surface mount. There is a service manual available for download.

>I want to use rechargable cells 2700mAh carpacity.
>How is realised charging them? What current flows to the cells and how

The internal charge circuit is a simple dropping resistor to limit the current. Specs have been dertermined and should be searchable in the archive for this group. For best results with NiMH batteries, an standalone "smart charger" designed to handle NiMH cells is recommended. This has also been much discussed, and a search of the archives will reveal the information.

4178. PRO 94 diagnositics problems

Yahoo group: pro94owners
Date: 2007-06-25 18:37:12 UTC
From: ask and you shall receive
Topic: 4178 Message: 4178

i recently bought a pro 94 and I am having the following problems iwth this used unit.

1) There is NO power jack on the side of the scanner, it has been removed from the pcb.
2) When powered up the battery low indicator with come on within seconds. Then automaticly shut off. I have put new batteries in this unit.
3) When the volume is turned up there is a loud feedback squeal from the speaker.

The problems are most likely related. Typically a DC power jack in this sort of application has mechanical switch contacts to connect the battery directly when not plugged in, and through a dropping resistor to charge when plugged in to external power.

You are getting the low battery signal because, without the jack there, you are powering the scanner from the battery through the charging resistor. Likewise, the audio feedback is happening because you don't have a clean, low impedance power source.

You need a PCB mount power jack of the correct footprint to mount on the scanner's circuit board. One of the major parts houses (Digi-Key, Mouser, etc.) may have a suitable part. The best solution would be to try ordering a direct replacement from Radio Shack. The service manual is on the internet somewhere, I think - Google for it or check the files section of this group. Go to a Radio Shack store with the part number of the jack, find a sales droid who has a clue, and they should be able to at least try to order it for you.

Isn't that actually the white switch directly below the latch in the battery
compartment?

If memory serves, the white switch takes the charge resistor out of the circuit entirely (which would be highly desirable if one were to use alkaline cells). With the switch in the alkaline position, the scanner would (in theory) not operate at all.

Someone with a schematic handy can correct me it I'm wrong....

Asked and answered, many times. Search the group archives.

>also the surface mount charging adapter is missing, looking at the
>schematics from radio shack i see no listing for this part any ideas
>as to what that number may be so i can maybe order it from someone ?

You'll probably have to do some detective work and call some parts houses to
see if they can sub it for you. What you need is a coaxial power jack,
surface mount, that has the proper footprint. The actual plug/jack conductor
dimensions are irrelevant as long as you can fit it in the space provided.
Then you can get an AC adapter with the matching plug, and away you go.

Denise;

The Radio Shack #20-047 USB-to-Serial Scanner Programming Cable is listed as compatible with the PRO-94B. I used it on my PRO-83 and it's amazing! I'm working on figuring out the use of the cable with the 94, so I'll let you know if I can get it to work.

I'm trying to search the group posts now for any info on file format/software required to program the 94B, so far, no luck.

>How can I tell when a rechargeable battery is/going bad? What type of
>test can I do?

There are two basic tests that you can do. The first is a voltmeter test which will tell you if a cell is at least functional. A working cell will have a voltage of 1.2 volts or higher when charged. Multiply this by the number of cells in the pack if you are measuring the voltage at the battery pack terminals. Individual cells usually fail by shorting internally, so a bad cell will measure around 0 volts, and the pack voltage will be lower than it should be for the number of cells.

If you have a shorted cell, it's best to replace all the cells in the pack. Otherwise, you end up with mismatched cells, which will cause problems later.

The other test is, basically, a runtime test. If you notice a signifigant decrease in the number of hours that your scanner will run from full charge to low battery shutdown, that's a good sign that the cells are wearing out (note: this can also be a symptom of a single cell shorted, use the voltmeter test). If the degradation isn't too severe, somtimes you can bring them back by "excercising" the pack a few times; i.e., run it down completely, then recharge fully. Again, replace all cells at the same time if you determine they are bad.

There are sophisticated battery testers on the market that will test cells for both of the above conditions, and even recondition them if possible, but they are usually a bit pricey.

Be sure to properly dispose of bad cells per recycling guidelines in your location.

Hope this helps.

Put it under a load and discharge it against time. If the time interval is shorter than the new battery discharge curve, the battery is going south.

Also, rechargeable are good for approximately 300 charges and discharges.

Good, but the voltmeter test should also be done to check for shorted cells.

> Also, rechargeable are good for approximately 300 charges and discharges.

Depends on the chemistry. Properly managed, NiCd can have a cycle life of
1500, NiMH 300-500. Reference:

Not trying to come off as a know-it-all... :) I did a lot of online research on batteries a few years back after hearing tales of phenomenal NiCd life in spacecraft. I came to the conclusion that NiCds don't suck after all, and learned a lot about other battery chemistries as well. They all have thier place.

You did not come-off as a know-it-all.....

Currently, I am working on a 30 watt, portable fuel cell. We are testing it in a micro repeater this week end. It is used in conjunction with a gel cell and will support transmit and receive very well - Frank

Not trying to come off as a know-it-all... :) I did a lot of online research on batteries a few years back after hearing tales of phenomenal NiCd life in spacecraft. I came to the conclusion that NiCds don't suck after all, and learned a lot about other battery chemistries as well. They all have thier place.

Neat stuff, Frank. Is this a commercial fuel cell, or did you homebrew it?

4203. New User Help

Yahoo group: pro94owners
Date: 2007-07-25 19:26:22 UTC
From: sidbartos
Topic: 4203 Message: 4203

Hi I'm Sid and I'm new to the scanning world. I just purchased a pro-94 on ebay and am getting familiar with it. I really need help with this trunking stuff. How do i listen to my local police department?? I've looked at the info on radioreference.com...i just don't know how to put it in my scanner and listen. Can anyone help?

4205. Re: rechargeable batteries

From: grnbayfandan
Topic: 4194 Message: 4205

I also just learned alot about rechargable batteries and found that NiCd cells are good but I also learned that (for my scanning purposes) Ni-MH (nickle metal hydride) cells are better and they come in different mAh (milliamp hour).

I currently use Ni-MH 2500 mAh in my pro-94 and can scan for approximately 4-5 days without recharge (depending on radio traffic), then when the batt low beep comes around I let the cells drain completely and then recharge for about 8 hours. I know I don't have to do this with these being mercury-free, but it's old habit and some are hard to break, lol

Just my input

73

Dan

4209. Hmmmm, "B" band access ?

Yahoo group: pro94owners
Date: 2007-08-12 03:44:37 UTC
From: ka5lqj
Topic: 4209 Message: 4209

Ok,

I don't have my Pro-94 (plain) manual with me at the present.
I do know you can program each bank with up to 50 frequencies
per bank, making 500 per the A/B selector.

My question is: Once the 500 channels are filled up, HOW would
you go about accessing both A and B sides to scan making it the
advertised 1,000 channel scanner. I already know how to access
the "B" side, by holding down the "HOLD" button until is it
changes to the "B" side.

Is it possible to scan ALL 1,000 channels in the 20 bank series?

I just found out, after 5 years, that mine will scan Trunked
AND Conventional frequencies together, when the trunked signals
no longer "capture" the scanner. Yea!!!! I can listen to my
trunked banks, then it switches over for me to hear my ham FM
repeaters on 10, 6, 2, & 440 and does conventional trunking of
VHF and UHF Fire, EMS, and Police band frequencies as well.

Well, it's been a long day for this Caju Cowboy. Headed to
the Bunkhouse.

Respectfully,
73,

I think you can't do it, but I had never fill the 1000 channels to try it.

Well,

If you can't scan both the "A" & "B" sides simultaniously, it's "Snake Oil", false adevertising on Rat $hack's part. It is only a 500 channel scanner each side. So, you can either listen to the "A" side or the "B" side but not both together, or scan the 500 "A" side then have it automatically switch to the 500 on the "B' side.

Now, being in *Radio Alley* around here, Ham, Police, Fire, EMS, Local, Parish, County, State, Federal, Business, Military, Air, and etc. radio traffic, I could concieveably fill the 1,000 of the channels on the Pro-94 with no problem, LOL! And yes, I'm THAT nosey, hehehehe.

Thanks for the answer, Luis.

You still got a 1000 channel scanner, but just can scan them all at the same time. I think.

4214. Pro 94 Problem after changing batteries

Yahoo group: pro94owners
Date: 2007-08-18 00:51:04 UTC
From: pd821
Topic: 4214 Message: 4214

Hey everyone, im having a problem with my Pro 94 after changing out the batteries. The batteries started going low, so i changed them. I turned the scanner back on and now the screen displays what looks like the word "wired" and the small "pgm" symbol. I've attempted to reset the scanner with no luck and the buttons dont work. Radioshack doesnt have a clue about the problem, Does anybody have any suggestions or comments?

OK,
I can't see well enough to tell. Is the guy disco'n in the Capital One Banking ad, "Bevis" or "Butthead", LOL!

Now...back to the original: Getting another Pro-94 IS really a good option. Mine "tanked" near Christmas, never to be revived again. (:-(But, awhile back I found one on a certain ham website and it was reasonably priced. When it arrived, it was all I had wanted, in a 9 out of 10 condition and has not missed a call. (:-)

I'd really LIKE to have a trunking, desktop/mobile scanner that allows you to scan not ONLY the trunked, but also does conventional trunking as well and does alpha tags. We don't have much digital trunking going on here and I'm not really interested in that, anyway. Suggestions?

Well, I'm working on building a "Lindenblad" antenna (circular polarization). It's omni-directional and will receive both vertical and horizontal signals at the same time, same strength for 2 meters.

Respectfully,
73,

Don/KA5-LQJ

Let me think if I'm getting this right. You want to scan a regular channel, a trunk bank at the same time and set the regular channel as a priority?????

I'm not 100% sure on this but I think you have to program that frequency on channel #1 but if that channel is very busy the trunking is not going to happend until the priority channel clear up.

If my assumption is correct and this directions don't work for you let me know and I'll double check my manual and post the findings because I think I have done that on mine.

Other way around this could be to program one bank for the trunking and programming the regular channel in another bank and try to listen to those two banks only, but again if the normal channel is very busy the trunking is not going to happen until the normal channel clears up and vice versa. I think that this may be what you were doing right????

Cam,

What frequency is the Mississauga Fire Dispatch? Is it a conventional low-band FM (30-50 mhz), a VHF FM (150-174 mhz), UHF (450-512 mhz) or an 800 mhz non-trunked? Yes, there are some. Knowing this would be helpful for us to know to help you.

I can scan trunked and conventional frequencies, but the trunking control channes have to stop receiving signals from the cars to let the conventional channels start scanning. My bank of ham repeaters has a priority channel...146.670, a local ham club and in bad weather, it's the Skywarn repeater. But, when 146.67 becomes "active", it does not "take over" and break into the trunking scanning.

You may have to pick up another scaner, just to monitor the Mississauga Fire Department.

Best of luck.

Yes you are right....On my 94 I scan trunked channels...for example....I scan Miss fire : 4 channels....they are our 4 main operating channels.....as well you can see our Dispatch Channel being scaned as well...it is a priority channel...put in (programmed) as a normal frequency, you can see it being scanned, so at the same time I am trunking the for talkgroup channels the dispatch is scanning as well.... My 94 was programmed for me.....I am just setting up my son-inlaws 94.....it is easy to program all the frequencies and the related talk groups ids....just not sure on the one thing...I know that in programming frequencies the 1st one is automaticly set as priority....not sure if this dispatch frequency goes in the trunking area of frequencies/ids talkgroups or if it goes into the regular frequecy area....sorry my terminology is kind of bad Thanx a million.....CAM

Ok the frequency is 414.58750... Mine does it fine so the 94 is capable...I am just setting up son-inlaws....mine was programed for me....For your info here are the 4 main fire channels I scan...just the Talkgroups ids ...of course the are the trunking frequencies as well, don't have them with me right now I am at Firehall working.

414.58750 B 103.5 PL Station Dispatch FM
851.15000 M CH 2 Talkaround FM
851.62500 CH 4 Talkaround FM
852.27500 M CH 1 Talkaround FM
852.95000 CH 3 Talkaround FM

Thanx Cam

4225. Astro 25

Yahoo group: pro94owners
Date: 2007-08-19 16:18:24 UTC
From: Robert
Topic: 4215 Message: 4225

Our local police department was convinced by Motorola, to upgrade their 10 year old trunking system to the ASTRO 25 system (9600). They have spent over 6 months preparing for this, and upgrading the system. It's about to roll out live shortly. Which means that the Pro-94 and 2051 that I own, are basically dust when it comes to scanning local PD frequencies. It also means that I'm forced to upgrade to one of the $500 scanners on the market that is ASTRO 25 capable.

Normally, this would aggravate most people. But, having been a scanner buff since the early 70's and remembering units like the SBE which used "punch cards" to program, or the first Bearcat 210, or the early crystal Patrolmen scanners.. I can only attribute it to another upgrade and another unit that will go into my collection of old radios & scanners gathering dust in the storage building.

Robert

Dear Bob,

Unfortunately for scanner folks, This will be the the standard, rather than the exception. Most new systems will be uniquely scrambled so that only the user agency will be able to monitor and transmit. This means no more listing to departments that can afford these type of systems.

This technology is driven by the "bad guys" that utilize police radio information to their advantage.

I guess we will be relegated to monitoring air traffic and 2 meter repeaters.....

APCO-25 (not Astro) standard isn't driven by bad guys, but is a result of crowed bands.
Spectrum space is at a premium and as more and more users come online, digital
radio allows you to squeeze more users in a smaller space compared to analog.

Another thing APCO-25 does is standardize digital communications so you don't have a fire dept using Ericisson digital which is incompatible with Motorola, etc back before any standards.

No scanner conspiracy involved. Just spectrum management.

4228. RE: [pro94owners] Astro 25

Yahoo group: pro94owners
Date: 2007-08-20 04:21:47 UTC
From: Robert
Topic: 4215 Message: 4228

I agree, Tom, with the facts presented. But, in this area, it seemed to be a little overkill for the agency here. Besides, visiting with their communications department and also knowing one of the Motorola guys (a ham) who's been doing the work.. It seems that they caught a grant from the state to offset the upgrade, and also "supposedly" Motorola was wanting to "showcase" the system in this area. Which might lead to further cities considering expending money. Perhaps that sounds a little too political..<grin>

I don't disagree with what APCO-25 and the ASTRO-25 format is capable of, and what it's designed for.

As to Frank's comments: From what I understand, they will continue to do what they have been doing for the last 10 years. And that is: The only encrypted traffic would be certain tactical channels/frequencies. I've heard that normal dispatch of PD & Fire will continue to be broadcast in the clear, along with normal patrol or "car to car" channels. And, this is all I care to listen to anyway. I could care less for the tactical channels. Maybe about 25 years ago when I worked in television news, I'd be a little more concerned. Now, it's just a hobby..when I even have time.

Thanks for the follow ups..

Robert

Yea, politics wins if there is the possibility of grants or
matching funds involved. Always. A lot of the time
small departments have funds they have to spend.
New comms gear is a good way to spend it.

I was with state govt emergency management communications
for a good many years (state shall remain anonymous) and
the debate started back in the mid 90's or so, I believe. I don't
remember the exact year the Motorola Astro line came out, but the
first generation weren't APCO compliant if I remember.
The latest bunch, AFAIK are the same digital radios, but
are simply APCO compliant, hence Astro 25.

My boss back then did spectrum management, so he was in the
thick of the mess. And it's still stewing. Back then it was
just APCO to worry about.

BINGO! politics wins if there is the possibility of grants or matching funds involved. Always. I was with the the state of TN emergency management for over ten years (should have stayed there.. grrr) and the debate started back in the mid 90's. My boss back then did spectrum management, so he was in the thick of the mess. And it's still stewing. Back then it was just APCO to worry about.

Doesn't it really mean a simple escalation of technologies? I'm relatively familiar with current scrambling and am well aware that scanning cell frequencies is illegal. That said, I still have access to scanners that do both and do both fairly well. You just can't legally buy them here in the US. You can get them damn near every where else on earth, just not here.

Also, I know of one specific district court ruling that allowed a private company to decode local police transmissions (provided the decoded messages were not used in a criminal manner) due to their initial broadcast over publicly owned airwaves. (Hint - the PC/Scanner link can be used for quite a bit more than programming.)

What is going to keep AOR, Alinco and the rest (or some Joe like you or I) from developing the technology to scan the Astro 25 system just like they have with everything else to come down the pike?

> This technology is driven by the "bad guys" that utilize police radio
information to their
> advantage.

Not to pick on you, but are fire and police reserves, news agencies, private investigators, shut ins, retirees, enthusiasts and archivists included as "bad guys" as well as drug dealers and the such? I know my old fire crew had a kick ass response history because we'd leave a scanner on and every once in a while our captain would load us up and "just head over there." My best response ever was less than one minute after our station was dispatched. I wonder how those sort of things happen? And yes, a couple of those calls were police activity that we weren't supposed to be aware of - when in all reality we should have been posted for an FMS.

Methinks the Astro 25 will only mean many of us will suffer a decrease in cash and increase of difficulty where scanning is concerned. I'm sure many will stop there. Much like a poker game - as the stakes increase, players drop out.

Cheers,

D.

The reason for rebanding ; we are having to change to digital systems. because cell phone usage is becoming so popular they need more space .Cell Phone Companys are buying back spectrum radios and giving grants to departments to reband. The FCC is pushing rebanding. You can still listen with a Digital scanner like the pro 96 or the pro 2096 , yes they are $500.00 scanners but you can sometimes get a deal on ebay
.

From: ka5lqj
Topic: 4215 Message: 4233

Hi Cam, All,

LOL! I was going nutz trying to figure out why these frequencies didn't "match" the bandplan I had for the USA. You're near Toronto, CANADA, Peel County, eh? LOL! Ok, dat 'splain's it.

Now, I went to www.radioreference.com, changed the search to Canada and looked up the frequencies. Now, it appears that the 414.5875 mhz is a simplex base frequency. That should go in Bank 1, Channel 1, the primary channel.

Now, as for the others, they appear to be simplex frequencies as well. Channel's 1 & 2 have an "M" by them -probably simplex mobile (truck) radio's for fireground or fire scene use.

A base set up at or near by station could hear and work the "mobiles" as a "mobile" itself.

Channels 3 & 4 are probably for "portable" use, (aka. handi-talkies) and could conceiveably work the truck radios, as the truck radios double as a portable "extender" (mobile simplex repeater). Confusing? You bet, LOL! But I've been in the communications business since 1964, when I got my 2nd class Radio/Telephone license and was allowed to work on two-way radio systems. I was 18 years old.

I would TRY putting the 800 mhz frequencies in the same bank as the 414.5875 mhz frequency and NOT trunk them, let them scan as "conventional" frequencies and see how you come out. If that doesn't work for you, put the 414.5875 in Bank 1, Channel 1 and the others (according to numerical channel designation..1,2,3,4.) and see what happens.

Respectfully,
73,

4234. So Far, so Good here, LOL!

Yahoo group: pro94owners
Date: 2007-08-28 01:36:32 UTC
From: ka5lqj
Topic: 4234 Message: 4234

Well,

So far, the only local agency to go "digital" is some of the "sensitive" transmissions (like we care) of the Bossier Parish Sheriff's dept. More than likely it's their SWAT/Drug bust guys. I don't do drugs and they're in the next parish over from me.

When the Caddo 911 Communications Dist. #1 asked for bids for their new 800 mhz trunked system, all the comm shops competed for the bid. The local Motorola shop went to Motorola and got together to put in a bid. Then, at the last possible moment, Motorola stepped in FRONT of the local Moto shop and underbid them, winning the contract. To add insult to injury, the local Motorola guys have to "service" these rigs and take what Motorola pays for "warrantee work". Word has it that the local Motorola shop will close soon and there will BE no two-way shops of any kind in Shreveport or Bossier City, LA.

The Motorola system, tied in with laptop computers, never has "worked" properly. The cars are constantly calling in saying the computer has "locked-up" or is broken so they have to go "by voice". That puts each officer in real danger, because the Motorola "handi-talkies" don't work much better. SO, if an officer has to call for back-up or "help" they are SOL.

Respectfully submitted,
73,
Don/KA5LQJ

4235. New member & an amazingly stupid question

Yahoo group: pro94owners
Date: 2007-08-23 11:54:37 UTC
From: Rick
Topic: 4235 Message: 4235

Hey guys,

Just joining up. Figured after having this scanner for a few years I might as well start getting some real use out of it.

When I got it I programmed in our local fire & police (trunked) and have used it in just that mode since.

It's been a great little scanner and compared to one I had before this it gets great battery life.

Now, here's the stupid question that for the life of me I can't figure out - How does one manually enter a frequency to the scanner? I can program them into the trunk but not manually elsewhere.

The example in this case is I want to try ACARS monitoring. I got a piece of software called WACARS and set it up, plugged in the scanner and eventually just scanned up with the squelch off using the up arrow to 131.550 MHz.

My old scanner I would've gone to MAN mode, entered 131.550 and hit E but this one just beeps and the goes to my first trunked frequency squelch off.

Rick

OK, could you share this little trick? I thought the same thing - that you could only scan trunks. Mine seems to ignore everything when Trunk is enabled. What am I missing?

Rick

4237. Re: Hmmmm, "B" band access ?

Yahoo group: pro94owners
Date: 2007-09-05 13:16:53 UTC
From: ka5lqj
Topic: 4209 Message: 4237

Hi Rick, All,

I have all my "trunked" stuff in the first 5 banks.

Bank 1: Caddo Parish 911 Communications District
Bank 2: Bossier City, LA Public Safety
Bank 3: Bossier Parish Sheriff's Dept. (analog) Digital just makes a "whooshing sound, LOL!
Bank 4: Louisiana State Police (Shreveport, LA)
Bank 5: Louisiana State Police (Fillmore in Bossier Parish)

Now, in Bank 6, I have manually entered the local ham repeaters and other ham simplex fm frequencies (10m thru 70 cm).

In order to do this, take it OUT of trunk mode, by pressing the TRUNK button and "Trunk" disappears from the screen. Go about selecting the next available bank and program as you normally would.

When the first frequency comes up in that bank, hit "PGM", then input the frequency, then hit "E". I always use the "Delay" button next so I can follow the conversation as it progress's, then hit "PGM" again and continue until you have all the "conventional" frequencies in. Once your finished, hit "Scan". It should start scanning that bank.

NOW, 'neat trick'...If you want to "monitor" the Trunked AND the Conventional banks, just "active" those banks and hit the Trunk button. This SHOULD scan both and when the trunked quits by not having a signal, the Conventional bank will scan. They won't scan simultaniously though (:-(But Hey, it works! LOL!

Since I've learned this trick, I plan to finish filling up the remaining banks with conventional frequencies..30-50 mcs, 150-174 mcs, 450-512 mcs, and even some 900 and 1.2 gig frequencies used by Ark-La-Tex Fire, Police, EMS, and business radios.

Now, it sure would be nice to figure out a way to 'modify' the Pro-94 to scan BOTH A & B banks, in one continous sweep. Yep, I'm "nosey", hehehehe.

There is also a lot of Federal and Military "frequencies" here as well, but I don't give those out to ANYONE! Can't be TOO careful with certain "American" Groups (White Supremist, KKK, Minutemen), nut cases and "terrorist" living in the area. We have them and they are being "monitored" by the F.B.I. (shhhhh!, LOL!)

Well, I need some "cackle-fruit" (eggs), "hog-straps" (bacon) for breakfast and another 80-cup IV of my World's Famous, "Hello World" Cajun cowboy "Sock" Kawphy (coffee to you non-Cajuns).

Respectfully,
73,

From: firekatz04
Topic: 4235 Message: 4239

Simple:

Hit manual. Enter the channel location desired, hit manual and
the scanner goes to that "slot" (preferbly empty, noted by the
frequency of 000.000). Hit PROG. Hit 131.55 (or whatever you wish to
program). Hit ENTER.

Example: hit manual - scanner stops on 12. The next slot with zero's
is 83. Hit 8-3, manual. Scanner goes to channel 83.
Hit PROG 1-3-1-.-5-5 then hit ENTER.

Good luck;
Mike

Priority channels can only be used with conventional frequencies. The scanner checks the priority channels by actually changing channels momentarily. It can't do that when it is following a trunking system because the receiver must follow the trunking system unbroken to follow a specific transmission. This is a function of all scanners.

Long and short, you can program in a priority channel but the scanner will not switch to it when you are listening to a trunking transmission.

Rick;

Are your scan banks turned on? If you are set to scan just bank 1
and it has the trunk frequencies only, and the other banks are loked
out - you won't hear them - just a thought.

yup....just be sure to set up your trunked freqs FIRST. Then you can
fill in the remaining locations in the bank with conventional freqs

Will try it.

Does that apply to all banks? This would work for me, because then I could have a bank per service/area preset.

Rick

Hmmmmmm,

I didn't know that.

Now, since I have several different agencies: Caddo 911, Bossier City, Bossier Parish and two State Police, should I program ALL their frequencies into one bank? I would think the scanner would go crazy trying to figure out which control channel to pass if two (or more) agencies transmitted at the same time.

IF I can do this, ALL of my trunked can go into one bank, LOL! If it won't work that way, Bank 1 has 25 open slots for some of the conventional frequencies (Caddo Parish 911 has 25 frequencies).

Bank 2 has Bossier City Public Safety - 7 channels. Does that mean I could program the 18 remaining channels as conventional?

Bank 3 has Bossier Parish Sheriff - 5 channels, so that's 20 more.

Banks 4 & 5 have 5 each, so that's 40 more (if this all works)

Bank 6 has all the Conventional stuff, Ham repeaters & simplex but, still has some "open" channels I have not programmed.

Bank 7 has the Conventional Low-band, VHF, and UHF Public Safety channels, but I haven't gotten @round (hehe) to programing ALL of the different area town fire, police, EMS, and ambulance services.

Later, Bank 8 will contain all of the Federal frequencies: FBI, ATF, DEA, Federal Marshals.

Bank 9 will have Military 800 mhz conventional and other Military frequencies.

Bank 10 will have the area business's I find. Sometimes listening to a plumber or an electrician can be "fun" and educational, LOL!

Respectfully,
73,

Don/KA5-LQJ

Matthew my 94 does it though. I listen to my trunked frequencies and at the same time I see the reg frequency being scanned. I can hear the trunked frequencies but also hear the 414. frequency as well. The 414. is dipatch alerting into the firehalls. I am programing son-inlaws (has the same 94)...and having a prob. So I know it can be done just not sure how to do it....thanx alot!!! Cam

Thanx Don....I work for Miss Fire....freq 1-4 are all truck and port frequencies....
1=non emergency on air
2=fires
3=first aid/accidents
4= extra channel

I havent read the next reply after yours but I believe the 414.5875 frequency is a normal frequency...The others are trunking and corresponding talkgroups. The 94 can scan Regular freq as well as trunked....at the same time. I have just one "normal" frequency to put in...it will automaticly be the priority channel...and will likley be scanning while I am trunking the others. I will let you know when I try it out. Thanx a million my friend!!!! Cam

From: ClaytonCountyNGa@aol.com
Topic: 4250 Message: 4250

Hello everybody. I have to Radio Shack Pro-94s. One of them was bought just to have a portable scanner. Then I got an excellent deal on one from Ebay. I cannot remember exactly when I got either one of them. However it has been a few years ago. Even from the first one.
Where I live the police, sheriff, and fire department aren't on the trunking system. On the other hand the big city (Atlanta) is, along with (Georgia) State Patrol. Which Georgia is on Atlanta's radio. Finally today September 11, 2007 I got it programmed on one of the scanners.

I feel sort of like a dork for not doing it sooner. However, I could not figure the programming out. I even had someone else try it. I had another Pro-94 owner explain it to me simplified. One person said they would program if for $50.00.

If you have a problem programming yours. Do not get mad with it, and give up. Just contact me and I will help you out.

Don't be so hard on yourself. We ALL have had 'difficulties' at one time or another with the 94. The manual is NOT well written...in simple, understandable terms. If you think THAT's bad, try programming the PRO-2051..manually, LOL! I wasn't impressed with ScanCat and never could find the right darn cable at Radio $haft (You have money, We have deep pockets to fill up.)

It is nice of you to offer to help somone who is confused. That's what makes this such a good group, the willingness to help out.

I'm no "rocket scientist", but I try to help where and when I can as well. I absolutely LOVE my 94 (plain). I had the same problems as you. I had not joined this group yet and so I was on-my-own. But, through perserverance, I prevailed.

"It's not bad when you fail and hit bottom, it's how HIGH you "bounce" when you do." <-- Gen. George Smith Patton

Not that it makes any difference but I'm in IT. I program large multitrunk routers all day long and the Pro-94 eludes me 99% of the time :) Not very intuitive at all.

I might have spoken too soon. I haven't gotten a power cord for this unit yet. I did not want to waste out the batteries. So I really haven't used this one as a trunking scanner.

I have a problem that I notice. I guess it is called a bank. How do you hold, or store a particular bank? Example the 32272. I also notice that I have to continuously press the SRC button. Either when I turn it one, or during the scan of banks.

Thanks for your help.

That should be an ID. Every radio have an ID and you have to program those in the PRO94 to be able to listen to this radios. If you don't program those ID's in the PRO94 you are not going to hear anything.

When you don't have the ID's for the radios that you want to listen you hit the SRC key to listen to all the radios that transmit on that system. If it is a very busy system with lots of units you are going to listen to a bunch of random transmissions depending the size and type of system. With this function you are going to be able to write down those ID's on paper and figure them out. Once you know witch ID is the department or service that you want to listen to, you program them in the PRO94 and then every time the radios with those ID's that you progammed transmit on the system you are able to follow the entire conversation because the scanner is going to switch to the correspondent frequency and that my friend is what's called Trunking.

Hi All! (;-)

I purchased a Pro-95 from one of the members here and got it tonight when I got back from the Dr's office. I live in Dr's offices, LOL!

I turned it on and it DOES pick up some of the local trunked frequencies but they have a Wisconsin alpha tag. I'm gonna take a shot at the 0wner's manual and see if I can program the Caddo Parish 911 Communications District's frequencies and ONLY the alpha tags I want to receive. That will take care of the first 25 frequencies in bank 1. The rest will be filled some with local area fire departments and police depts that uses conventional VHF and 450 UHF frequencies and with luck THEIR alpha tags as well.

I don't have a clue as to the cable I'd need to program the handheld or the software to use. Any ideas?

Just wanted to pop my head up and let y'all know I haven't died and still monitoring everything from direct current to "Light", LOL!

Respectfully,
73,
Don/KA5-LQJ

Do you have your manual????? Read from page 51-55. When you think you understand something about it read it again. Then start programming those ID's. When you have problems read them again. Then read them two more times and then post your questions.

I'm just telling you this not to be mad at you. If I got your answer I'll tell you. The thing is that this scanner is a little tricky to understand on that part. Don't just give up. How do I know????? I spend about 3 years basically not using the trunk features because of some lack of information and not being able to understand the instructions in the book. I still have a couple of things about the radio that I still don't understand so I may be able to help you on the things that I know something.

If you got the trunk system already programmed and knowing the ID's that you want to listen I would say that you have about 80% of the work done.

Good Luck

You MUST program a few freqs. into the scanner. You could try to SEARCH or maybe try the WEATHER.....it is found in the search[bottom right button]. Make sure that the banks are not LOCKED out. Good luck!!

I have had the same problem over the years, that is why I got a 97, much better radio. Put the antenna on it, and go to the weather bank. While it's looking for the right frequency, gently push the antenna from front to back If the BNC connector has come un -soldered from the board, you'll pick something up intermittently. If you are steady with a soldering iron, you can fix it by taking the radio apart and then confirming that it is a broken connection. Gently solder the joint back together.

If you know a firefighter and you know the frequency they use, stop by the engine house. Lock it on frequency and then have the key the mic. If it comes through, you know that you are close enough to the source to hear it and you do have an antenna problem.

Try the simple things first. How do you have the squelch set? All the way clockwise and you won't hear anything. All the way counter-clockwise and you should hear noise, then turn it just so the noise is gone.

Once the squelch is set, try the WX band.

From: ka5lqj
Topic: 4268 Message: 4268

Ok,

I lucked up and somehow managed to program in the 25 trunked frequencies for the Caddo Parish 911 Communications District. I also input a couple of VHF Hi-band freqencies as well and they both work together. The scanner is "open".

Now, as it trunks, it shows ALL of the Caddo 911 talk groups, some I don't want to receive (Parish dogcatcher, S'port Puumbing/Electrical/Etc. Inspectors, SPORTRAN buses, etc.

How do I go about inputing just the talk groups and ID tags I really want to listen to and lock them in. The same goes for the conventional frequencies that I'll input like 158.97 for the Waskom, TX. Police dept.?

Ya' know, SOMEBODY out there that has this all figured out for the Pro-94 & Pro-95 could write a plain and simple to understand "text manual" and post it here to the FILES area and would have the everlasting gratitude of everyone who needs this information. Once I get this all figured out, I'll do it. Now, the question is: Who's gonna beat me to it and get the "Glory!"?

From: great8jrfan
Topic: 4270 Message: 4270

Bought used Pro 94

I believe I have entered all frequencies, talk groups etc...

1. Should scanner display show" Scan ID" OR the "800" frequencies? It stays more on Scan ID but appears to bounce back and forth.

2. It seems to scan slow, especially in "Scan ID". Hyper is on. Idea?

3. Should I have entered the frequencies as E1 or E2-800?

Thanks in advance for your help.

You should see the ID number while it is scanning.

2. It seems to scan slow, especially in "Scan ID". Hyper is on. Idea?
I cannot answer that.

3. Should I have entered the frequencies as E1 or E2-800?
I think you have to put one of them for it to work properly.

1.It should display "Scan ID" if you program the ID's previously. If no ID's have been programmed you are going to hear nothing.

2.

3.You need to know the system you are programing, Motorola or Edacs. If you Use E1 or E2-800 that should be for an Edacs system. If those are not set properly you may going to have trouble scanning the system.

Kory,

First, in order to help, we would need to know what "system" you're trying to program...the city, county, or state. Most would use a Motorola system, probably a Type II. So, try to find out which system the enity uses. I am only familiar with Motorola Type II's as that's what is mostly used here in the ARK-LA-TEX area. Once you get the trunkiing frequencies programmed, you may also program "conventional" frequencies (30-50 mhz, 150-174 mhz, 406-512 mhz, and untrunked 800 mhz frequencies to fill the rest of the 50 channel bank. However, if you have more that one trunking system, say city & county or county & state trunked, each trunked system will have to be on separate banks (i.e. County - Bank 1; State - Bank 2) BUT, you can still program the conventional frequencies in both banks, after the trunked frequencies to fill that bank as well.

I just learned this from THIS Group, I don't remember who said it, but it's GREAT. The same goes for the PRO-95. ;-)

If what you're trying to monitor a Motorola system and you have it programmed for Edacs, it will never "hear a peep" and the systems are incompatable. Smart business move, but really stupid when two unlike systems are trying to cross-communicate as in a pursuit. THEN, there is APCO-25 Digital, which is anoter ball of wax, LOL! As long as cops keep trying to keep their comms "secret" from the bad guys, someone is going to figure out HOW to beat it.

There ARE ways of keeping things "secret", but they are not feasible for most folks... :-(An, there is always someone trying to figure out how to beat that system and monitor it, especially the Feds. 'Nuff said. I know too much.

Respectfully,
73,

Don/KA5-LQJ

Speaking of APCO-25.. They are about to switch to the new APCO-25 format here. It will be in the 800MHz range, and 9600bps capable. It's been an ongoing project for nearly 1 year, and supposedly within the next week they will go live. Yep, I'm really looking forward to chunking out another 500 or 600 dollars (depending on whether you pick the Bearcat/Uniden or the Radio Shack models).

I'm holding out to buy another anything until rebanding is done and Astro 25
fully rolls out.

Just like Don said, there are folks out there figuring out how to beat the
systems and monitor. Methinks I should let them do their jobs and then buy
their products as opposed to getting stuck with an extremely unusable
scanner.

Until then, it'll just be me and my beat up 94.

D.

Well,

I'm not monitarily "rich", and I've been a ham for over 25 years and a short-wave listener and scanner "jockey" since the 60's, when they had the crystal-controlled, one-channel out-board converters for your am broadcast radio (Ameco?) for vhf-low band (30-50mcs) and vhf high-band (150-170mcs).

Now, I'd LOVE to have an ICOM PRO-III and a D-Star rig, but I can't afford them...now. But, I'll have to be content to run my ICOM 706MkII-G. I'd also love to have one of those digital scanners (base and handheld) too. Oh, I COULD sell my Heathkit SB-220 amp to get some money, but occassionally, I like to make a little "noise" on the bands and that certainly helps. (:-)

The ONLY thing here that's digital, for now, is some of the Bossier Parish SO's comms. They're all drug bust related and I could care less for now. But eventually, when things "change" as they will (There is nothing so 'constant' as change, LOL!), I'll have to save my "change" until I can afford all that new gear. I don't LQ^QK at it as an 'expense', I look at it as an "investment in my future listening pleasure". Hi Hi!

It would be the same thing as a guy getting a new set of golf clubs. THEY don't mind laying out big $$$$$. (;-) Old golfers never DIE, they just lose their.....green's fees.

From: ka5lqj
Topic: 4270 Message: 4278

Hi Loyd, All,

I still have my 94 (plain) and just bought a new-to-me Pro-95. I've had 2-94's, both the "plain" model (not A or B) and the first one, I wore slap out, listening to it. I can't recall the number to times that plastic belt clip broke and it fell on the concrete, but it kept working. I replaced the belt clip with a Banker's large and long metal clip by epoxying it on.

I woke up one morning and she was "gone". New batteries didn't help. For some strange reason, the 94 just "died". I bought another one from another HAM and this one is just like the "old gal", she works.

I got the 95, because of medical problems and MY 'memory' is going and I can no longer remember some of the talk groups. The 95 solves this with the Alpha tags. I've delegated the 94 to non-trunked, conventional service and am loading all the fire and police low-band, vhf high-band and 450 uhf frequencies within a 75 mile radius. I keep it in the F-150 when I have to go to Texas, twice a week, just to listen and keep up with emergency situations (wrecks on I-20, construction along US 80 and other necessary information (Skywarn). I don't always have the Icom 706MkII-G in the F-150 for 2 meters. I do have a R$ HTX-10 that I use for local 10 ssb and fm simplex. Having the 94 along for the ride is just another "tool" I use along with the 95 and other ham gear.

I also have a Pro-26, Pro-58, Pro-2045 and a Pro-2051 and MORE to come, LOL! To say I'm just "nosey" is an understatement.

I'm not sure if this would be considered as "off topic" but has anyone USED WIN '95 to program their Pro-95? I downloaded it, but there were no "instructions" as to how to use it. I did download the Excel spreadsheet, but I'm a bit confused.

The Caddo 911 system uses 25 frequencies but has many 'subscriber's'. The talk groups are not frequency dependent so that spreadsheet doesn't work for me.

Can someone e-mail me or post it on here. I'm sure there MUST be someone else as "cornfused", LOL! Caddo 911 has TONS of talk groups, but I don't neccessarily want to listen to them ALL. So does the Louisiana State Police.

4281. Discone antenna?

Yahoo group: pro94owners
Date: 2007-09-24 15:19:32 UTC
From: Randy Patterson
Topic: 4281 Message: 4281

Hey,

I am going to buy a base antenna to connect to my pro-94 while I'm just setting in the office. I am looking to get either a Super Discone Antenna;

http://www.antennawarehouse.com/Scanner/Superdiscone.htm

or just the smaller Discone Antenna;

http://www.antennawarehouse.com/Scanner/Discone.htm

The advantage of the smaller 32" tall antenna is that I can place it in the attic and not use a pole. Does anyone have any experience with either antenna or would know if there would be much of an advantage purchasing the larger and slightly more expensive antenna.

Thanks,
Randy

4282. Re: Discone antenna?

Yahoo group: pro94owners

From: Donald Saunders
Topic: 4281 Message: 4282

Hi Randy, All,

It depends on whither you're going to try and transmit off the antenna as well, if you're a ham radio operator. Discone's while LQ^QKing like they might do the job really don't.

Which bands are you mainly going to listen too? Low-band (25-50 mhz), Vhf Hi-band (150-174 mhz), Uhf Low (450-512 mhz) or Uhf Hi (800-900 mhz)? If you're not going to listen to Low-band, then a good "compromise" antenna is a quarter-wave, Vhf Hi-band antenna. It's simple to make using a SO-239 socket some wire the inside size of the "hot" SO-239 "pin", some soldering or crimp lugs and some 4-440 bolts, star washers and nuts. Cut the Center-pin wire 19.5" long and solder it to the center-pin of the SO-239. On the four mounting holes, cut some stiff wire, 20.5" long (Driven ele. + 5%). Solder each wire with a lug or crimp lug on both ends of the wire. Solder a lug on the driven (top) of the groundplane. Bend the 'radials' down at the lugs at a 45¨¬ angle. This will match some RG-58u or RG-8X (small cable) at 50¥Ø(ohms). Now, take some string that will pass through the eyelet of the soldering lug, tack a nail in the rafter and hang it up. This should be good for reception from 2 meters up thru 900 mhz, depending on the height of your roof...at least a good 25 to 30 miles away.

DO NOT buy cheap coax or 75¥Ø cable quad shield. You will have serious LOS (Loss of Signal) if you do to the mis-match).

I hope this helps. It's an inexpensive (Less than 10 bucks) way to monitor, locally. Now, if you're wanting to receive signals OVER that distance, you need an outside antenna, as HIGH as you can put it and make sure the mast and antenna are very well "grounded" to Earth. If the antenna is on a tall building, especially. Check with the building maintenance personel. They SHOULD know where an 'earth ground' is. Lightning is NO fun to play with, LOL!

Now, if you're NOT in a "building mood", there are plenty of antenna websites that are available. Each will have some claims of "bang-up" reception claims. But, it's like fishing lures.... they catch more "fishermen" than fish, LOL! LOTS of antenna "research" is the key and no cheap coax really helps. If I could afford RM-600 coax or say 1/2" hardline, I'd go that route, LOL!

I've been doing "antennas" for ALL bands from VLF (10khz-30khz) up to 1.2 gigs since 1958. I'm still an antenna "freak", LOL!

Ohh, if you want to know about antennas, L.B. Cebik, W4-RNL, is the expert. His books are extremely 'technical', but if you're really interested and want to LEARN, they are great. No, I don't get anything from plugging his books. L.B. just happens to be a friend and a MASTER Guru when it comes to skywires, etc. Tell him I sent you, LOL!

Hey Don,

Thanks for all the info. I'm just a scanner listener and so mainly listen to the bands in the 150-900mhz range you listed. I just made a jpole antenna optimized to around 470mhz and it seems to work much better than the rubber duck that came with my pro94. But I am looking to build or buy an antenna for the attic or outside pole where I can bet more height.

I would be very interested in building the antenna you have described here! Just wondering if you had a link that contained a picture of the type of antenna you have described?

I was interested also in the coax comment. I haven't been able to find a reference to get a price on RM-600. On my jpole I used RG58A/U. Do you consider that to be 'cheap' coax?

Hopefully you won't mind me asking one more question!! :-) Regarding jpole antennas, comparing the type built with 300ohm twin lead and those built with 1/2 copper tubing. Which type to you think would give the better performance, assuming both are built well?

Thanks so much for you time!
Randy

Topic: 4281 Message: 4284

Hi Randy, All,

Well, here's a site to build a 2 meter 146mhz to 150 mhz, which SHOULD be good enough to work within a 40 mile diameter.

http://www.hamuniverse.com/2metergp.html

RM-600 or even RM-400 is expensive. If there is a group of you in a local area, it's wiser to "pool" your funds, get a 5,000' roll or 1,000' roll and divy it out. I'm afraid to post any of the commercial coax distributors here as that may be a "no-no".

RG-58, while good for short spans from 1.8 khz to about 20 mhz is ok for low-power...Less than 300 watts. Above that the loss of vertical standing wave ratio (Yes, you have SWR on receivers at well) become less and less.

Now, if you're talking about talking 300 ohm, flat, twin-lead an making an antenna of it, I'd use copper, just for the strength. Copper isn't cheap, so...

I never mind someone asking me a questions about "radio", that's how I learned and was "Elmered" into Ham radio.

I'm kinda tired. I've been up since 3 am and it's 9:30 pm now. I'll be glad to answer questions in the morning, AFTER I've had a cup of my World-Famous, Cajun Cowboy "Sock" Kawphy, LOL!

Blessings,
73,

Don/KA5-LQJ

Both will perform the same on the frequency range listed for the smaller antenna. The larger one will be rated to lower frequencies than the smaller one and thus will have more useable bandwidth.

However...

Discones are great for people who want to receive a large range of frequencies with a single antenna. A discone antenna does a good job of receiving all frequencies in its range equally poorly, if that makes sense. More tuned antennas receive their tuned frequencies very well at the expense of poor performance at other frequencies. The 'best' antenna depends on what your listening habbits are. For example, if you only want to hear 800 MHz trunked systems you will give up a huge amount of reception by using the discone vs a smaller tuned antenna. But if you like to hear many other frequencies the tuned antenna will be nearly deaf on those.

As for the outdoor vs attic question, the outdoor antenna will always receive better vs. one in the attic. That does not mean it is alway better, though. You have to account for more loss due to longer coax, intermod from picking up nearby strong signals better, and of course the occasional lightening which will ruin your day in a hurry.

Reading back over what I just wrote I realize it is probably not the answer you were looking for. So here is my answer in a shortened form:

The larger and costlier discone will be better. Maybe.

4286. brand new here, question about antennas.

Topic: 4286 Message: 4286

Hi people, first time on this forum...
Actually, I just bought the scanner on ebay, hasn't even come yet.
I have a very very newb question about antennas.
I know that to broadcast on a frequency, the closer the size of the antenna is to the size of the frequency, the better.
Am I wrong, or if your only receiving, the bigger the antenna the better, regardless of the frequency?

Thanks a lot, now that I have a scanner, (pro 94 (not sure if its an A, B, or just plain yet)) I will probably be posting more and more here.

Dovy6

4287. RE: [pro94owners] Re: Newbie Here...Some Questions Please

I've done some research on rebanding, and if you're concerned about your new scanner being unusable after rebanding, you might look into the new GRE scanners coming out later this month...my understanding is they will be re-programmable into the future with upgrades downloadable from GRE via the internet. I'm already saving my pennies for one! Cheers!

Hi Dovey,

"Welcome" to the World of Scanning. The scanner has nothing to do with the antenna model ("plain", "A", or "B"), it's the frequency that you wish to monitor. Now, handhelds are more sensitive to "noise" and "intermod" when used as a "base" radio. This is especially true in large cities where commercial two-way radio shops have both pager transmitters or "community repeaters" (ie. rental radio transcievers working off one transmitter). For "personal" monitoring (on one's belt) most of the BNC 'whip' models will work from 25 mhz up through 800 mhz, although you're right, the nearer the frequency the length is the better. A 3" stubby "duck" won't hear most stuff on low-band (30-50 mhz), UNLESS you're under the transmitter, LOL! An, visa-versa, a loaded 18" 'duck' won't pick up 800 mhz stuff very well. OH, DON'T buy the 'duck' for NASCAR reception, unless you're at the track. You'll never hear the race from Homestead, FL, living in Texas, LOL!

I've had a couple of Pro-94's (plain). I wore one out listening to it and occassionally dropping it off my belt. That plastic clip will break also, if you have it on and bend over or down. My "new" one has worked like a champ since I got it. Now that I have a Pro-95, the 94 will be relagated to non-trunked service and have the "A" banks filled with conventional low-band FM (30-50 mcs), 6 meter ham repeater frequencies and 52.525 mcs simplex (National calling FM frequency), 2 meter FM repeaters and the 146.40-146.57 & 147.40-147.57 mcs simplex frequencies, Hi-band FM (150-175 mcs), and other conventional frequencies up through and including 1.3 gigs.

Now, if you DON'T live in a crowded area, you could build an antenna for the scanner out of coathanger wires and an SO-239 UHF Female socket. There are examples of this antenna on the Web....Google is your friend, LOL! But, be sure you use 50 ohm coax to hook the antenna to the scanner and the best quality you can find. It DOES make a difference, reception and interference wise.

I don't claim to know it ALL, but I got started in 1958 when I was 12 years old and I'll be 61 on Monday. Seen a lot, done a lot, and experienced a lot. I love to help others out. Electronics and radio are still fasinating to me, even after all these years, LOL!

Blessings,
Respectfully submitted,
73,

Hey,

The Pro-97 isn't digital, so if you want to hear the APCO 25 Digital, rebanded, systems you will need the Pro-96. That's really and only one that will meet all your stated requirements. Unless there is a newly release system that I am not aware of.

I agree about not buying cheap co-ax (though inexpensive does not always mean cheap, and cheap does not always mean inexpensive.)

However, I do not agree about the loss from the 75 ohm impedance mismatch. A receiving antenna will have a perfect 50 ohm source impedance only on its very tiny resonant frequency bandwidth(s.) When receiving outside of the 50 ohm range the cable mismatch will cause negligible loss in comparison to the antenna mismatch. When inside the perfect 50 ohm range the SWR will only be 1.5:1 and also cause negligible loss. RG-6 will work very well even though the scanner has a 50 ohm input impedance.

Larger diameter antenna elements will provide a larger range of resonant frequencies. So a J-pole made from 1/2" copper pipe will be better than one made from twin-lead, and one made from 3/4" copper pipe will be better than one made from 1/2" etc. Unfortunately the high cost of copper puts a limit on the size of pipe that can be used for an 'inexpensive' antenna very quickly.

I am certainty no antenna expert but I thought that might be the case. I have built two jpole antennas, one turned to 151mhz and the other to about 450mhz using twin lead and they work much better that the default antenna that came with the Pro-94. I plan to upgrade to a Pro-96 and will probably just buy a good Discone for it to use at home.

But my other antenna problem I have is this. I am apart of two different local volunteer fire departments. I live on the edge of the county and far enough away from the repeater used to page county fire departments that I have trouble understanding the pages. I have an amplified base for the pager and that doesn't help. The repeater transmit frequency is 151.415mhz and I now use the 151mhz jpole antenna I built for the scanner on it and it was a big improvement. But I really need something mounted on the side of the house that I can get up higher. In your opinion, do you think a jpole made of 1/2" copper tuned to 151mhz would work better than the 2 meter ground plane antenna tuned to the same frequency that Don referred to at this link?

http://www.hamuniverse.com/2metergp.html

Sorry to the list if this has gotten a little off topic.

Thanks,
Randy Patterson

I got mine at a corporately owned pawn shop that I often shop at. Its antenna was NFG and thus, the scanner didn't work. I noticed the antenna flaw and offered them $25 and they were glad to have "ripped" me off. They should check things like that.

That said, I'm no antenna expert. I've never found the coat hanger antenna much good for anything except powerful local transmitters.

Hi Dovey, All,

Did you get ripped off? You bought it on E-bay, correct? If so, you paid what it took to get it. If it works properly, then NO, you weren't ripped off. You paid more than I would have, but that's just me. <wink>

New Yawk is a LARGE state. Hellary & "Billy Bob" live in New Yawk. If you live in New York City, a short rubber duck antenna with a BNC connector (what's on top) would suffice. If you live in Albany, Buffalo, or Cape Vincent, you may need an outside antenna, preferably a "ground plane" (18" for 150-174 mhz, 6" for 450-512 mhz and/or 3" for 800 mhz trunked) vertical quarter-wave. The drooping radials are bend downward at a 45 degree angle to match the 50 ohm coax better and are 5% LONGER that the vertical, quarter-wave.

Depending on where you put the antenna (I'd build the 1/4 wave 150-174 mhz one for an all-@round antenna) you can use a solid, insulated (strip off just enough to solder it to the SO-239) copper wire, same for the radials. Take a pair of needle-nosed pliars and put a small "loop" in the ends & the top to keep eyes from being poked out, accidentially and you can use a piece of string or heavy thread to hold it to a cup hook on the ridge beam (where the rafters come together and are nailed to a 2x10).

The antenna end of the coax should have a matching PL-259 UHF connector with the proper reducer and the 'business' end of the coax should have a male BNC connector.

NOW, all you need to do is "PROGRAM" the 94, hit SRC and away you go! LOL! If you need help with that, there is plenty of help for that. If you're looking for freqencies, a good place to look is: www.radioreference.com. I use it extensively and the forums as well, so I've paid to be a member with all the privilidges. To me, it's worth the money.

I hope that I've been some help, not only to you, but to others who might have questions. I certainly am no 'Steven Hawking' and I don't know ALL the answers, but I love being helpful where and when I can. Just part of being an ol', long-time electronics tech, Short-wave listener, Commercial 2-way tech, ham radio operator and scanner "phreak", LOL!

Respectfully,
73,

Don/KA5LQJ

Hi Loyd, All,

CONGRATS on getting the scanner, inexpensively, LOL! Yep, the R$
antenna that comes with the Pro-94 is pretty much a POS antenna.

I've bought a bunch of better "duckies" from other hams and have
even had some sellers send the better duckie when I bought the
scanner from them.

Being a long-time electronics/radio nut and antenna experimenter,
I "roll-my-own" when it comes to base or mobile antennas. It's
worked out well since 1958, and I'm STILL at it. I just build
them and try them out. If they don't work to my expectations,
then I try something else. I just know it won't work THAT way,
hehe. Over the years, I've collected a lot of old "Editor &
Engineer's Handbooks" and old ARRL manuals to give me a "library"
to work from. Some have names no one has ever heard of, but then
they weren't around in 1920 either and neither was I.

Well, I need some lunch.

Blessings,
73,

Don/KA5LQJ

hey. i did get ripped off, kinda, then...
oh well, what could you do.
I live in NYC, and I'm getting perty good reception. I just had heard that the antenna that came with the pro stinks, and I was wondering if I should buy a diff. one.

Lucky for me living in New Yawk, like you say :), is that I have all the frequencies i need mapped out. So many people living here, someone has found out the freq. and posted it online somewhere.

I still have my original question; I know that for a 2 meter band, the closer the size of the wire on the antenna is to 2 meters, the better it transmits. My question is is, it the same for receiving? I would think more surface area means better reception. Am I completely off?

4307. Re: [pro94owners] Re: brand new here, question about antennas.

The antenna that the pro 94 comes from the factory with is pretty good for conventional scanning, but sucks for 800mhz systems...I purchased a new rubber duck antenna that's supposed to be tuned for 800 mhz, and it works well for mobile use, but when I have the scanner home I plug it into a discone antenna that I have about twenty feet in the air on my tower, and I get excellent multiband coverage....Check the frequency ranges of the antennas you're looking at...but at the bare minimum, I would upgrade the antenna it came with to something that will follow 800mhz trunked systems better... Good-Luck

To a point. It all has to do with a complex relationship between currents and voltages in the antenna wire. More surface area will help reduce resistive losses. The more critical point is antenna resonance, which is what you are talking about with the length of your 2-meter antenna. Resonant antennas are some fraction or multiple of the actual wavelength involved - 1/4 wavelength, 5/8, 3/4, etc. A 1/2 wave dipole is the "classic" easy to build antenna because it naturally impedance matches very closely to 50 ohm coax and reciever inputs. Horizontally with 2 1/4 wave elements, you have a 1/2 wave dipole. Vertically with a 1/4 wave "driven element" and three or four 1/4 + 5% radials and you have a "ground plane vertical". This gives you essentially a half-sphere radiation/reception pattern over earth. You want vertical here, as that is the polarization of choice for the land mobile services. Optimal for vertical operation seems to be the so-called 5/8 wave antenna, which is actually a 5/8 driven element with some 1/4 wave radials. This antenna gives you a sort-of "squashed" pattern more concentrated on the horizon. It is more difficult to match to 50 ohms, but this is not so critical in receiving as it is in transmitting. Just about any old chunk of wire will function as a receive antenna, but an antenna that is 1/4 wave at the desired frequency will perform better than a "rubber ducky" and is easy to fabricate. More surface area (fatter wire) will make it somewhat more broadbanded, but you probably wouldn't notice in recieve only service. Going longer than 5/8 will begin to produce strange lobes (peaks and nulls) in the antenna pattern that won't help much in this type of service - that complex relationship between currents and voltages along the antenna wire that I mentioned.

The formula for a 1/4 wavelength antenna element is L=234/F, where F is the frequency in Megahertz and L is the length in feet. Note that this is not the same as the free-space wavelength, it takes into account a phenomena called "end effect" of the antenna element. A real-worl antenna can be either longer or shorter than the formula says depending on how it is constructed, whether or not it is loaded, or is designed for multiband operation.

There's a whole science to antennas. You can spend hours Googleing it and reading up if you want to.

Hope this helps.

Yep. But this one had visable damage to the base at the connection. It was way beyond POS at that point. It was something that would have been noticed in any of the mom & pop shops I frequent.

> Being a long-time electronics/radio nut and antenna experimenter,

Please don't think I'm slagging improvised antennas. Just coat hangers. I've tossed a couple of copper wired antennas together myself and they worked fine for the purpose and the moment (especially in directional situations). I've just never had any luck with coat hangers.

Then again, I avoid reference material from Hams due to their love of obtuse language and higher math and tend to gravitate towards varied military manuals as they're written for (ahem . . .) let's just say the general public.

Naw. The wife and I are almost professional shoppers and she worked in a pawn shop for quite some time. She does yard sales and estate sales, while I do pawn shops and sweaty guys working out of their cars. I'm a vicious shopper when it comes to corporately owned pawn shops. Most of the people there don't know much about their jobs and seem not to care much either. The mom and pop places cut me real deals so there's no need for me to be quite so aggressive with them.

I like my 94 so much that I'd give a bill for a nice one if I had to.

> that the antenna that came with the pro stinks, and I was wondering if
> I should buy a diff. one.

Absolutely. Most everything I do is 800mhz trunked stuff so the stock antenna (even if it wasn't broken) was next to useless for me anyway.

Off the topic, but has anyone here had experience with the Alinco scanners and if so, what kind?

D.

True. It's becoming a common practice to use good quad-shield satellite TV
coax in RX only applications. Impedance is very non-critical in RX
applications.

Buy the Pro 97 from Radio Shack.? It can do all of that plus you can download all of it from Radio Reference.com and never have to program anything.? I have had one for 4 years and never had a problem with programming, batteries or anything else.

From: Eric Budinger
Topic: 4319 Message: 4321

in a way your kinda correct.

A repeater takes a low power signal and amplifies it. Receives on 1 freq and transmits on another freq.

As for Hatzolah I dont see a repeater pair for them listed on Radio Refernce so I am guessing they are SIMPLEX only. Meaning you will hear the dispatch cause they are transmitting a much more powerful signal then the mobiles or portables used by others.

the PL Tone is used so that a frequency can be used by multiple agencies without interference so to speak.

I have a link somewhere that I found explaining alot of this. Hope this helps a little bit.

Eric

Thanks a lot.
I didnt realize that a repeater rebroadcasts on a diff signal.
What your saying about Simplex, I was wondering, if only the
dispatcher has such a powerful radio, how do they hear the responses?
And if the responses are strong enough for the dispatcher to pick them
up, how come I cant hear them?

From: Todd gams
Topic: 4319 Message: 4323

About the input frequency of a repeater...(versus the outmut that you would normally tune to) you should note that a repeater station might have an antenna at a great height and be able to "listen" alot better than you, or the radios normally talking to the repeater station. You might be able to listen to the input, but that would indicate the person transmitting on the input frequency is close enough for the radio wave he is putting out to reach your antenna on a direct line of sight path...the repeater system is there to extend the range of the radios transmitting on the repeater's input frequency. Hope this helps.

4324. PRO-94 Charging Problem

Yahoo group: pro94owners
Date: 2007-10-17 14:28:05 UTC
From: daryl.hageman
Topic: 4324 Message: 4324

The problem that I am having is that when I attempt to charge the NI-CD batteries within the PRO-94, they will not charge and when I attempt to connect the AC power cable it immediately indicates BattLo...

I have checked the AC adapter and the voltage is normal, but as soon as it is plugged into the PRO-94, the scanner indicates the BattLo, when it is unplugged the batteries allow the device to work...

Any ideas, anyone???

4325. Re: [pro94owners] PRO-94 Charging Problem

Topic: 4324 Message: 4325

Did you check the switch inside the battery compartment???? There's a switch that you have to set for alkaline or Ni-CD batt to be able to charge them with the AC adapter.

Good Luck

The AC adapter connector is either not making contact or you have the polarity reversed (a blocking diode prevents reverse polarity damage and causes this symptom.) Make sure your connector is center negative and is the correct size. If you still have problems use a small amount of contact cleaner and insert the connector several times. It is also possible the connector on the scanner is damaged, but this isn't likely since it still works on batteries.

Hi guys,

I need some help. I went through a good many posts and didn't see what I need. Here's my story: I got a Pro-94 a few months ago. It's been a great little scanner. I have been scanning the police (800Mhz) since, but can never seem to hear my police division. I need help programming this thing. The manual doesn't always make sense to me.

I live in Charlotte, NC. I am trying to scan the CMPD/CFD/Medic frequencies.

System Name: Charlotte / Mecklenburg County
Location: Charlotte, NC
County: Mecklenburg
System Type: Motorola Type II SmartZone
System Voice: Analog
Sysid: 0F18

The page on RadioReference.com lists the Police Division Talk Groups, but how do I enter talk groups and still hear conversation...or am I trying to do something I can't do? What am I doing wrong? (That's a LOADED question!)

Anna-Catherine Sendgikoski

Topic: 4327 Message: 4328

You have the system already programmed into the scanner and is trunking???

if the above is true when the scanner is trunking press the SRC key. You should be able to listen to every ID using the system. Make sure you have your pencil and paper ready because you may have to take notes of every ID in the system and figure wich ID's are the ones that you want to listen and for wich particular agency or service they are. Depending on how big is the system you may have to take several notes and spend some time listening and taking notes to figure them out. The information on the Radiorefence.com may not be 100% complete. At least that was my case in my area.

Hope this help

Hi guys,

I need some help. I went through a good many posts and didn't see what I need. Here's my story: I got a Pro-94 a few months ago. It's been a great little scanner. I have been scanning the police (800Mhz) since, but can never seem to hear my police division. I need help programming this thing. The manual doesn't always make sense to me.

I live in Charlotte, NC. I am trying to scan the CMPD/CFD/Medic frequencies.

System Name: Charlotte / Mecklenburg County
Location: Charlotte, NC
County: Mecklenburg
System Type: Motorola Type II SmartZone
System Voice: Analog
Sysid: 0F18

The page on RadioReference.com lists the Police Division Talk Groups, but how do I enter talk groups and still hear conversation...or am I trying to do something I can't do? What am I doing wrong? (That's a LOADED question!)

You may want to try this link I found it very useful to me.
http://myweb.cableone.net/marksscanners/94AB/94AB.html
Hope this well help as well.

Make sure you have your pencil and paper ready because you may have
to take notes of every ID in the system and figure wich ID's are the
ones that you want to listen and for wich particular agency or
service they are. Depending on how big is the system you may have to
take several notes and spend some time listening and taking notes to
figure them out. The information on the Radiorefence.com may not be
100% complete. At least that was my case in my area.

I do have the frequencies programmed, I did get them from RadioReference.com. The talk group list came to me from a dispatcher friend. He knows BUNK about scanners though. I'll hit that SRC key to complete my task. Thanks so much, you're awesome!

Anna, A trunked system has two things, frequencies and talkgroups. you have to program in the frequencies and then go to trunking and program in the talkgroups. You are probably hearing whatever happens to be on the frequencies because you are not trunking. It's much easier on a Pro 97 because you can buy a download cord down load everything from Radio Reference and it will install it for you.

From: great8jrfan
Topic: 4332 Message: 4332

Does anyone know if it is possible to replace the lights in a scanner?
The ones in mine are really dim compared to another.

If yes, how would it be done? Can I do it myself without much problem?

Thanks

Yes, it is possible. You can do it yourself if you are skilled at precision soldering and comfortable working with suface mount components. Ideally, you want an ESD-safe workstation with a temperature controlled soldering iron (preferably two), but it's been done with less. The lights are surface-mount LEDs - very small and not all that easy to get to. I replaced mine with green ones several years ago, but I don't recall the relative difficulty. The good news is that technology advances since the release of the Pro-94 have produced brighter LEDs than the originals, in the same form factor. It's a buyer's market right now, cheap Chinese LEDs in various form factors are plentiful on e-Pay.

Speaking of the scanner light. I thought someone said there is away to make the light remain on while the scanner is on naturally. Is that possible? If so what do you have to do?

It's fairly easy if you are comfortable soldering SMT components. Disassemble the scanner and locate Q201 on the logic board. With the CPU side facing you (display side facing away) and the display on top find the MPU - it's covered in a black square of epoxy to prevent tampering. About 3/4" up and to the left you will find Q201. Simply remove it and then use a short length of small wire to short the pads where the collector and emitter were located. You can also leave it in place and just short the pins. This will permanently turn the LEDs on rather than having the MPU switch them on. Be aware the LEDs draw almost 50 mA when on so your battery life will be considerably shorter.

You'll definitely want to get the service manual from the files section of the group before taking anything apart. If you aren't familiar with SOT-23 footprints have a look here for the transistor datasheet:

http://www.alldatasheet.com/view.jsp?Searchword=2SC1623-L6

Press the key-lock while turning the scanner on. Display should read Autolit for a few seconds. From now on every time the squelch is open the display light is going to turn on. Repeat the procedure to turn this feature off.

Topic: 4338 Message: 4339

Well I quickly figured it out. For some reason or another one of my frequencies was missing and apparently that causes it not to scan Talk Group ID's because once I put it back in, it all came back. Sorry folks.

It requires the 'B' version firmware or later. The original PRO-94 does not have this feature.

4348. WIRED Display? Yes on the D206 Diode...YES INDEED!

Yahoo group: pro94owners
Date: 2007-12-01 04:40:03 UTC
From: indigotunnel
Topic: 4348 Message: 4348

Although it's beenpublished on here in the past, if you get the curious "WIRED" in your display (PRO-94's) it is likely Diode D206 (I say likely as I am not sure of any other reasons why "WIRED" may show up in the display...)... BUT, I had a PRO-94 just laying around with "WIRED" in the display every time after power on, so I ripped out diode D206 (took, say, 9-12 minutes total time to disassemble, rip, and assemble).....and she works like a charm (although bear in mind that it is said it would no longer be computer programmable - or was that cloneable??? In any case it appears it renders the PC/IF jack unuseable...but who cares??? I'll just face program this bit** when needed.....Good luck to all!

I have had my Pro-94 for almost a year now and I have finally started to really use it. I was excited when I first got it but the instructional booklet was confusing and I was not picking up much with it so I left it alone until a few weeks ago.

I am learning the basics of searching frequencies and scanning channels and hopefully soon I will have recored enough to start trunking!

I am very interested in monitoring the space station broadcasts. I live in Northeast Ohio in an urban area so I am not sure if this is possible. I already bought a 800 Mhz "rubber duck" antenna- is there another kind of antenna(external mabye?) that would be better for picking up signals from space? Thanks a lot fellas.

Hi Dale, All,

The Id10T engineer that designed all the belt clips for the R$ scanners should be drawn and quartered, LOL! They take no stress to break them. I got tired of ordering several at a time from R$, so, one day I was in an office supply place and they had a "Banker's Clip". It's flat steel about a 1/2" to 3/4" wide steel bent in a very tight "U" shape. They're used to hold large amounts of papers (mortgages or loans?) together. The long end was extremely flat.

Being carful, as the last one that broke off, broke out the two screw holes as well. I "Super Glued" the Banker's Clip to the back and let it "set" for 24 hours. It's easier to get into the top of my pants or pockets and doesn't come out and cause the radio to fall on the ground.

To bad R$ can't sell a custome-made, leather pouch, like Motorola, Standard, Kenwood, etc make for their "talkies".

I recently bought a Pro-95 and have delegated the Pro-94 to non-trunked low-band (30-50 mhz), 6 meter FM, 2 meter FM, vhf hi-band (150-174 mhz), uhf (406-512 mhz), 70 cm FM, 33 cm, FM & 23 meter FM.

;-)

I'm not trying to be a jerk, but what the heck are you guys doing to break these things? I'm not a light person (240 lbs) and have landed on my Pro-94 many times while it was attached to my belt. It also gets slammed into things such as doorways and cabinets on a regular basis when I'm wearing it. More than a few times it has been dropped and landed on the back side. So far the radio has many gouges and scratches but never a broken belt clip. Are some perhaps made of a stiffer and more brittle plastic compound?

Not trying to be a jerk either...
But anyone that hasn't broken one of these belt clips already, I'd guess doesn't monitor 24/7 or travel with it on their belt all the time. ;-) (Or has just been realllly lucky or overly careful) If you wear it, it will eventually snap. I broke another one today. Usually it's forgetting to dismount it before climbing into the car seat. "Snap!" Today it just snapped while trying to slide it across the belt. "Crack!" This is like the 6th one in two years. Maybe it's the location where we're hanging them. Mine are carried on my left flank, four inches back from center. Somebody make a metal replacement please...

Topic: 4345 Message: 4356

I am not the brightest bulb in the bunch. I have been giving this some thought. I do not even know if it is possible. Either for the belt "clip" or even for your vehicle.

Is there anyway to attach that same exact hook that is on the microphones that were are listening too? You know the microphones have that circle thing on the back. Then there is that "u" shaped thing that holds the microphone. I noticed one time that a cop had her radio in a leather case. The leather case had that or something similar on it. Although there was some kind of locking mechanize on it. You have to turn the radio a 1/4 of a turn then it would release. I never seen if it was on the leather case or the actual radio.

Personally I do not know how you use your Pro-94. I typically just mine as a car unit. It rides in the cup holder. Which is FINE when just I am in the car. But with a passenger it tends to get in the way. I have a second one that I could use your an actual portable unit.

Yes, it is similar. The button is not completely circular, having a "flat side". Rotating the radio so the flat is vertical alows the user to lift it up out of the holder. Usually seen as part of a bulky leather cases, I have seen versions that clip to the back of a radio. Usually this is a proprietary design created by the manufacturer of the radio. With some ingenuity, it should be possible to attach one to the scanner. Easier, though, would be to find a leather swivel case and matching belt clip that is a close fit to the 94. As I mentioned, they are usually rather bulky - and expensive, as everything in the commercial radio market is. Still, they can often be found surplus at hamfests, auctions, and internet sites at reasonable prices.

Another thing to consider is just what you are attaching the belt clip to. The back of the 94 is plastic. The backside of commercial portable transcievers is most often some decently thick metal, as it provides heatsinking for the transmitter PA stages. If you affix a good, sturdy belt clip to the back of your scanner, it probably won't break. What will break instead is the plastic back of the radio. The bottom line probably is that if you want to carry the scanner on a belt clip but are having this much of a problem with belt clip breakage, a good leather case is probably the best solution. I bought the RadShack case for my 94 when I got it, and it was the best investment I made. FWIW, I haven't had any problems with the clip on my PRO-97. It seems to be a fairly robust design, but usually I don't carry it on my belt - I clip it onto the pocket of my jeans.

Mine travels in a Maxpedition carrier. It is adjustable to just about any
HT size and shape and takes quit a bit of abuse.

http://www.maxpedition.com/store/pc/viewPrd.asp?idcategory=8&idproduct=179

(In fact, looks like they have my beloved selling their gear right now!)

Sadly, it cost more than my 94. But most of you know how cheap that was.

> pick up this frequency? Thanks for the advice.

I meant to reply to your earlier question on the same subject but never did. My apologies, I just got distracted.

To directly answer your question about the antenna:

The stock antenna is all you absolutely need for reception but you will have much better results with a more appropriate antenna. What you really want is a circularly polarized antenna with most of the gain pointing both up and to the high horizons. An excellent antenna for this purpose is the 'turnstile' or 'eggbeater' antenna. You can either make one yourself with plans from the Internet or purchase one commercially.

However, the Pro-94 isn't the best choice for receiving the ISS. For one, the scanner doesn't receive most of the frequencies the ISS transmits on. The second reason is that the Pro-94 does not have a true VFO, instead it has fixed frequency steps. The transmitter will always be moving towards or away from you and thus you will need to adjust the receiving frequency due to Doppler shift. A VFO can do this easily but with the fixed channel spacing on the scanner you'll lose significant reception when the needed frequency is between the frequency steps.

This isn't to say it can't be done on the frequencies the Pro-94 can receive from the ISS, only that it isn't the best setup. An excellent place to look for beginning information is http://www.amsat.org which will explain things in much greater detail.

Check out:

Hearsat.org

I have hears ISS with stock antenna on scanners and Ham 2 meter HT when the Amateur Radio (Ham) station was active and the ISS right overhead (very ideal conditions). Used too be easy too hear the APRS digital beacon but I understand it is off at the moment....

But I understand they do have occasional comms with schools from time too time with the Ham gear...

Hey thanks a lot guys! I really appreciate all the input. I'll probably get an eggbeater antenna to help out, but a true HAM radio might be in my foreseeable future The more I learn about radio waves and frequencies, they more I realize that my 94 is more useful for ceratin things (weather/emergency/local radio comm.), and that HAM would be better for shortwave/space.

What about aircraft? I know thee is a specific band set aside and that is is pre-programmed on my scanner, but I never seems to pick anything up. Would a different antenna help with this too?

If satellites and the space station are something you are interested in you'll probably want to get a wide band all-mode receiver. A few such things can be found at:

http://www.universal-radio.com/catalog/widerxvr.html

Don't panic about the prices, other models can be bought used for a lot less. Many of the HF/VHF/UHF multiband amateur radios will do the same thing but have limited frequency ranges on VHF and UHF. Specifically the 225-410 MHz range will be missing.

>
> What about aircraft? I know thee is a specific band set aside and that is is

> different antenna help with this too?

Transmissions on the air band are very brief, so if you are using the service scan to go through the entire band you are likely missing any transmissions you could have received. Try finding a frequency list for airports near you (as well as national air frequencies) and program the frequencies of interest. You'll have much better luck scanning a few frequencies than the entire band.

An outdoor antenna at a decent height can receive air traffic from huge distances due to the altitude of the planes. It will also help receive the tower transmissions from nearby airports so you can hear both sides of a conversation. If you are interested in aircraft communications you might also want to look into ACARS.

You use that port to write the memory. You can not read the radio, only write to it. Scan Cat Lite software will do it.

You buy a cable, you buy some software, you go to Radioreference.com, down load the frequencies you want and program your scanner.

Topic: 4366 Message: 4370

The PC/IF plug is used to interface the scanner with a personal computer...you can only program the scanner with the port, you can't read what's already programmed on the scanner with it...as previously mentioned. You would have to use a software program to use this feature. I used Scancat to do it, and it worked pretty good, but when I did it it caused my backlight not to work anymore...how this happened, I haven't a clue, but by resetting the scanner, it came back to factory specs....you will have to get a special cable with either a serial port or USB adapter....sold at radioshack, and fiddle with it a little to get the computer and scanner to "talk" to eachother, but once you get it set up, it would be a pretty neat feature to have...no matter what happens to your scanner, or what freq's you delete or lockout, you can bring the scanner back to where you had it by downloading the scanner again...sortof like a back-up. There is alot of info at scancat's website about what
you need to interface with the scanner, and how to puirchase their software...good-luck!

Would you be willing to try 'talking' to the 94 via a terminal program? The Pro-94 is a cousin of the Pro-2052. The Pro-2052's command/response set is well documented. Perhaps the 94 is similar. I do not have a B version so I have not been able to try this myself.

Radio Shack has the manual online at:

http://www.radioshack.com/graphics/uc/rsk/Support/ProductManuals/2000432_PM_EN.pdf

The related information starts on page 47. Another good reference is at:

http://www.freqofnature.com/software/protocols.html

Note that not all of the commands listed there are available on the Pro-2052.

Here's a site that might be able to help you.

http://groups.yahoo.com/group/ScanControl/?yguid=277403842

This is the group for "Scancontrol" they might be able to help.

http://home.comcast.net/~jlebr549/marko.htm

This program controls the 2052. You might be able to use it for your 94B.

Good luck.

4382. Owners Manual

Yahoo group: pro94owners
Date: 2008-01-07 06:48:48 UTC
From: schwing_rick
Topic: 4382 Message: 4382

I was searching through a closet in my house and found a PRO 94 scanner.I put new batteries in it,and it seems to work. At least it will turn on and off and the display seems to work. My question. Does anyone know where I can purchase an owners manual or perhaps find one online?Thanks in advance for any help.

1) radioshacks online site has manuals for many of its scanners.
2) check radioreference.com... go too the "wiki reference part" it has tons of info on scanning and full pages devoted too info on all the radioshack "pro" radios. I was just there and looking at some stuff for the pro 94.
3) the January 2008 edition of "Popular Communications" has pages 26-29 devoted too programming the Pro 94.

73 + Good Luck...

Do you happen to have a (image scanner)? Could you copy those pages? Is this magazine available in stores? Personally I have never heard of it. I would basically like to know if there is something that maybe I missed. After all it took me a few years to understand how to program mine for trunking.

BY THE WAY EVERYONE! I finally got my light to come up. It only comes on for a few seconds. It never worked on the low band frequencies. However one day just sitting in the car. I decided to do it. (Turn if off and back on while holding the button.) I was shocked it actually worked. Then when I returned to my area and flipped over. It still worked on the low brand frequencies. That function still works even if it is turned off. Now I just need to find a place to put in it in the car when I am driving to see who is actually talking.

Trying to sort out the non important stuff has been hard.

I still do not understand how to prioritize the banks that I want to hear. Like for an example. I am MORE interested in Zone 3 of the Police Department, Fire Department, and the State Patrol. Like I have said a million times. I live where there are low band frequencies/non-trunking. I am use to weeding out what I do not want to hear. (i.e. City PDs) But quickly regaining what I might have locked out.

Above is the web page. you can by it at Books -a- Million and Barnes + Noble or just call them with the number on the website.

Sorry do not have the ablity too scan documents.

Don't forget too check out (radioreference.com)

For 3 pages of info on the Pro 94, it would be nice to
if this is something new or really worth it? By the
way , I have the B version with the pc/if programming
port in a new leather scanner master case any takers?

4389. want to trade for a PRO-95 or better Police Radio Scanner

Yahoo group: pro94owners
Date: 2008-01-11 18:24:18 UTC
From: KE7OVX
Topic: 4389 Message: 4389

I have a PRO-94 scanner, a Jabra Bluetooth Earphone for Cell-phones, and a Palm Pilot M500...all for trade for a PRO-95 or better scanner. the scanner I'm offering is in great condition, but no power/charger adapter but I will include the 4 rechargable batteries with it (2650mAh). The Bluetooth earphone is in good shape, I just can't use it, I need an ear insert kind. The Palm M500 has a protective zipper case, stylus, usb charger/data cable (a cigarette lghter adapter comes with the usb to allow cahrging in a vehicle) and an AC charger.

If you have a different scanner you'd like me to consider trading for, let me know the brand and model # so I can research the scanner and send me pics of the Item you want to trade. My main purpose in trading up is that I want a scanner I can program from the computer and has a multiple line display with alpha tags.

Thank you for reading this. I have no photos for these items, but if you are interested I can take some and email them to you.

I am located in Salk Lake City, UT, but can ship these items to you anywhere in the Lower 48.

Email me: grnbayfandan@gmail.com

4399. Programming Type I Talkgroup IDs?

Yahoo group: pro94owners
Date: 2008-03-08 02:20:12 UTC
From: Walter Little
Topic: 4399 Message: 4399

I have a Pro-94 and I'm about to pull my hair out trying to program Type I talkgroup IDs in. I tried following the manual and that was a total exercise in frustration so I found an on-line version of the manual that was somewhat more concise. What seems to be fouling up my efforts is where the instructions tell me to push the "." (Mon/Clr) button. When I do that it basically erases what I've just put in. What am I doing wrong?

Walter

> am I doing wrong?

I'm assuming the trunked system is already programmed correctly. Turn on the scanner and see if trunking mode is on. If it is, press TRUNK to turn it off. Now press SCAN to place the scanner in scan mode. Make sure the trunked system bank is enabled and turn all other banks off. Press TRUNK to enable trunking on the scanner. If the system is programmed correctly it will begin following the trunked system. All of this is only to make sure you are programming the IDs into the correct system.

At this point simply press PROG and you will be in talkgroup ID program mode. You have five banks of IDs with ten IDs in each bank. To maneuver around use the arrow keys, or you can directly enter the bank channel and press PROG. For example, to get to bank 2 channel 5, press 2, 5, then PROG. Pressing PROG by itself advances to the next channel.

Navigate to the channel you wish to store an ID in. Enter the talkgroup ID and press E. If the ID is valid it will now be programmed into the channel. That's all there is to it! Press SCAN and the scanner will now only stop on the IDs you have programmed. You can turn the banks on or off just as you do the banks of conventional frequencies.

The MON button is used when grabbing IDs while in SEARCH mode. I don't want to add any confusing directions so ignore it at this point, just let us know you have the above working and we can walk you through it.

I just finished trying what you suggested miked and I think it worked
because the scanner didn't beep or buzz in protest. Just one thing I
still don't understand, since type 1 IDs utilize a 101.4 format - and
what I entered was 1014 - does the decimal not being there make a
difference?

Yes, it needs to be entered differently. The block and fleet number (101 in this case) needs to be seperated from the subfleet number (4.) To program the ID 101-4 you would enter 101, then ".", 4, then E.

Sorry, I think I misinterpreted the portion of your original message where you mentioned the ./MON/CLR button and thought you were trying to capture IDs in search mode. My fault.

Once they are entered you can scroll through the ID lists to verify they were programmed correctly. Press MAN while the system is being trunked and you can scroll through the ID banks. You can use the same navigation methods as in program mode, for example 23, then MAN will bring up bank 2 channel 3.

4405. ok, resorting to the group for help

Yahoo group: pro94owners
Date: 2008-03-15 17:26:56 UTC
From: KE7OVX
Topic: 4405 Message: 4405

yet once again, here I am asking for help.

I got the scanner I was looking for in my last post, PRO-95, now I have a new question.

I can program the scanner manually and everything runs fine and I can hear traffic on the programmed freqs, but when I program the scanner from the computer and then try to scan, nothing happens, the freqs are there but when in scan mode it doesn't pick up any traffic on any freq.

I am using the programming software "win95.exe" from starrsoft.com and it was recommended to me by another scanner enthusiast and a fellow ham radio operator and her scanner runs great. I don't have the funds available to buy scancat just yet.

I am also using the programming cable that I bought at R S.

any ideas?

are there other free programs out there that I can use?

Thanks

Dan

I use Win95 (and Win97) and it works well. Just double check the way you have things entered.

Is your problem on conventional channels, trunked systems, or both?

4407. setting up my pro 94 to receive pc if downloads

Yahoo group: pro94owners
Date: 2008-03-16 06:33:27 UTC
From: Lewis
Topic: 4407 Message: 4407

Hi all,
I resently went to radio shack and they attempted to download my local frequencies for me. The computer indicated it was downloading but nothing happened. I have a pro94 B. I was wondering if i had to set up my scanner a certain way to accept the date. The are willing to try again if I can come up with something that explains how to set it up.

I live in the hampton raods area, they use the motorola type II smartnet system. Any help would be appreciated.

It's likely that they need to select a different COM port on the PC. (The correct one that the cable is connected to.)

Topic: 4405 Message: 4410

Rik,

Thanks for the help. I did find the problem and it's not in the program (I un-installed and re-installed the program) but the problem is in the scanner, seems there is a "short" in the scanner somewhere. When I press the scanner in a certain place other than the keys, not only does the volume become louder, but the scanner actually does get reception, and clear too.

Thanks again

Dan

Unless something has changed Radio Shack does not have any programming software for their use that supports the Pro-94B. In fact, Radio Shack still does not officially acknowledge the PC programming feature even exists. Ask them what software they are using. I would bet a nickel they are using software for a Pro-93 or Pro-95 and figuring it is 'close enough' to work.

Does this pressure point stress the BNC jack by any chance? The solder connection method used is somewhat less than good engineering - two perpendicular pins are bent somewhat near each other and then soldered together. It doesn't take much physical stress to break the bond.

You owe me a nickle. Radio Shack has and continues to use a custom version of ScanCat Lite to program radios in store. As most users of this list will agree with, programing scanners with trunked radio systems is not easy for fulltime scanner users and is even harder for the casual user.

The larger issue is that unless there is a scanner user in the store, the files they will load into the scanner will not have everything the user might want. When a customer buys a scanner from the store I work in, the radios are cloned from one of my own radios. Now before you say that Radio Shack should have custom programing for each store, Think about how long it would take to make 5000 plus different files for 7 different scanner models.

OK, I'll admit I was wrong then. Send me your address and I'll happily send you five cents (though with postage due. There are tradeoffs for everything in life. :>)

>

This part I must respectfully disagree with. The hardest thing is just grasping the concept of a trunked radio system. Once that is understood it only requires learning how your scanner wants to be programmed for a particular trunked system. If you understand trunking and talkgroups, getting the scanner to do what you want is pretty simple. I'm not saying I don't need to refer to a manual on occasion for oddball systems but overall trunking isn't complicated.

4415. Need Info On Replacing LCD

Yahoo group: pro94owners
Date: 2008-03-24 21:51:35 UTC
From: twoferthree
Topic: 4415 Message: 4415

Greeting. I own a Pro 94 that was in a car wreck. The LCD and outer screen are cracked. The LCD is unreadable so I would like to replace both of the damaged screens.

Could someone tell me if the LCD is soldered to be PCB and if so, can this be done by the average person? Radio Shack tells me it would cost more to have it repaired than I could buy a new scanner for.

The scanner still works fine. I just can't see anything on the display.

Thanks.

It is soldered in but fortunately it has a relatively large pitch for the pins. Someone with good soldering skills and a decent vacuum desoldering station could have the display swapped out in five minutes. It's certainly possible to remove it using a desoldering bulb/plunger and solder wick but I would be worried about burning the thin traces.

When I tried to order the outer display cover a few years ago I had to buy the entire front case half for the scanner. It was surprisingly inexpensive so I wasn't upset. Combined with cleaning the keypad while the unit was apart it made the scanner look brand new, at least from the front.

Mike, thanks for the heads-up on that, I'll have a look at it and see. The pressure point is actually on the opposite side of the radio as the BNC connector, but still at the top, it's actually under the on-off volume knob.

I'll check the connections as you suggested and get back here with an answer just as soon as I unpack the box that I just packed them into. I'm in the process of moving and (unorthadox to the scanning community) my wife felt that the radios were not important enough to move last and set-up first.

As far as I can tell, you don't actually program in the talkgroup ID's, they simply are displayed while the scanner is scanning in truncked mode, and you can refer to this number and compare to listings to identify who it is talking on that frequency. All you should need to do is program in all the frequencies and control frequencies for a specific call group, and the ID's should come up automatically. Hope this helps.

You rock. That's why Blockbuster's offering you one month of Blockbuster Total Access, No Cost.

In search mode, the radio hears and displays any talkgroup that becomes active.

In scan mode, it only hears and displays talkgroups whose talkgroup ID has been entered and stored.

This is not true. All talkgroups that you want to listen to can be programmed into the radio. Go to Radio Reference.com and find you area. They will all be listed there. Once you have the frequencies programmed in you then program in the talkgroups. You can also program in the alpha tags so you know exactly who is talkiing.

It is not clear to whose message you were responding. But if it is to mine when I said

"In search mode, the radio hears and displays any talkgroup that becomes active.

In scan mode, it only hears and displays talkgroups whose talkgroup ID has been entered and stored."

You must have misunderstood what I was saying. By "entered and stored" I meant "programmed" by the user.

Also to your comment about alpha tags, I do not believe the Pro 94 has alpha tags.

It is rather difficult to know what you are asking here. Are you asking how to get the trunking system programmed so you can program talkgroup IDs, or are you asking how to convert between talkgroup ID formats?

Thanks Mike. I did not see that. But it should also be in the groups title. i.e. "pro94-95owners"

I was thinking he had come up with some sort of trick. That's the only drawback about my 94, no tags! But I've learned them so well by now that I can usually figure out who's talking just by looking at the number. Still wish it had tags though. ;-) Easier on the brain.

Hey guys I appreciate all the info but every department in my area is going Digital really soon so I guess theres not really a point in trying to program all of them into my scanner that doesnt pick up digital. Like I said I really appreciate all of the replies trying to help.

Josh In Weatherford, TX

4430. New: 94 a vs b?

Yahoo group: pro94owners

From: ths_debater_2010
Topic: 4430 Message: 4430

Hi, I have had my pro-94 for several years now. I had given up on it for a while (because my local PD switched to the Moto 2 system and I couldn't figure it out.) but I started to play with it again and I am really trying to actually learn what I am doing instead of just pushing buttons and hoping it works. Anyway, I don't know what version of the 94 I have, so I was just wondering how you tell, and what the differences are. Thanks.

4431. Motorola Type II help PLEASE

Yahoo group: pro94owners
Date: 2008-04-08 07:32:33 UTC
From: ths_debater_2010
Topic: 4431 Message: 4431

Can someone please help me make sense out of this (and what it means to my 94).

40000 Tooele East Law
40032 Tooele
40064 Tooele Car to Car_ West
40096 Tooele Service
40448 Tooele Ch 7
40928 Tooele Ambulance
17664 Tooele Co Region
16928 Tooele Valley Hosp
UCAN Frequencies
Utah Communcations Agency Network
System ID: 7202

I have been trying to figure this out for a while now. I would really appreciate the help, especially if it makes it work!

Thanks so much!

4432. Antenna

Yahoo group: pro94owners
Date: 2008-04-08 07:43:50 UTC
From: ths_debater_2010
Topic: 4432 Message: 4432

I have been thinking about getting a new antenna for my 94. Can I get some opinions on (the following) please?

Either the:

Center loading center whip antenna for $17.99 at RS (Model: 20-006 Catalog #: 20-006)(http://www.radioshack.com/product/index.jsp?productId=2103159&cp=2032052.2032075.2032078.2032098&allCount=24&fbn=Type%2FScanner%26%23047%3BHAM&f=PAD%2FProduct+Type%2FScanner%26%23047%3BHAM&fbc=1&parentPage=family)

Or the:

800MHz scanner antenna for $19.99 at RS (Model: 20-283 Catalog #: 20-283)(http://www.radioshack.com/product/index.jsp?productId=2102525&cp=2032052.2032075.2032078.2032098&allCount=24&fbn=Type%2FScanner%26%23047%3BHAM&f=PAD%2FProduct+Type%2FScanner%26%23047%3BHAM&fbc=1&parentPage=family)

*Note that I use my scanner mainly for police scanning and secondly for aircraft monitoring (if that makes a difference).

I really would appreciate your input! Thanks!

The revision (if present) is just after the catalog number on the back
sticker. You might have to remove the belt clip to read it. The differences
between the revisions:

Pro-94: Original model, does not scan conventional frequencies and trunked
systems simultaneously.
Pro-94A: Scans trunked system and conventional frequencies at the same time, a
few other small features added.
Pro-94B: Added a PC interface.

The B version easy to identify, it has an interface jack near the power
connector.
```

```

While in programming mode, enter a frequency of 0 (or a Talkgroup ID of 0 for trunking.)

I have both of these. The 800 MHz antenna does not give much improvement over the stock antenna on the 800-900 MHz bands. It is more convenient if you wear the scanner on a belt, since it's shorter and more flexible. The center loaded antenna greatly improves reception in most cases, especially the lower frequencies. It requires adjusting the length for different bands, is large, and does not tolerate much physical abuse. It can also easily damage the scanner's antenna jack if it is struck hard while extended.

Each of those is a "talkgroup". If you enter the number and store it in a talkgroup list, you can scan those talkgroups for activity.

You might want to look here:

http://www.radioreference.com/apps/db/?sid=601

These numbers are called Talkgroup IDs, which identify what group a user is
communicating with. The first thing to do is read up a bit about how the
systems work:

http://www.signalharbor.com/ttt/00jan/index.html
http://www.signalharbor.com/sr/05apr/index.html

Once you understand how it works it's actually pretty easy to get programmed.
If the manual isn't clear try looking here:

http://myweb.cableone.net/marksscanners/94AB/94AB.html
```

You would use the 40000 number. If you do not have a manual for the radio,
you can download instructions online.

I'm not sure if this will help you or not, but I'm also in Illinois and have found a wealth of information at this site.
http://www.radioreference.com/apps/db/?stid=17

the link should bring you to a map of Illinois with all counties outlined and a list of cities below.

Hope it helps you out...

Which one is the yellow? I only use the rechargeable carrier and have the alkaline one around here somewhere, I'd be happy to send it your way.

Step by step process:

1. Sell Pro 94

2. Buy new radio.

Just kidding, Pro94 does not do 700, and if it did, it wouldn't do digital.

4454. Help with the Pro-94

Yahoo group: pro94owners
Date: 2008-05-11 14:57:20 UTC
From: Ron Reedy
Topic: 4454 Message: 4454

I have a Radioshack pro-94 and I am not sure I understand how to set up a trunking channels for Indian river fire rescue (I am a volunteer fire fighter) I have a Motorola pager that the fire company gave me with one channel 151.450 I get dispatch but no tac channels and when they go to tack channels I get no commutation. can I find the fire channels with out the police and garbage pick up on the 800 MHz frequencies.

Please help

Ronald Reedy
Phone 772-321-9922

The way I understand if you have all the 800 Frequencies enter, and can hear radio traffic. You would have to weed out the PD and everything else.

If you cannot hear anything on the 800 Frequencies. But have everything enter, press Trunk, and then the Limit button if I remember, correctly.

That just means you aren't trunking. If you are seeing frequencies.

Like I said if I remember correctly off the top of my head. Press the TRUNK button, and then the LIMIT/SRC button. If you do not see any banks. I think they are 5 digit numbers.

You have asked a question with a string of answers. The "Radio Reference" website has answers to frequencies you need (Listed by state and county). If it's a trunked system, you need to enter ALL of the frequencies for that system and let the scanner "trunk". You will see TG's or Talk Groups listed. You can split them up by service in different banks. (I have my county fire stuff in banks 1 and 2, Tactical in 3, EMS in 4, PD's in 5, 6, 7, and 8, etc.) That way you can "lock out" the bank with what you don't wish to listen to. Yes, the scanner will scan betewwn "conventional" and "trunked". Feel free to look around here in "previous messages". Many questions you have, have PROBABLY been asked before, and reading other answers and posts may give you additional ideas that you might (or might not) like.
Happy scanning, and if your still not sure, ask again. (I had an issue before where I had 3 different answers before getting the correct one - which was "operator error".)

You already have one and it is black. I had the same problem. If you look at your black battery holder you will see the two metal prongs that send the electricity to the unit. If you look at the unit you will find there are three prongs. The third prong is the battery charger that doesn't touch anything on the black holder. I took a small picture hanger hook and cut off a small piece and placed it behind the more center one so you have contact with the third prong and it is a yellow one. Less then 15 minutes of work. Just remember to use rechargable batteries or remove the metal.

4462. back - up and running again

Yahoo group: pro94owners
Date: 2008-05-31 04:00:58 UTC
From: KE7OVX
Topic: 4462 Message: 4462

ok, last time I wrote I was packing for a move and my wife is not prioritized like I am, the scanners and ham radios were first packed and last unpacked (she says it's the smart way if she wants my help).

Well, things are unpacked (all 4 scanners and 1 ham radio) and back up and running and now come the questions again.

I am using win95 to program my PRO-95 and it's getting more fantastic each day, things are blaring on my radios and my sanity is coming back. My main question is:

Is it possible to program a 154.xxxxx freq and a 868.xxxxx (which is trunked on the UCAN motorola type II) in the same bank? AND if it is, what TYPE setting do I use, conv? am? fm?

if it's not then I'll just continue with what I'm doing.

Thanks for all the help and happy scanning

73

```

The scanner will let you mix trunked and non-trunked frequencies in the same bank. Program the trunked system as normal. Then make sure you are out of trunk programming mode and program the non-trunked frequencies as you normally would. While scanning, the scanner will scan the trunked system first and then scan any conventional frequencies in the bank.

ok, thanks Mike,

I just re-read my question and I didn't understand myself, I wanted to say that there is a dropdown menu at the top-right corner of the bank selector called TYPE and it gives me the options of CONV, MOT, or EDACS. When programming both FM and MOT freqs in the same bank, what setting should that be set at?

Thanks again

Dan

The bank type will need to be whatever trunked system type you wish to monitor. For the trunked frequencies the channel type will need to match the system type. For the channels using conventional frequencies, use either FM or AM depending on whichever modulation is used.

4467. another question for the group

Yahoo group: pro94owners
Date: 2008-06-04 01:35:30 UTC
From: KE7OVX
Topic: 4467 Message: 4467

you know how on other scanners in the VHF range you can stop scanning and hold a certain freq to listen to "action" on just that 1 freq?

is it possible to do that to a trunked freq? I want to hold 1 trunked freq on 1 tg ID to listen to action from that tg

when I put the scanner in manual mode on that freq, the channel automatically goes to static and "ctrl" comes in the TGID area.

any ideas?

Thanks,

Dan - KE7OVX

Topic: 4467 Message: 4468

You should be able to press the PAUSE key to hold that TG. Or perhaps press and hold the TRUNK key until it beeps. That's the way to do it on most other Pro-xx models, but I haven't had my 94 turned on recently. Give that a try Dan. ;-)

Regards,

SS

Yes, but you must do it in trunk mode. You have two options to do this:

1. Wait until the specific talkgroup ID is active and being received by the scanner. While it's active, press and hold the TRUNK button until the display shows "ID hold ON." Press SCAN or TRUNK to resume scanning.

2. Program the ID into a trunk system bank either by itself or lock out all other IDs in the bank. Set the system's trunking mode to closed and disable all banks for the system except the one with the ID you wish to monitor. Also turn off all other scan banks.

This limitation is the reason I won't be purchasing any GRE scanners in the future. On Uniden scanners (and Uniden made RadioShack models) you can simply put the trunked system in manual mode and navigate to any programmed ID, much like you would manually monitor a conventional channel. For whatever reason, the GRE programmers don't expect anyone to want to only monitor 1 ID all of the time.

Are you serious? You bought a NEW Pro-94 TODAY from RadioShack?
The model is about 8 years old. How much did you pay??

As far as a manual, I like http://myweb.cableone.net/marksscanners/94AB/94AB.html BUT it does not include everything.

You're not planning on using this scanner on 800 MHz Motorola Trunking systems, are you? It will soon be rendered useless for that by re-banding.

This question is going to get alot of responses....some good, some bad...Your answer depends on what you are trying to listen to. Particularly what types of radio systems are currently being used in your area. A quick search on radioreference.com will surely let you know what frequencies are being used in your area...the next step is to find a reciever that will recieve these transmissions, and can make any sense of them...Hope this helps.

So you actually bought it at RadioShack? They still had an 8-year-old scanner in their inventory? Was this a dealer store or a corporate one? You actually bought it for $12 NEW? I bought mine in January (used) from a friend and paid $30. $12 for a new one (even if it was the display model) is a steal. Good going.

4482. Pro-95 "HALP!"

Yahoo group: pro94owners
Date: 2008-09-08 13:30:01 UTC
From: Donald Saunders
Topic: 4482 Message: 4482

Good Morning All!

Long time no post. Well, I've had health issues.

Here's the deal. Somehow, Ive managed to lose the website of the gentleman who had the "cheat sheet" for the Pro-95. I have the one from the www.radioreference.com wiki, but it doesn't really explain HOW to input "talk-groups" and "text tags" into the '95 once you already have the control channels inputted. The way I understand his way, is that when you put the "text tag" in, it "names" the control channel. This is NOT what I'm looking to do, Ha ha ha.

The enity I've programmed has 7 channels. I've tried putting just the one control channel in, but it won't scan unless the other non-control channels are input as well. There are only 11 talk-groups, I really want to listen too. When I try to input them, it goes to all 7, then won't take any more. What am I doing wrong?

For those of you who live close, the CADDO 911 Communications Dist. #1, has opened up some new talk-groups due to Hurricane Gustav. With "Ike" bearing down on the Gulf Coast, we probably will get a lot of evacuee's, again. (It's our pleasure, really). So, if you have that bank "locked", I'd unlock it, for now, LOL! You hear some pretty interesting stuff, but I won't say what.

I've gotten my Pro-94 (plain) to work again, but at extremely low volume. I've loaded it with low-band (30-50mHz), vhf hi-band (150-174 mHz) and uhf lo-band (406-512 mHz) frequencies to monitor the fire, police, sheriff, ems, etc. frequencies during Skywarn and declared Emergencies (train chem spills, 18-wheeler chem spills, refinery fires, air crash landings, etc). It stays charged and at the ready, just-in-case. The PRO-2053 is loaded the same and on, while I'm "awake", anyway, LOL!

I'm making preparations for passing "H&W" for "Ike". If you have a reciever capable of hearing 3925 kHz and 3935 kHz, those are just two of the Gulf Coast Hurricane net frequencies.

Respectfully submitted,
73,

Don/KA5LQJ

4483. frequency software

Hi Robyn,

If I'm not *misteaken*, only the 94-B has the programming "port" (small phone plug), the others have to be manually done. Don Star over at StarSoft has some excellent programs, I understand.

Being a hard-headed, ol' fart, I manually program mine in the Pro-94 (plain), Pro-95, Pro-26, Pro-2045 and Pro-2051. The only thing "digital" around here is the Bossier Parish (next parish east of me)Sheriff's Dept. They have very limited digital and analog traffic, so I don't even bother too.

Radio $haft recommended "ScanCat" for programming that scanner. It's a LOT easier to do it manually and save $30.oo. ;-)

Right now, we're all hunkered down, awaiting "IKE" to come our way. I've lowered the antennas to 15' in height and have agencies programmed in within a 70 mile radius from Shreveport, LA. I've also got the Icom 706MkII-G on the wide-area 2 meter repeater for Skywarn (146.67mHz 600kHz minus offset)

Respectfully submitted,
73,

None of the Starrsoft programs support the Pro-94 since it is a Uniden manufactured scanner. Starrsoft only works with GRE equipment.

4492. I'm really glad this group is here, yet another problem for me

Yahoo group: pro94owners
Date: 2008-11-23 20:00:23 UTC
From: KE7OVX
Topic: 4492 Message: 4492

I have a perplexing problem that I can't solve.

I use Win95 V00.13 for programming my PRO-95 scanner, and my Dell Inspiron 4000 laptop is exclusively used for all my scanner and amateur radio programs and things like that, it really serves no other purpose anyway.

My problem: once in a great while, I'll change the banks around in my scanner, I usually leave 1 bank as a trunk ID search bank and leave it open while the others are closed. It's a pain in the neck but once in a while I'll find a TGID that I didn't have.

This particular time, I uploaded all the new changes (none to the settings, just freqs) and now all my scanner will receive is VHF & UHF freqs, it doesn't receive ANY trunked freqs at all, NONE.

I'm beyond frustrated, so I return yet once again to the group for your wisdom and insight.

I can supply my programming file for anyone who thinks they can help, it's in .p95 format, just give me your email address.

Thanks and 73

Dan - ke7ovx

4493. PRO 94B Scanner lost trunking

Topic: 4493 Message: 4494

I wonder if it is re-banding ? I have heard that movement in frequencies on a number of truncking systems has caused trunking faliures. The older radios like the 94 + 95 have not been easy to use due to firmware issues . Check radioreference.com and check your states forumn..the folks there can usually help..

So it is correctly following the system? I was under the impression the Motorola systems would not trunk correctly in the new channel plan. There aren't any of these rebanded systems local to me (the systems near me are converting to 700 MHz P25 systems instead of just rebanding, blech) so I couldn't verify the fact, but I'm very glad to hear your scanner will keep working.

4497. Re: Thank you MIke, I'm up & running again

Yahoo group: pro94owners

From: KE7OVX
Topic: 4495 Message: 4497

It is correctly following the system only because I don't think they rebanded more than they re-assigned frequencies. I found that some freqs I used to use were re-assigned to different counties (I compared to former lists I had). The freqs were still in the 800MHz so I guess it would stand to reason that they stay in the same system.

Thanks again and 73,

Dan

Hello?

I'm wondering if anyone saw my post of 8 September asking for help in re-programming my Pro-95? It's gone 'unanswered' or have I missed something?

I can't remember the website that contained certain short-cuts (no Frank Monroe's, I have those) that was a better set of instructions than the Rat $hack manual. I need to re-program the unit with both trunked and conventional frequencies, talkgroups and alpha tags.

Can someone help a mentally-failing old man?

Respectfully,

Hi David,

Well, NONE and I mean NONE of the Radio $haft stores in the Shreveport/Bossier City LA. (Northwest corner of the State)even HAVE that software any more and the store personel were selling shoes or garden supplies at Wal-Mart last week. They have no "concept" of electronics, other than how to program a cell 'phone. They don't even carry or would order the cable capable of programming the scanner with the software from Don Starr.

At one time, there was a disabled fellow in East Texas that had a website that had great shortcuts. Evidently, he ran out of money to keep the site up.

Frank Monroe has some shortcuts, but I may not be following his instructions very well. I never could get them to work.

So far, I "cleared" the "memory" by pressing "0", then "1" just before the "Welcome screen". This *re-initialize's* the scanner.

I'm wanting to put the Shreveport Fire Dept and "talk-groups" with alpha tags, in Bank "0". They are on the Caddo 911 Communications Dist. # 1's 25 frequencies. Since they are 800 mhz trunked frequencies, I have the option of programming in ALL 25 OR just the 4 control channels (10,15,20, & 25). I would prefer to program all 25, alpha tag each one. Then, hopefully, I could just program the talk groups I want to listen too and "lock" the bank as not to get all the other agencies on the Caddo 911 system.

Bank "1" would have all the "conventional", vhf, low-band; vhf hi-band; uhf, lo-band frequencies.

Bank "2" would have all the Shreveport Police talk groups that I want to listen too and include some of the surrounding cities talk groups as well.

Bank "3" would have all the "conventional" police departments.

Bank "4" would contain all of the Bossier City Public Safety frequencies and talk groups.

Bank "5" would contain all the "unknown" agencies listed with no particular agency designation.....Bienville, Parish of...?? Some are listed as a "PX" and even though the frequency FALLS within a certain group (Police), you can't be sure that that is a police agency. For example, some the "Highway Maintenance" (PH) area in East Texas, are actually a local VFD. ????? So, they only put out highway fires? LOL!

Bank "6" is strictly going to be for 10 meter and 6 meter simplex and repeater frequencies.

Banks 7, 8, & 9 will have something, but I have not decided just yet.

I'm a "fire buff", but I don't jump in my F-150, own flashing lights or a siren, like "whackers" do. I don't even drive much, because I'm medically disabled, so the only time I'm out is to go to the doctor's office. I even stay home when bad wx comes and there is a Skywarn call-up. I also have other scanners...Pro-26, Pro-58, Pro-94(plain), Pro-2042 and Pro-2051. Then for ham gear, I have an Icom 706 Mark II-G, Heathkit 2036, Heathkit SB-220 amplifier, Radio Shack HTX-10, HTX-100, a couple of E.F. Johnson, *Viking* Messenger 1's ("Whiteface") that have been converted to 10 meter AM, and even an old, Cobra 138, ROFL! They ALL work.

Well, if anyone gets a lead on how to program the '95, by hand, I'd be very grateful if they would e-mail me the instructions.

If I hit "Manual", get the bank channel ("000" for instance) hit "Program", then "Trunk", the screen says it's not programmed for trunk and to hit the "Mode" button. If I do, it want's talk group numbers and no frequencies. ??? HALP!

Respectfully,
73,

Don/KA5LQJ

4508. Monitor specific Trunks??

Yahoo group: pro94owners
Date: 2009-01-17 19:37:34 UTC
From: Emery
Topic: 4508 Message: 4508

I am trying to monitor specific trunks on my Pro-94 and I'm having a hard time trying to figure out how to do that, there is just to much traffic going on here in Portland Oregon area to scan the whole trunk system they have here. If anyone can help me with this, it would be greatly appreciated. The trunks I'm trying to only monitor are:

Portland Police Bureau - Southeast Precinct:

9456 PPB SE Dispatch
9520 PPB SE Tac 1
9584 PPB SE Tac 2
9616 PPB SE Tac 3

4509. Re: [pro94owners] Monitor specific Trunks??

Yahoo group: pro94owners
Date: 2009-01-18 00:26:40 UTC
From: James Tillery
Topic: 4508 Message: 4509

You will only be able to monitor one at a time by either pushing the HOLD button when you hear traffic you want to listen to exclusively or key in the trunk ID and push hold. The 94A or B may be different.... I'm not sure.

Subject: [pro94owners] Monitor specific Trunks??

I am trying to monitor specific trunks on my Pro-94 and I'm having a hard time trying to figure out how to do that, there is just to much traffic going on here in Portland Oregon area to scan the whole trunk system they have here. If anyone can help me with this, it would be greatly appreciated. The trunks I'm trying to only monitor are:

Portland Police Bureau - Southeast Precinct:

9456 PPB SE Dispatch
9520 PPB SE Tac 1
9584 PPB SE Tac 2
9616 PPB SE Tac 3

Each trunked system has 5 talkgroup ID banks for this purpose. First, turn off
all conventional banks except the one with this system. This isn't really
necessary but it helps make sure you're entering the information in the correct
system. Turn on trunking (if needed) and get the scanner following the trunked
system.

Press PROG to enter the ID programming mode. At this point, entering talkgroup
IDs is just like entering conventional frequencies in the conventional banks.
You have 5 banks which each hold up to ten IDs. Let's assume you are putting
these IDs in the first bank. Start by changing the current channel to bank 1,
channel 1. You can either use the up/down keys or simply enter "11" and press
PROG. Type in the ID you want for that channel and press E. Now either press
up or PROG to advance to bank 1, channel 2. Enter the next ID, press E, and
continue until you have entered your desired IDs.

Press SCAN to change the trunk tracking mode to ID scan. If no talkgroup IDs
were properly entered the scanner will respond with an "Error" message. If
they were put in correctly you will see "ID Scan" scroll across the display.
Only the talkgroup IDs you have programmed (and not disabled or locked out)
will come through.
```

Hector,
I have a pleather pouch for mine, but it came with it when I bought it off e-bay. As for there availability now?? you will probably have to do some research on craigslist or e-bay.

I myself do need some parts for my 94, does anyone have any spare parts or one to part out?? I need the connection piece for the battery cover that is inside the radio. One of the tangs broke off and it does not always make a good connection with the other two batteries in the cover. Any help??

4523. HELP!!

Yahoo group: pro94owners
Date: 2009-02-23 04:32:15 UTC
From: Rob Inzano
Topic: 1849 Message: 4523

I am programming our local Mot trunking system for a friend, and I followed the directions exactly, but it's not working. I've programmed many other scanners before for the same system, but this one isn't working. I set the trunk type (E2 UHF), program the frequencies, press scan (and I've tried it without pressing scan in case it's not the "A" model) but when I press "SRC", the scanner only beeps once. It does not display "search" at the bottom or anything. If I press and hold the "SRC" button, it beeps twice. What gives?

By the way, I have another scanner right next to me that receives the same system as I'm programming with between 4 and 5 (out of 5) bars, so I gave excellant reception of the system.

Any help is appreciated.

Press the TRUNK button to engage trunking mode.

Sorry, the behavior you described is exactly what happens when not in trunk mode so I thought you had not entered that mode. It also behaves that way while in trunk mode but not yet actually trunking which is exactly what you described above.

The first thing to do is verify the frequencies were correctly entered while in trunk programming mode. Turn trunking off if it isn't already. Press MAN to go into manual mode. Enter the channel number of the first frequency of the system and press MAN again. Just above the channel number and slightly to the left you should see a capital 'M' on the display. If you don't, the frequency wasn't programmed in trunk programming mode. Press MAN to advance to the next channel, look for the M, etc until you have verified all of them have it. If they don't, you'll need to program them again. The M indicates the channel is part of a trunking system for that bank, if a channel doesn't have it the system won't look at that channel while trunking and instead treats it as a conventional frequency.

Since the system you're programming is a UHF Motorolla, you'll also need to enter the system base frequency and channel offset step size. You'll find those listed wherever you got the frequency information from. Make sure trunking mode isn't on (not really necessary, but makes things a lot easier here.) Press PROG and then TRUNK to enter trunk programming mode again. Press the number for the bank the system is stored in. You'll see the trunk type selection again, just press E since it should already be on E2-UHF. You'll then be at the first frequency you entered. Press DATA. The display will change, and instead of a channel number you will see "BAS" where the channel number previously was. Enter the system's base frequency and press E. Press DATA once again. Instead of BAS you will now see OFS (or was it OFF? Can't remember offhand.) Enter the channel offset step size and press E. The scanner is expecting the offset in kilohertz which is likely what your information source has listed as well.

Your frequency information may have the offset listed as offset, step size, channel offset, or frequency offset. Sometimes you may also see a third "channel offset" number which is always an integer, just ignore it.

At this point the scanner will be kind of stuck - you can't do anything without changing modes. If all of the frequencies were correctly tagged with the M when you looked through them, just press SCAN at this point. Make sure the bank with this system is active and press TRUNK to activate trunking mode.

Don't worry about pressing SRC, the trunked system will automatically go into search mode if/once it starts trunking at this point.

Give all this a try and let us know how it goes.

4527. Pro-94 hyper driving me over the edge!

Yahoo group: pro94owners
Date: 2009-03-01 22:53:46 UTC
From: drvncrzy2005
Topic: 4527 Message: 4527

I have this scanner. It was working fine. Someone played with the buttons and now it says hyper on the regular scanning screen where it did not before and it will not pick up transmissions. If I put it on manual, hyper disappears and it will pick up transmissions for that channel. It also beeps 5 times after each transmission when in manual mode. It also says scan where it said search when it worked before. Radio Shack and its manual are useless.

Any help would be appreciated.

Thanks
Nyssa

"HYPER" always appears when the scanner is scanning in conventional mode.
Likely you were using trunk mode before (see below.)

>
> If I put it on
> manual, hyper disappears and it will pick up transmissions for that
> channel. It also beeps 5 times after each transmission when in manual
> mode. It also says scan where it said search when it worked before.

Based on what you are saying here it sounds like you are trying to listen to a trunked system and trunking mode is turned off. The five beeps are the disconnect tones for an EDACS system and you'll only hear them when listening to the channels as conventional frequencies. Does the scanner display the TRUNK tag in the upper left hand corner when you press SCAN to enter scanning mode? If not, press the TRUNK key to engage trunking mode. Once the system begins trunking it will probably be in search mode (the SEARCH indicator in the bottom right will be shown.) If not, just press SRC to change to that mode.

>
> Radio Shack and its manual are useless.

Actually reading the manual would have solved your problem in about ten minutes. I'm not trying to be a jerk, but 99.99% of problems such as this are due to skimming through parts of the manual, not understanding it, and then giving up immediately. It is well worth your time and effort to read the entire thing.

Hey,

I appreciate the response. Trunk is in the corner, and I have read the manual twice and "hyper" only has like 3 sentences about it. The only difference between now and before is the "hyper" and scan instead of search. pressing the src button changes nothing when i press it as is. pressing trunk takes it off trunking and allows me to hear some transmissions but not all. I havent ever had hyper shown and it has always worked perfectly,

Thanks again,
Nyssa

4530. EDACS ID Help- Can't get more than 50 ID's in?

Yahoo group: pro94owners
Date: 2009-03-08 08:55:10 UTC
From: kzellmann@sbcglobal.net
Topic: 4530 Message: 4530

Hi All,

I'm new to the group, I found it while looking up help for my problem. I've got a PRO-94 that I just dug out of storage (it's been like 3 years since she's been running) But it fired right up with new batteries. The problem I've got is that the old program is no good because I have moved. So I blew it all out and started over. I've got two issues One is that I can't figure out how to get more than 50 Talk group ID's into the scanner. Two I'm perplexed as to where to put two conventional 154mhz frequencies for Fire Tone Out if you can't scan trunked and conventional in the same bank?

Some background I'm in Wisconsin, Ozaukee County trying to scan an EDACS Wide system. (I get the Control Freqs and Talk Groups from www.radioreference.com) I've got two Uniden's up and working a BCT15 and a BC246t. I know enough to be dangerous with a scanner but I'm not an expert by any means.

I've read the manual over and over and I just can't figure it out, I've searched the posts in this group but to no avail...

I've looked at the simplified owners manual at marksscanners.com but that was no help to me either.

What I have in is working, but I can't get anymore ID's in. (I'm using the AFS format (xx-yyy)

Lists 1-5 / (1-10) are full and when I try to enter another ID it just reverts back to 1-1

Have I given enough info? Can anyone help?

I can be reached direct @ kzellmann@... if you don't want to post to the list. Any help is welcome. I'd be happy to give more info if needed. Thanks!

Kurt

Good Morning from Louisiana!
(Bon Matain de Luzianne!)

Kurt, if you want to program the conventional frequencies, you can do that in the same as a trunked bank. It will scan the trunked first THEN go to conventional.

Now about the ID's, are you trying to put more than 50 per bank? Here in Caddo Parish, the 9-1-1 Comm District, "leases" the radios,etc. & "air time". We have S'port PD, S'port Fire, Caddo Parish SO, outlying Caddo Fire Districts and mostly everything else. There is also on different systems, the Bossier City Public Safety (Police & Fire), LA. State Police (although they are slowly going to 700 mhz) and then the Texas Counties and Arkansas Counties, LOL!

What I did was to put the Shreveport Fire in Bank 1 (Trunked) and their ID's, then the Caddo Fire districts ID's (trunked). Bank 2 has the Shreveport PD, Caddo Sheriff, and outlying Caddo parish town's ID's (Trunked). Bank 3 has Bossier Public Safety ID's (trunked) and the different fire and police units (Conventional) in there. Bossier Parish Sheriff is Digital, so I don't bother. Bank 4 has the LA. State Police (800mhz - Trunked) and their ID's, state-wide. Bank 5 has all the Texas Counties Fire Departments, along with other Louisiana near-by parishes (Conventional). Bank 6 has Texas counties Law and other LA. Parishes Law (conventional).

Living where I do, there are 3 states, Ark-La-Tex that are near enough for me to hear on the 94 with a long duckie or if mobile, an outside 10 meter whip, LOL! I can hear mostly hi-band VHF (150-174mhz) quite readily. At home, I can hear low-band VHF (30-50mhz) and 6 meter FM openings. I can hear low-band UHF (406-512mhz) at home within about a 40 mile radius.

I do have other Rat $hack scanners as well. I use all of these during severe weather outbreaks (Skywarn) or Disasters (Bossier City Marshal's Emergency Task Force, K5BMO).

The only solution I see is to "upgrade" your scanner collection and get a better scanner. Not a cheap deal. :-(I know, I'm on disability. But, eventually, I hope to upgrade to a Bearcat, digital, hand-held.

Sorry I could not be of better help.

Respectfully submitted,
73, (Best Regard)
Don

This still indicates the scanner is not trunking the system you wish to hear. HYPER appears in two situations. The first is when scanning conventionally (scanning but not currently trunking, in other words.) The other is during certain limit or direct searches in very specific bands. Everything you've said indicates you were following a trunked system previously and for whatever reason you are no longer doing so. We need to find out why.

Just as a side note, the reason HYPER appears during conventional frequency scanning is that Radio Shack calls their channel scanning technology HyperScan on their Uniden made scanners. It doesn't mean a thing. It's a sales gimmick to say you are not just scanning, you are HyperScanning(TM)! Much like sticking the word "Turbo" to a car name even though a turbocharger has not been added. I'm more or less rambling on this subject so just ignore it if it is confusing. Meanwhile, I'll be HyperScanning(TM) in my Chevy Turbo Citation(TM) while only scanning 50 channels per second and going 55* MPH.

* - Maximum safe speed in Turbo Citation without additional roll bars and safety restraints. Even at this speed driver is pushing his/her luck.

>
> pressing the src button changes nothing when i
> press it as is. pressing trunk takes it off trunking and allows me
> to hear some transmissions but not all. I havent ever had hyper
> shown and it has always worked perfectly,

Pressing SRC while in conventional scanning mode doesn't do anything, so this is expected. It only has a function while either following a trunked system or creating a limit search.

The very first thing to do is find a current frequency listing for the trunked system you were following earlier. Rebanding has moved some of these around in parts of the country, so please find a current list. If it has changed, re-program the scanner with the new frequencies and we will go from there. If it hasn't changed, we need to make sure all of the channels are still programmed correctly and verify they have not been locked out (you did say someone had been playing with the buttons, so one or more channels may be locked out and thus not available for trunk tracking.)

In either case the verification steps are the same. If the scanner is in trunking mode (TRUNK will appear on the display) press TRUNK to disable it for now. Press MAN to go into manual mode. Enter the channel number for the first

frequency in the system (1 for bank 1, 51 for bank 2, etc.) Verify that this frequency is the same as the first frequency in the list you looked up in the above paragraph. Also, make sure there is an E in the left side of the display and make sure L/O is not displayed. The E indicates this channel is part of a EDACS trunking system for this bank and the lack of L/O indicates the channel isn't ignored. Once you have done this, press MAN again to advance to the next channel. Do the same verification for this channel, press MAN to advance, etc until all channels for this trunked system are verified to be correct.

If everything has shown to be correct, press SCAN to go into scan mode. Verify that the bank this system is in is currently enabled (the bank number will show in the scan list while not receiving a transmission.) If it isn't, press the number of this bank to enable it. Press TRUNK to enable trunking mode. If everything goes right, you will either see "Id SCAN" scroll on the display or "-- ---" along with the SEARCH tag. If neither of these appear and you are still getting the same results as before, something else is wrong. If it doesn't work, or one of the above steps does not go as anticipated, please let us know what exactly wasn't correct and we can help from there.

If things still do not go well, don't give up! Everyone struggles with trunking at first, but once the concept 'hits' it will be as simple as conventional frequencies. Maybe more so.

In-Reply-To: Mime-Version: 1.0 Content-Type: text/plain; charset="us-ascii"

Hi All,

I'm new to the group, I found it while looking up help for my problem. I've got a PRO-94 that I just dug out of storage (it's been like 3 years since she's been running) But it fired right up with new batteries. The problem I've got is that the old program is no good because I have moved. So I blew it all out and started over. I've got two issues One is that I can't figure out how to get more than 50 Talk group ID's into the scanner. Two I'm perplexed as to where to put two conventional 154mhz frequencies for Fire Tone Out if you can't scan trunked and conventional in the same bank?

Some background I'm in Wisconsin, Ozaukee County trying to scan an EDACS Wide system. (I get the Control Freqs and Talk Groups from www.radioreference.com) I've got two Uniden's up and working a BCT15 and a BC246t. I know enough to be dangerous with a scanner but I'm not an expert by any means.

I've read the manual over and over and I just can't figure it out, I've searched the posts in this group but to no avail...

I've looked at the simplified owners manual at marksscanners.com but that was no help to me either.

What I have in is working, but I can't get anymore ID's in. (I'm using the AFS format (xx-yyy)

Lists 1-5 / (1-10) are full and when I try to enter another ID it just reverts back to 1-1

Have I given enough info? Can anyone help?

I can be reached direct @ kzellmann@sbcglobal.net if you don't want to post to the list. Any help is welcome. I'd be happy to give more info if needed. Thanks!

Kurt

The first time I posted this it got horribly mangled somehow, so here it is again.

>
> Two I'm perplexed as to where to put two conventional 154mhz frequencies for
> Fire Tone Out if you can't scan trunked and conventional in the same bank?

Only the original PRO-94 has this limitation. Look at the back of your scanner at the catalog number. You might have to remove the belt clip to see it. If you see an A or B after the catalog number your scanner will follow trunked systems and conventional frequencies at the same time. If so, you may put the two conventional frequencies either in the same bank as a trunked system or in another bank with available channels. If not, you'll have to put the two conventional frequencies in a different bank and turn off trunking to scan them.

From the rest of your message it appears you have the trunked system you wish to monitor working. You are 99.9% there! The remaining part is much easier.

Each trunked bank can only hold 50 talk group IDs as you have found. If you want or need to enter more than that, there are several options:

1. Do you really need to enter all of these IDs? Doing so is not needed to simply follow the trunked system. Instead of going into ID SCAN mode, you can go into search mode by pressing SRC. The scanner will stop on the first active talkgroup ID found on the system. When that ID is no longer active, or if you press SRC again, the scanner will move on and stop on the next active ID. The talkgroup ID scan (or manual) mode is for limiting what IDs the scanner stops

on rather than stopping on the first transmitting talkgroup the scanner finds.

2. Instead of programming individual talkgroup IDs, you can program a partial ID in one channel and it will receive all talkgroups which match the particular partial ID you entered. For example, say you program an ID of "14-". To do this, you would simply program this ID as "14." and then press E. You have thus programmed in the Agency of 14, and all fleets and subfleets under this Agency would then be received by this partial ID. 14-134 and 14-136 would be received by this partial ID, for example. You can also program in a partial Agency and Fleet, for example "14.04" would receive all talkgroups under this Agency/Fleet.

3. There isn't any reason you cannot program the same trunked system into another bank and thus have another 50 talkgroup IDs available to program. I do this on a particularly large system that is near me. One bank programmed with the system has law enforcement talk groups programmed for it and another has fire/EMS. I can thus enable and scan both of these systems and they act as if it was one system with 100 IDs available, more or less.

I did all of this and came back with the same results. While on Manual setting it picks up transmissions. When I push trunk it goes back to "hyper" setting and will not pick up transmissions.

From the Radio Shack support web page:

Answer: Hypersearch can only be turned on and off through a limit or direct search. To turn it off, you should do the following:

Through Limit Search:

1. Press PROG, then LIMIT (SRC). Lo and 29.000 MHz appear. 29.000 MHz is the low end of the scanner's range.
2. Enter the frequency that is the lower limit of the range you want to search (including the decimal point), then press E (SVC).
3. Press LIMIT (SRC). Hi and 1300.00 MHz appear. 1300.000 MHz is the upper limit of the scanner's range.
4. Enter the frequency that is the upper limit of the range you want to search (including the decimal point), then press E (SVC) again.
5. Press \/ to search from the upper to the lower limit or /\ to search from the lower to the upper limit.
6. While the scanner is searching or is on a transmission, press H/S.
7. HYPER should disappear from the display.

Through Direct Search:

1. Press MAN.
2. Enter the frequency you want to start from using the number keys. (Press . to enter a decimal point).
Note: To start the search from a frequency already stored in one of your scanner's channels, press MAN or PROG. Then use the number keys to enter the channel number and then press MAN or PROG again. If you enter an invalid frequency, the scanner displays Error. Press MON/CLR (.).
3. Press \/ to search downward or /\ to search upward from the selected frequency. -d-, SEARCH, and either \/ or /\ appear.
4. While the scanner is searching or is on a transmission, press H/S.
5. HYPER should disappear from the display.

Radionut53 (since 1998)

RADIOSHACK PRO-94

```
function doRollover(elem, rollover_color, text_color){
// set background color of TD
if (elem.parentNode) { // IE5, IE6 and Netscape 6
if (rollover_color == 'transparent' ){ // Netscape does not like the word "transparent" .
elem.parentNode. bgColor = '';
}
else{
elem.parentNode. bgColor=rollover _color;
}
}
else if (elem.parentElement && elem.parentElement. setAttribute) { // IE4.
elem.parentElement. setAttribute( "bgColor" , rollover_color) ;
}
else{ // Netscape 4.6x or 4.7x
//alert("Must be Netscape! do nothing");
}
// set color of the link text
```

```
if (elem.children) { // IE4, IE5, IE6 and Netscape 6
elem.children( 0).style. color=text_ color;
}
}
```

Computer Problem fixes

230-406MHz restore. Open your scanner and remove diode D382 and install a jumper in its place, now unsolder the collector from transistor 83. install a 270 ohm resistor between the collector and where you removed the collector from. Put your radio back together and now you have the military aircraft band.

Realistic/Radioshac k pro-94 keypad mods:

********** ********* ********* ********* ***

hold 2/9 turn on -> total reset

hold 2/9/hold turn on -> 144-153.980mhz

hold 2/9/scan turn on -> test frequencies

hold 2/9/prog turn on -> trunk ct -- --- hold

hold 2/9/enter turn on -> display test

hold 2/9/src turn on -> search: 510-512mhz

hold 2/9/alt turn on -> 00 00 00 NOTE:use up and down too change settings.

hold 2/9/. turn on -> H or L NOTE:hit delay too change settings

hold 2/9/4 turn on -> (3.00) then it changes too (32 2ch) then back too frequencies

hit any key,each key sets different test frequencies.

hold 2/9/8 turn on -> total clear

hold s/s turn on -> turn BEEP on / repeat step,BEEP is off

hold h/s turn on -> turn SAVE on / repeat step SAVE is off

hold keylock turn on -> turn AUTO-LIGHT on / repeat step AUTO-LIGHT off

I am pretty sure I have just the basic 94A model but not 100% sure.Date code indicate june 2001. Really dont matter to me, except the fact I have no PC port and I wish to add it.

I had seen the mod for it years past, but now cant seem to find it, can anyone here help, as well as PC cable schematic.

I tried looking through some of the files and messages here, but got lost in the multi thousand posts!

Also I have been told of a mod to remove a diode that would allow scanning from17MHz. to the 1.3G w/cell blocked. Plus keyboard entries! Anyone know if this is true?

Thanks for all help

It is the 94A version. I have found that it is possible to add the
port but I just cant find the schematic

Go to the group home page at http://groups.yahoo.com/group/pro94owners/
. Do search of the message archives. This has been answered many times.

Go to the group file section at
http://groups.yahoo.com/group/pro94owners/files . The first folder at
the top of the page is "Computer". In that folder you will find files
describing how to modify the 94 to read and write the EEPROM with a
computer, as well as ideas on the interface itself.

This only allows you to back up and restore programmed data. Until
someone figures out the data structures the 94 stores in the EEPROM,
you will not be able to alter the programming with your computer. This
is the only computer mod that I have heard of for the 94. Perhaps an
internet search engine will turn up something else.

get the Radio Shack part number 20-047. Be sure to use the mono plus in the PC/IP jack. There are many programming softwares out there that will program this scanner. You will just need a database of frequencies so you can program the 94. Best of luck

I beg to differ, their is only one piece of software that will work properly with the Pro-94B.

Scancat Lite Plus.

I beg to differ with you directly as I own a 94B scanner and use the specific cable I specified to program it. Proof is in the pudding and I have the proof in hand. The 94b has been an excellent scanner and I use it to monitor numerous frequencies with it as well as with my Pro 97B and Uniden BCT15. To further back up my evidencve please refer to the following website http://wiki.radioreference.com/index.php/Pro-94#Programming_Cables which specifically states the 20-047 cable for the Pro94.

This is true and unfortunate, and I suspect it is entirely unnecessary. If anyone here is competent with raw RS-232/EIA-232 communication and has a Pro-94B, ***PLEASE*** let the list know. For very good reason I suspect the command structure on the Pro-94B is nearly identical to the Pro-2052 and its Uniden cousins. So far the pairing of a Pro-94B with someone who can be (and is willing to be) a technical liaison has not occurred.

If you can be that person, please speak up!

Hi guysI just joined the group, I just recently was given a Pro-94 scanner from a freind of mine.What a nightmare my Pro-2050 is easier to understand than this one.I was Trunk scanning last night,it was working fine The trunk ID was showing up in display.Then I turned it off to go to bed.I turned it back on This morning and it just scans the frequency numbers.no ID,maybe i hit the wrong button accidently.How do I get trunking ID's back. or do I have to reprogram again.I downloaded a manual and its very confussing.Help

From: Dave
Topic: 4566 Message: 4570

The Pro 94 was even beyond those who were teck-noo-geeks when it first came out, more than ten years ago. I could not make heads or tails of the directions and a friend suggested someone nearby who was 'into these kinds of scanners'. I went to see him and after a week or so, he called to tell me that he had tossed his hands into the air as he could not figure out what to do.

Unless later versions have the capability of being programmed by a computer, you are going to be stuck with a great scanner and no one to set it up for you.

I took my Pro 94 back and later got a Pro 92. It can be programmed by a computer, but only a PC. So, now I have a Pro 92 and Pro 95 that collect dust and can only follow what was programmed into them by someone other than me as they were demo models at Radio Shack stores.

From: Dave
Topic: 4573 Message: 4574

Russ:

Take your scanner into a Radio Shack store. My Pro 92 was a demo model, so that tells me that someone in the store should know how to program all the different models of scanner.

Maybe, they might have everything you want for your Pro 94 already on one of their computers or a scanner in the store and can just download or clone the program to your scanner.

If one store can't do this for you, ask the sales associate to call around to other stores in San Francisco, San Bruno, or even in Oakland or San Jose, to find someone who can put the program you want into your scanner for you, and if necessary send your scanner to that store.

If a store can't program the scanner for you, they may be able to refer you to someone who can do it for you, from their computer, or clone what they have in a scanner, to yours.

There are enough stores in the Bay Area that, surely, someone can be found to help you.

Just programmed this scanner the other night. It was working fine. I turned it off and on several times, was still working fine. Turned it on this morning and get nothing, but the frequencies scanning. Press trunk, then search and still get nothing but the frequencies. There's always something coming through from Brevard County sherriff dispatch as there was the other night. I tried and tried again turning it off and on and pressing trunk and search just like the other night and still get nothing but the frequencies scanning and no Talk group I.D.'s come up. What's wrong?

Sounds like they changed control channels and your scanner does not have the new control channel programmed in. Step through the freqs and see if one has the control channel buzz.

> Just programmed this scanner the other night. It was working fine. I turned it off and on several times, was still working fine. Turned it on this morning and get nothing, but the frequencies scanning. Press trunk, then search and still get nothing but the frequencies. There's always something coming through from Brevard County sherriff dispatch as there was the other night. I tried and tried again turning it off and on and pressing trunk and search just like the other night and still get nothing but the frequencies scanning and no Talk group I.D.'s come up. What's wrong?

Has anyone heard if Brevard County, FL has changed their control channels overnight? Not receiving any of the talk group I.D.'s on the Pro-94 scanner for the past week. Was working fine about 8 days ago, getting all kinds of activity, then OVERNIGHT it's just scanning the frequencies. I've got everything programmed in OK but now I'm not hearing the noise from ANY of the control channels. What's wrong?

From: Chris
Topic: 4584 Message: 4584

Hi Folks,

Just picked up a PRO94, primarily because it is programmable and does trunking (much to learn :).

Googled myself silly and have yet to come up with a schematic for a programming cable. It would *seem* that a level translator a db9 (or usb serial adapter) and a 1/8" plug (mono? stereo?) would be about it for one?

Got piles of parts and would just as soon build one if anyone might have a pointer to what is required (TXD and baudrate / stop / parity).

Any thoughts appreciated.

Back to the manual in the interim :).

Well, that's just great. I'm sooo happy for you. However some people do have a medical condition that makes reading the frequency then entering it without switching digits around hard (not saying that is the reason here). If you don't have something helpful to say. Then say nothing instead of being rude about it.

Sorry. Definitely was not trying to b rude. I cant see scanner freqs w/o two pairs of glasses. terribly nearsighted

I have just seen a lot of people buy scanners then get in over their heads with software and cables.

Trust me --meant no disrespect.

I have a 94. Love it. U will too.

If u have NOT downloaded the 94 simple manual from internet I would recommend u do it. Says everything the 94 manual from RS does but makes it so much simpler.

Again--no disrespect or rudeness meant..

Hopefully "hdavey" stayed around to get an answer to the MOST important question from other members in the know - how to stay on the list! I never saw an actual question from this member, only the sign off. As I've said many times, the only "dumb question" is the one you never asked. We're all here to help, but this isn't "mindreader's list".

As to getting aggravated and giving up after an entire 1/2 hour, I might suggest the sparse documentation and less-than-obvious programming methods of the Pro 94/95 will offer greater challenges to one's patience than that.

I hope "hdavey" gets his answer and can stay with us. Best of luck to you!

Mike

I was hoping for a rational reply, but I guess people just buy rather than build anymore. Sigh.

The rat shack manual, assuming we have the same one, makes no mention of a cable much less shows the components of one.

I wanted the programmability option simply because I don't want to have to use that crappy little keypad to enter 1000 frequencies and options.

Actually I doubt I'd ever program in THAT many but I like things to be backupable :), only thing worse than programming in a LOT of frequencies is to have to do it again, and again, and again if something goes wrong.

Also nice to have a list to reference rather than manually stepping through on the unit itself looking for something specific.

That I can't see the display worth squat and arthritis doesn't make it any easier.

Sigh, never mind.

Thanks anyway.

> I was hoping for a rational reply,

It's an oft asked question. It should be in an FAQ posted in some inaccessible place somewhere.

> but I guess people just buy rather than build anymore. Sigh.

Wait for it . . .

> The rat shack manual, assuming we have the same one, makes no mention

Then assuming it is the actual manual that came with said scanner - there will be no build to be done as you have a model 94A which ONLY programs via the fingering of your machine (I had to).

The 94B is programmable via ScanCat (lite?).

> Also nice to have a list to reference rather than manually stepping

Another familiar question. The RS manual is nigh unto useless. I lurked here for a few months and Googled a much better set of instructions (as well as local freqs) all of which I have lost as I really haven't had any use for any of it since I got the damned thing programmed.

I don't really mean it that way. We have quite a fond relationship actually. Should you care to Deja the past posts you'll find that I have a dual 9 volt powered 94A as opposed to the stock 6 volt unit.

Mods, wow.

> That I can't see the display worth squat and arthritis

I believe that RS will program scanners for you provided they were bought new at the retail stores. Could be wrong, probably am.

> Sigh, never mind.

Dammit!!! All that reply for nothing.

Cheers,
D.

Hello. I bought my pro94 a couple years ago for myself for chrsitmas. At the time my local town was not on a trunked system and i LOVED my scanner...then they switched to a much larger shared trunked M-type 2 system.
Well i have had nothing but problems trying to figure out the trunked settings and well i had gave up till a couple days ago..I plugged it in, Cleared it. Started right with entering my trunked codes for my area. It worked. Started trunking and i was able to folow the mess of a manual to enter my talkgroup ID's. It was working PERFECT! Was hearing only my town again! It was aswome! Then i sat it down and left it on. I went to work and came back 6 hours later and NOTHING . It wasnt trunking. Just showing it scanning the trunked freq's but i wasnt getting anything on it. If i press the trunk button and turn off the trunk scanning and just scan the freq's normaly i hear plenty.
I have cleared it like 5 times and reentered all my codes everytime. I have looked for more codes and i cant get anywhere.
Something thats confusing me is this.
On my screen when i press the TRUNK button, Above the channel # it says HYPER.
Now i am 98% sure this is something new. I dont need to be told how to turn HYPER on/off in LIMIT search because i have done it a million times and it works fine as far as being turned on and off in LIMIT mode but as soon as i switch to TRUNKED ...Its saying HYPER on my screen again. After a reset its saying HYPER ..Like its a defult setting. If so then its not new and most likely not my problem but im honestly thinking that its got something to do with it because i cant seem to get it to turn off.
Does anyone have a fix to this issue? I am so very confused...Does yours say HYPER during a trunked search ??

4595. Please help me program my scanner.

Have you checked radioreference.com to see if your city is listed? Since you did not note where you are, you are on your own for the time being, but this would be where to find the basic information you need.

The Pro 94 was one of the most baffling scanners ever devised. So much so that 'only a three-year-old' could figure them out. Seriously, I returned mine to Radio Shack when a 'scanner guru' could not get it going. I that the first model. Since, many people have figured out how the thing works, and at least two revisions in the scanner itself have been made.

Good Luck

Carmine:

I had to look on Google Maps to see where New Paltz is. Since there is a SUNY campus there, see if there might be a ham radio club. Or there might be a ham radio club in the area, such as in Poughkeepsie, which does not appear to be all that far away. If there is one, perhaps a member lives near you and is familiar with the Pro 94 or other similar scanners and can help you get going.

You have the information I suggested you seek on Radio Reference. Keep that site bookmarked. That way if someone can come to your place, or you can take your scanner to theirs, you can get it programmed.

Dave

I may be able to help. I'm in Poughkeepsie and have used a PRO-94 for 10 years.

First you might want to refer to one of the pages on Mark's Scanners website - depending on which model 94 you have. If you aren't sure which either page can tell you (How do you know if you have a Pro 94, Pro 94A, or Pro 94B?).

http://marksscanners.com/94AB/94AB.shtml
http://marksscanners.com/94/94.shtml

First thing is to get the New York Communications Co. Illinois Mtn. EDACS trunked system programmed.

Press the PROG button
Press the TRUNK button
Press the number key of the bank where you want the system to be - try 1
Press either the up or down arrow button until you see Ed
Press the enter button SVC/E
Use the number keys to enter the first frequency. In EDACS systems the frequencies must be entered in the specified order (Logical Channel Number or LCN order)
The first frequency is 854.4125
After using the number keys to enter the frequency press the SVC/E button
Press either the PROG button or the up arrow button to move to program the second frequency
Do the same for each of the 15 frequencies (Enter frequency with number keys; then SVC/E; then PROG)
The remaining frequencies are (be sure to enter them in this order):

860.8875
858.0375
860.1125
860.7125
859.1125
858.1125
856.1125
857.0375
858.6375
855.3125

859.8875
855.9625
859.7875

When you have entered all 15 frequencies press the LIMIT/SRC button
The scanner should begin searching the system and you should receive all the transmissions carried on it.

Be sure the radio is set to display EDACS talkgroups in the Agency-Fleet Subfleet (AFS) mode. You switch between AFS and Decimal mode by pressing the SVC/E button. I've found AFS to be the better mode.

You should see talk groups appear on the display as the radio searches.
New Paltz Police use the talk groups:

06-021 Patrol
06-022 Emergency
06-025 Detective
06-016 SUNY New Paltz Police simulcast
06-017 Townwide

There are probably others that I'm not sure about such as 06-023, 06-024 and so on.

While searching you can press the HOLD button when a unit is talking to stay on a talk group - such as 06-021.

You can also try an Agency search to limit what you receive to Ulster County talk groups.
Press the number keys 0 and 6
Press the MON/CLR/ . button
Press LIMIT/SRC button
You should hear Marlboro on talkgroup 06-030, Lloyd on 06-066, Ulster 911 on 06-037, Sheriff on 06-064 in addition to New Paltz.

To limit your search to the New Paltz Police try:
Press the number keys 0 and 6
Press the MON/CLR/ . button
Press the number keys 0 and 2
Press the LIMIT/ SRC button

This should get you receiving your PD. Then you can try programming talk groups into banks. If you'd like to hear this side of the river, Poughkeepsie City PD patrol talk group is 01-081.

You might also try the New York area web page www.nf2g.com/scannist in addition to Radio Reference for local information.

Ok here is what i am finding. I live in a sub of Dayton Ohio. (West Carrollton, Ohio) My local police are on the "Montgromery County Motorola Type 2 trunked system.

http://www.radioreference.com/apps/db/?ctid=2096

In my earlier attempt I was programing my scanner with the codes for the trunked system of montgomery county that came in the book with my scanner. When looking around for a fix to my problem i reprogram it with the codes off the raido refrence website...I notice after comparing the codes on the site with the codes in my book that they had some different codes on the site that wasnt listed in my book...
Please remember that just a few days ago i had this scanner actualy trunking with the codes from just the book. Left for work came home and it wasnt picking anything up and was just scanning the codes and not actualy "trunking".
So anyways i reprogram with the codes on the radiorefrence site and guess what? IT WORKED AGAIN! It started to trunk scan without any problems. I once again programed all my talk groups into a ID list and listened to the scaner for well over a whole day...I unplug it for a while this evening and when i plug it back it it wont enter a trunk scan! Its just running thru the codes and not picking up anything. If i hit manual i can hear them talking...press the trunked button and NOTHING. The HYPER button thing im guessing was just a normal setting that i never noticed because when you are trunking you dont see them icons...so i only noticed them because the scanner wasnt trunking...
I hope this helps point someone to my fix. Im guessing that my question now is this.
First..can you only access the programed ID list if the scanner is sucessfuly trunking?
AND
Second. If i STILL have an imcomplete list of codes using them from the site and the book...Would the scanner still trunk sometimes without having ALL the codes? Could it be that the trunked system of my county has another code that they use sometimes that i for some reason dont have? If they had another code and used it and i didnt have it would that stop my scanner from trunking? and if so is it likely that it would happen 2 times? could i be missing that many codes? I had it trunking 2 times in a week...So someone please try to explain whats going on ?

1st question.

When you press the Trunk button are you then pressing the SRC button? This is what I have to do to get my scanner to go into trunk mode. I then press the larger SCAN button to enter the mode for my talk groups that I have programed in. To go out of id scan to normal trunking press the SRC button again.

2nd question.

You do not have to program all the codes to work. You program only what you want to listen to.

I hope this helps.

Now wait a minute fellas.

I think we may have a misunderstanding here.

"tormentedvideos" -- when you say "codes", do you mean "talkgroup id's" or do you mean "frequencies"?

"codes" is a confusing word in the world of scanning because people use it to mean more than one thing. I try to avoid using the word "codes".

An example of a talkgroup ID would be:

3792 Highway Patrol Car-Car

An example of a frequency would be

856.4375

That being said -- I THINK you mean "talkgroup id's".
If that is the case, I would do exactly what Aubrey is suggesting. Press TRUNK, then press SRC. What this does is allows you to hear ALL the talkgroup id's. That will verify that it's able to trunk and pick up "talkgroup id's" and basically work properly.

THEN, if that works, then you should be able to just program in the talkgroup id's that you want to listen to. You should be able to switch between the two modes.

Press TRUNK.

a.. To make the scanner stop and play audio for ANY talkgroup, press SRC while the dashes are showing for that system.
b.. To make it stop on only the talkgroups you want to listen to, press SCAN. But if the people you are monitoring start using a new talkgroup ID, you will NOT hear this because it's not in your list. You WOULD hear it however in TRUNK SRC mode.

The word "HYPER" is for "HYPERSCAN". If you see "HYPER", you're not trunk-tracking -- you're only conventional-scanning, like the old-fashioned scanners.

Personally, the system that I listen to isn't too busy, so I just LEAVE it in TRUNK SRC mode. I do have some talkgroup ID's programmed if I ever want to quiet it down but still hear emergency traffic, but I seldom use that feature. I DO lock out certain ID's that I don't want to listen to, but everything else comes through.

This thing is crazy lol. I cleared it once again, Added my newest list of freq's and its working as it should. I have added my list and everything into it again so i guess now we just see what happens.
Aubrey, Do you have a updated list of the freq's that you have in your trunked bank for montgomery county? And also ...Are you using the orignal antennia or have you upgrade it? I get alot of hissing sounds and am curious if maybe i need to think about a new one.
Have had this scanner for a good while now and just now figuring it out. went greek to me when all my little towns i listen too went to the trunk system last year

4604. Montgomery County Ohio Trunked Codes

Yahoo group: pro94owners
Date: 2009-11-24 11:59:58 UTC
From: tormentedvideos
Topic: 4604 Message: 4604

Here is the list of codes that i have...Not all collected from the same location ..Just a list i have pulled together from scanohio and radiorefrences along with the book that came with my scanner.
With these codes at this moment i cannot tunkscan.

866.0625
866.1750
866.2625
866.3125
866.3750
866.5750
866.8000
866.8500
867.0750
867.1000
867.1250
867.1625
867.3500
867.6250
867.6500
868.2000
868.2500
868.5000
868.5750
868.7500
868.8000
868.8500 (this one is all noise and must be locked out)

with these codes i can here the people talking when i hit trunk key but the screen just shows it to be basicly scanning the frequiences and not doing its little trunked thing. I cannot access any IDs.
I just cleared scanner and readded all the above with no luck

badger,

Programming your pro94 should be done by hand. Start at 29Mhz and go up from there. Keep a log of what you hear and you'll have a blast. After all how do you know that the frequencies the computer programs are ones that you can hear in your area? Going step by step and listening is very fun. Good luck!

Hi All,

I have a frequency database (Scanning.mdb) of over 2000 frequencies, yes I know you can find some on the internet, I have try to put them all in one database. Email me if you need a copyy at glenn_webber@.... All I ask is that if you have any old coins or note you can send them to my son, as he has started to collect them from all over the world. Send them to P.O.Box 21255 Helderkruin 1733 South Africa.

Enjoy Glenn

Check the jack. Make sure that it is clean and hasn't bent where it isn't make contact. If the jack is good, then check the charging circuit.

4617. Low audio.... :-(

Yahoo group: pro94owners
Date: 2010-04-29 01:09:59 UTC
From: ka5lqj
Topic: 4617 Message: 4617

Hi,

I've had my Pro -94 (plain) for some years now. I can't tell you the number of hours of enjoyment and excitement I've had listening to the all the local Part 90 agencies within a 100 mile radius from my home and when I'm "mobile" or even "portable". Unfortunately, for some reason, the audio volume is getting lower and lower. I've tried a new speaker from another R$ scanner. I've tried other exterior speakers, but nothing seems to help.

Right now, the local fire, police, and etc are changing over to the new, 700 MHz, FEMA band and using Motorola "batwing" radio's. I'm not going to be able to afford a new Uniden 996 digital scanner anytime soon, so I'm just listening to low-band (30-50mhz), hi-band VHF (150-172mhz) and lo-band UHF (406-470mhz) traffic, but ONLY during times of severe weather. Yes, I'm a NOAA-trained Sr. Storm Spotter of 28 years. I'm a general class and you can usually catch me on 17, 10, and 6 meters ssb and fm.

Now, does anyone have a 'parts' Pro 94 they want to get rid of? I'm on disability and I don't want a new one. Although, if you have a "B" model, I'm interested, LOL!

GOD BLESS,
73,

Don/KA5LQJ

Hey Guy's,
I just picked up this scanner and I wanted it to monitor ham freq's to start learning. I would like to get my technicians license. My question is this scanner starts at 29.6. It won't go down to 29.000. I have went through the manual many times and I can't figure out how to make it start at 29.000 in the service band search. Any suggestions? Thanks!

The service search feature won't scan the 10 meter band below 29.6 MHz since the scanner can only receive FM there. All of the FM activity (with the exception of repeater inputs) will be between 29.6 MHz and 29.7 MHz, so there isn't any reason to scan the lower part of the band, thus it isn't included in the service search.

You can scan the range using a limit or direct search, however. For the limit search, press PROG to enter programming mode, then press the LIMIT button. You will see "Lo" on the left side of the display. Enter 29 and press E. Press LIMIT again and the display will show "Hi" on the left. Enter 29.7 and press E. Now press either UP or DOWN to begin searching between those two frequencies. For the direct search, press MAN to put the scanner into manual mode. Enter 29 and press UP (do not press E.) The scanner will then scan all possible frequencies starting at 29.0 MHz and won't stop unless you press HOLD to pause or press DOWN to reverse the direction of the scan.

Almost all of the FM activity you'll hear on the HAM bands will be in the 2 meter and 440 MHz bands, and nearly all of that will be on repeaters. Have a look here to find a fairly complete listing of repeaters in your area:

http://www.artscipub.com/repeaters/

You'll have the best luck programming the local repeaters into channels and scanning them rather than using any of the search methods. The searches spend a lot of time scanning radio spectrum that isn't in use at the time and it makes finding activity rather hit and miss. Scanning pre-programmed channels allows the scanner to look for activity only where you expect to find some.

Good luck with your exam!

With sunspots (maybe) startign to come back and the summer Es season upon us, I'm hearing reports of people working the 10 Meter FM repeaters. However, anyone will be hard-pressed to hear one on the small standard antenna provided with the scanner - especially indoors. To hear 10 Meter activity, it would be best to use a decent 10 Meter antenna (dipole or vertical) outside and in the clear.

Thanks for all the great replies! I am just getting into ham, so I have a lot to learn. I have been doing a lot of Google searches and there is so much info out there.

Any suggestions on what radio to get for a beginner, (for a reasonable price)?

Again, I appreciate your help!

Jim

>
> Any suggestions on what radio to get for a beginner, (for a reasonable
> price)?

That's a nearly impossible question to answer, unfortunately.

If I had to answer for the ideal best beginner radio at the most reasonable price, I would recommend a Yaesu FT-857. With that radio you get access to nearly all of the ham bands with all modes being available. You won't find yourself needing new hardware if/when you upgrade license classes (other than antennas and coax cable.) It retails for about $750 and you'll also likely need to buy a power supply which adds another $100.

But I do understand what you mean by reasonable price. Even if you have money burning holes in your pockets, it's hard to spend a large amount of money on a new hobby you might not keep up with. So I'm going to make two suggestions for keeping costs low and the fun high.

The ARRL gets a lot of criticism for recommending a 2M FM HT as a first radio. I think it's the ideal radio for this purpose, myself, as long as the buyer understands its limitations. You'll basically use it for talking through repeaters and it isn't a big monetary investment. However, unless you have a lot of local repeater nets that interest you, you'll get bored with it very quickly.

So, I recommend adding another inexpensive radio for either 6 or 10 meters. Technician class licensees have full priviledges on 6 meters and restricted priviledges on 10. Both have very interesting propogation characteristics this time of year.

For 6 meters, I would look for a used MFJ-9406. It's a great radio, but way overpriced if you buy it new. It covers 50.0 to 50.3 MHz on SSB and also CW if you install the optional CW module. 6 meters can make some serious long distance contacts this time of year.

For a 10 meter radio, I would try to find a NIB Radio Shack HTX-10. There are thousands of them out there. Try not to pay more than $100 for one, even it the box has never been opened at all. These things are great for introducing people to HF radio.

And of course, put up an outdoor antenna for whatever you buy and use GOOD quality coax to feed it. A simple wire dipole will do for either 6 or 10 meters when band conditions are right.

4643. Programming Software

Yahoo group: pro94owners
Date: 2011-01-31 19:13:33 UTC
From: Dave
Topic: 4643 Message: 4643

Does anyone know of open source software that will work with Mac OS 10.4.11? Scanners I have are all Radio Shack: Pro 92, 94, 95.

There is software that runs on a PC, but it is useless. I have the Bob Parnass software for Mac but all I can do is read what I have in my scanners, not do any changes or add/delete anything.

All my scanners were programmed at the store, and there have been many changes since. I have no need to listen to tree trimming, sewer, or waste collection crews, nor which light rail train is waiting until a single track is clear so they can move between stations.

Thanks,

Dave

Hello All,

I want to be able to set my scanner up to be able to turn on or off some dispatch systems.

I had it set up for South Comm in South King County. Then I added the Seattle freqs and scan ids. Because some times I go into the city and want to be able to turn those on.

After I added the Seattle stuff it does not work right. I get some random stuff from Seattle coming through.

It looks like I should be able to set it up to have the Seattle scan Id's on bank 2, then I should be able to turn that on when I need it. Is this right? What am I missing?

Thanks
Earl

Hi:

Here is a possible solution to your problem.

I am a Windows user myself, however here is a link for running Windows (XP) on Mac Hardware. Possibly a Google search will reveal other flavors of Windows for Mac.
Once you have a Windows partition on your Mac, then you should be able to open Windows and run Windows programs compatible with your Windows version. Worth a try.

Scanner programs written for Mac are few and far between, it would seem.

From: Bob L
Topic: 4659 Message: 4659

We are in our 70's and have owned a pro94 for years. The only frequencies we have in it are the 10 non-trunking midical frequencies.

We have tried to use the trunking feature but it is too confusing.

Is there anyone in the Reno, Nevada area that can be hired to program this thing.

Bob and Margie

Topic: 4661 Message: 4661

Good Evening,

My name is Sgt. Ronald Couvillon. I'm with a small police department in Northwest Louisiana, not far from the Arkansas-Louisiana-Texas lines.

There are 10 officers in the department, two on each 8-hour shift, a Major who is the head of the police force, a Lt, who handles burgulary, vice, and drug investigations and two, part-time, "back-up officers" in case the other officers have an "emergency".

The department owns a Radio Shack Pro-94 (plain) and recently upgraded to a Pro-95. We bought the 95 from another police department in another state and they have it loaded with CB, Ham, low-band FM, Hi-band FM, lo-band UHF and a bunch of 800 trunked police systems.

None of us know how to program the 95, but I understand that there are "buttons" you can push and hold down, then turn the scanner "on" and it will totally erase all the programmed frequencies including the pre-loaded ones. I've mashed every combination and no luck.

Does anyone know the 'code' to make it do this? Otherwise we're stuck
with Arkansas frequencies. :-(We had hoped to program it and put in the alpha tags for ham repeaters and other police & fire departments.

The antenna is on top of a 200' tower ith lights and fed with 3/4" hardline. It will stay at the station.

Our frequencies are 155.31, 155.37, 155.55, and 159.03 and the callsign is KKB-960.

Since we are a small department and all looking to get our ham tickets, anyone of the fella's might come on here and ask a question,
but sign his name and rank.

Remember to buckle up and don't speed. If you can't do the 'TIME'
then don't do the "CRIME"

Major Robert Johnson

Hello all,

I try to reset my Pro94 by pressing 2 and 9 keys when turning on the scanner.

When turn on, LOAD flash on the display followed by 22 222 .... Since then, the scanner was stucked in a strange trunking mode....

Any help is a good help, because i cant get out from this trunking mode.

Tks,

Q2

Hmmmmmm, that's kinda strange. Generally if you press 2 & 9 together and hold them down, THEN turn on the scanner, the display reads, "clear". Are you doing this? It could be one of the IC's has gone bad.

What would be real neat is an SDR scanner, LOL! Make it the size of
a pocket calulater and plenty of audio. Then make it capable of hearing from 12 KHzs up to 24 GHz - CW, AM, LSB/USB/FM/PM/& digital.

I hope you can get the 94 fixed. They are great radios for general
monitoring Ham, Part 90 Fire/Police, & EMS. I haven't tried mine on
Air or Rail yet.

GOD BLESS,
Sgt. Ron

This is the best I can offer. I read it and understand it, but at same time
it isnt all that easy to explain for me. While you may not have many
frequencies to punch in, you may find that the computer interface is worth
the investment, as you have a lot more ease at programming.

You may find you desire to listen to all neighboring counties, especially
usefll during storm season, and you may desire to keep some local amateur
frequencies in use in your area, particularly ARES/RACES/ACS groups S&R
groups, Road crews, and news media. I mention these after being in Emergency
Management for a little while now, and recognizing how useful information
is when you get it quickly and unfiltered, so listening to these groups
tends to alert you sooner then most any news outlet. Of course you always
have your other Public Service Frequencies for this also.

As for the Hams, great, we are always looking to share our knowledge with
new people.

Good luck, and do ask questions, even the ones that seem dumb, like OHMS
law for power!

Probably not too many PRO-94's left out there, although they are a very good radio, if somewhat of a bear to program, since they don't accept Control Channel only programming on Motorola. Since the 94B's can be programmed from a computer, it does speed things up. I once programmed a PRO-94 for a friendfrom the keypad. Once you get the hang of it, it goes pretty fast. I remember having to disconnect the antenna while programming, since this particuar radio, at least, kept wanting to go into scan mode when it detected a signal. But once programmed, it worked great.

This goes way back to my first exposure to EDACS in about 1988 (it was called 16Plus back then), I believe the first tone is for squelch tail elimination (STE) at the repeater site receiver. The rest of the beeps are to hamper and annoy scanner users. There's nothing wrong with your programming. The only workaround that I know of would be to modify the scanner hardware to detect the beeps and resume scanning. Or get a newer scanner.

Yes, it is a law, but I don't think it applies in your case. I heard some people breaking into businesses around town on my scanner, and the cops didn't seem to mind that I called them about it and monitored them for them. As long as it helps them, I'm pretty sure they won't care, unless there is a local law against it.

People call in to help out the police all the time. Most departments appreciate the help, some do not.

On a side note, I can't believe that I'm just now getting this message in March...

You will hear the beeps on an EDACS system and even if you didn't, there is no guarantee that you would hear the next transmission because it is a trunked system. The computer assigns the next transmission to the Talkgroup being used but if the frequency is busy it could be another frequency. Some systems have 28 different frequencies. You need a Trunk Tracker Radio or if you have one, it's not programmed correctly to recognize a trunked system. Additionally when you enter an EDACS system, the first frequency you input must be on Channel 1, not 0. When those freqs are in then you can enter the talkgroups. Radio Reference allows for downloading all of that if you have the supporting software and cable and your scanner can do that. The tones actually have nothing to do with scanners and if programmed correctly, you won't hear them anymore.

On a Motorola system you will not hear the beeps because EDACS and Motorola handle their information differently, that is the info that tells the radio what to do. However the same holds true on an Motorola system in that every transmission can be on a different frequency. The difference is that the talkgroup is the same. Each of these systems is controlled by a computer. For instance, the MARCS system developed in Ohio is used by multiple state agencies and a lot of local agencies. All use the same frequencies but have their own separate talkgroups. So you can be standing in Cleveland and talk to someone in Dayton as long as they are on the same talk group. One other thing, many systems like MARCS are digital systems meaning that if you buy a new scanner to hear them, make sure it is digital or you won't hear very much. A digital scanner will pick up non digital traffic, but a non digital scanner won't pick up digital traffic. They will both pick up conventional traffic.

This goes way back to my first exposure to EDACS in about 1988 (it was called 16Plus back then), I believe the first tone is for squelch tail elimination (STE) at the repeater site receiver. The rest of the beeps are to hamper and annoy scanner users. There's nothing wrong with your programming. The only workaround that I know of would be to modify the scanner hardware to detect the beeps and resume scanning. Or get a newer scanner.

Every state is different. My suggestion has always been to look for an anonymous tip line. Almost every county in the US has one and take care of it that way. RadioReference.com has info about this type of inquiry, I believe.

Happy New Year.

I heard some "incomplete" information on my scanner yesterday. I wanted to call the PD to offer help, but my father said it's illegal to discuss or divulge information obtained from monitoring the Department's frequencies. Has anyone ever heard of this law/rule before?

Thanks, RR2000.

The reason for this is that it only allows 50 channels per bank. If you have more, simply put them in another bank.

4699. Newb questions

Yahoo group: pro94owners
Date: 2012-12-03 05:24:34 UTC
From: king.nozmo
Topic: 4699 Message: 4699

Hello,

I'm thrilled to have stumbled upon the group. I am returning to an old hobby after a 20 year absence so to me, scanning in general is basically new all over again.

That being said, I heard pretty good stuff about the Pro-94 so I took a chance on eBay and picked up a supposedly good working unit for around $40. It hasn't arrived yet and the seller couldn't tell me if it was a 94, 94A or a 94B but they did mention a PC interface in the listing and the picture of the label on the back of the radio clearly shows a catalog number of 20-524 [B]. I've heard this indicates it is in fact the "B" model with the PC/IF connector and externally programmable. Can someone confirm this?

I've also heard that the original antenna is basically useless but I live within a large metropolitan area in Silicon Gulch and wondering if anyone could recommend a decent replacement. I'm looking forward to getting my hands on the new toy and digging through the group for lots of goodies.

Thanks,
-noz

4701. Re: [pro94owners] Newb questions

Yahoo group: pro94owners
Date: 2012-12-03 11:46:39 UTC
From: Paul Markham
Topic: 4699 Message: 4701

Yes, the PRO-94B can be programmed from your computer. I once programmed one for a friend using the keypad. Very time consuming and I had to disconnect the antenna, on this particular radio at least, since it kept wanting to do it's own thing while I tried to program it with the keypad. Scancat.com has software for this radio:
http://www.scancat.com/scancat-lite-plus.html Hardly anyone speaks well of Radio Shack's software.

Radio Shack or scannermaster.com have some very good replacement antennas available.

While the PRO-94B was a very good scanner for it's time and will be a good starter scanner, you will find, depending upon what you want to listen to, that it is sorely lacking for much of todays listening. Some of the drawbacks are lack of updating for rebanding, no narrowband FM and no LTR trunking. More info:
http://wiki.radioreference.com/index.php/Pro-94

Rebanding affects the frequencies between 866 and 869 mhz. They have been moved 15mhz lower to the 851-854 mhz band. This means you will not be able to copy some or all of the frequencies of certain (but not all) 800 mhz systems, depending on how much rebanding has affected them. The reason for this is that the control channel of the system being monitored will have your radio calculating the wrong frequency to switch to, since the firmware in your radio is not updated (and cannot be).

Narrowband FM is reducing the deviation of the carrier to 12.5 khz, or equivalent. What this means in practical terms is less volume on a given frequency - for those frequencies affected and that stay analog. Turning up the volume and holding the radio a little closer to your ear will remedy this in the short term. In the long term it also means adjacent channel frequencies (drop-in frequencies) interfering with the primary frequency, as the drop-in frequencies start being used. More info:
http://transition.fcc.gov/pshs/public-safety-spectrum/narrowbanding.html
Narrowbanding affects the 150 to 470 mhz band, as the T-band -- 470-512 mhz, was exempted from this requirement on April 26, 2012. This does not mean there is no narrowbanding taking place in the T band. However, this band is only being used in the largest US metro areas. Narrowbanding starts on 1/1/2013, and theoretically everyone affected will have been narrowbanded. Good luck on
that, since many smaller users either don't know about narrowbanding, or don't care. Should be fun when the FCC fines start happening.

An easier to read manual for your scanner can be found at marksscanners.com:
http://marksscanners.com/94AB/94AB.shtml

As the monitoring bug continues to bite you, you will definately want to go to a more modern scanner. Good luck as you return to this fascinating hobby, and welcome back.

4703. Buttons Not Responding

Yahoo group: pro94owners
Date: 2012-12-04 22:30:32 UTC
From: Darryl
Topic: 4703 Message: 4703

I am having a problem, with the Pro94B. I have had the scanner, for a while, but I can not figure out, how to solve this problem. The problem is, for some reason, the numbers buttons 1,2,3, are not working. whenever I push those buttons nothing happens, including no beeps. All the other buttons are working. I have searched the Instruction manual, and the Internet for an answer, but so far nothing. I tried to reset it, by using the numbers 2 and 9, but since the #2 button isn't working, that doesn't work. Thanks for any help in advance.

Have you tried disassembling the radio and cleaning the keypad internally? Depending on how the keypad is designed it may also have a dirty connection between the keypad pc board and the main board.

From: Mike Engler
Topic: 4703 Message: 4705

Hi, I had the same problem with the up/down buttons, it might be the contacts inside gone bad...what I did was *very* carefully took it apart to get to the pressure sensitive contacts, and put a small piece of aluminum foil inside on the rubber contacts, a very small piece, just enough to cover the little conductive black thing, then I cleaned the board gently with a bit of alcohol, and put it back together, making sure the foil stays right on the individual number. It worked fine after that. You have to be VERY careful not to mess anything up, and opening the thing probably voids any warranty, but it does work. Hope this helps.

Check me out!

I did the same thing once to a Yaesu hand-held transciever, except I used a tiny dot of supre glue to hold the foil in place on the rubber contact. It does work.

Try cleaning first.

If you find the area under the rubber membrane
oily, you should clean both halves thoroughly,
but carefully with alcohol and q-tips. The oil
is skin oil that has seeped through the membrane
over time, and is NOT conductive. Once saturated
like this, it will keep happening, but usually at
slower rates. Saved MANY dead keypads like
this. 70% alcohol works ok if you immediately
"dry" the area with a fresh q-tip (the remaining
30% is water). 99% alcohol is more aggressive in
cleaning, but should be used carefully on the
conductive rubber dots. 99% is available at
Safeway grocery stores in the first aid area. It
will do no harm if you 'polish' the circuit board
(only) with a dry q-tip to remove any possible residue.

A small dab of conductive paint on the black
rubber contact also works well. Can be found at
most decent electronics suppliers.

Alchohol has a tendency to dry the rubber and strip the carbon from the contact. I have used alchohol in the past successfully, but I prefer to use ammonia because it's kinder on the materials. Some rubber driver refurb solutions for tape decks, etc., have ammonia as a component (I am told).

>
> I am having a problem, with the Pro94B. I have had the scanner, for a while, but I can not figure out, how to solve this problem. The problem is, for some reason, the numbers buttons 1,2,3, are not working. whenever I push those buttons nothing happens, including no beeps. All the other buttons are working. I have searched the Instruction manual, and the Internet for an answer, but so far nothing. I tried to reset it, by using the numbers 2 and 9, but since the #2 button isn't working, that doesn't work. Thanks for any help in advance.

First and foremost I want to thank the Manager for the creation of this group and for everyone that has posted and made this group come alive. I came across this group after coming across a manual for the Pro94, which had a link too this group.

A little about myself, My name is Sarah and i'm located in Salem, Oregon. Growing up my dad always had a scanner going but i never was too interested in it at the time. As i've grown i now have an interest in law enforcement, fire protection, ham radios and such. I recently was given a scanner (Pro94A) which I have fiddled around with. I easily learned how to program frequencies in the radio, but it wasn't until yesterday that i discovered it could do so much more. (I'm so thankful i was able silence that annoying beep each time i pressed a button) What i'm trying to know teach myself is how to program Talk Ids, with a a certain frequency. I seems overly complicated at the moment, but i'm hoping that someone from the group may be able to explain it in a way that's understandable.

Ill be going through the postings for now with the hopefullness that someone else may have had the same difficulty. Thanks in advance for all your help.

Sarah there is a program know as Scan cat which allows you to type in talk IDS with the frequincey you enter. your scanner plugs in via a USB cabble that came with your radio.Pretty simple straight forward program to use.

I definitely recommend programming the radio via a computer (a cheap serial to 1/8th inch phono plug will work...but won't be bi-directional).

If you ebay a programming cable and find the free software online, you can program the radio much more quickly.

I am not sure what Salem is running for their police/fire but I know the radioreference.com site usually has very complete information.

Welcome to the hobby!

From: Scott Van Aartsen
Topic: 4721 Message: 4723

I realize you may not be interested, but just a reminder -- there's much more a scanner is capable of listening to than just police and fire calls.

Digital is a problem for older scanners. So is rebanding if your area has Motorola trunking. But if it's analog narrowband; wideband scanners will still work. You may need to increase the volume, but they work fine. The signal-to-noise ratio seems a little less -- that is to say with a narroband signal on a wideband scanner, there may be more hiss, but I've been using an ancient RS scanner and it picks up the narrowband stuff (as long as it's analog) just fine.

The other issue you may run across is less signal. You may need a better antenna or a pre-amp to get signals for which you didn't used to need such things.

Sorry -- maybe you want to get rid of them anyway -- just thought I'd let you know in case you didn't. Plus, if you still want to sell, it helps buyers to know that your scanners are far from worthless.

Topic: 4725 Message: 4726

the pro94 won't work for BCP OR MCP for ATCS,this is on narrow band,i had a pro 94 and you can't enter 4 numbers after the dismal point only 3 numbers so you will only get noise.

4732. Need info on Antennas

Yahoo group: pro94owners
Date: 2013-04-18 01:51:17 UTC
From: wolf368
Topic: 4732 Message: 4732

I have a Pro-94A and have it programmed for a couple of things.
I have our local trunk system (Motorola II 800mhz)
I also have VHF-Hi freq's in it.
I live in a High-rise complex and signals are somewhat weak in VHF-Hi band.
So, my question is: What is the best antenna to buy that will boost or improve signals in the VHF-Hi band ??

4733. Re: [pro94owners] Need info on Antennas

Yahoo group: pro94owners

From: Chris Robinson
Topic: 4732 Message: 4733

800MHz is UHF not VHF so to clarify, which are we discussing? As crazy as it sounds, I found a standard office paperclip straightend made an excellent antenna for 800-900 MHz. Otherwise I would suggest the use of a pre amp. How high above the city are you?

ok so then cut yourself a thin wire or expose about 20 inches of center of
coax and use as a quarter wave otherwise I have also taken a section of
wire about 19 inches long and wrapped and secured tightly with
small zip-tie at base of BNC, creating the other half of the dipole antenna

4740. unpacked my old pro-94

Yahoo group: pro94owners
Date: 2013-04-19 18:17:04 UTC
From: Tim
Topic: 4740 Message: 4740

Greetings group:
After years in a box today I unpacked my old pro-94.
Geeeeez, I can't remember a thing about how to use this.

On top of everything else, looks like ALL of the !@#$% frequencies have been zeroed out.

So, first question...
Is there ANY WAY to restore factory defaults? I seem to recall that this thing came with a bunch of very useful frequencies already stored in.

Second question would be...
Does anyone know of a good website to go to in order to get Elk Grove Village IL (60007) frequencies?

Hey! I just pulled mine out, too!

I'm pretty sure there is a reset. I can't remember what it is off hand, though.

As for frequencies, the first place to look would be radioreference.com

Greetings.

An easier to read manual: http://marksscanners.com/94AB/94AB.shtml

Reset: To reset the scanner,turn off the scanner. While holding down the 2 and 9 keys, turn on the scanner. CLEAR flashes for about 5 seconds as the scanner clears its memory.

Note: Do not turn off the scanner again until CLEAR stops flashing. Otherwise, the scanner might not clear its memory properly.

Happy reading.

Paul

Ok... yes... but that just sets everything to zero.
I was hoping to restore to factory defaults....which, somehow(??) would restore all of the pre-programmed frequencies back into memory.

Is there any way to do that?

tm

You frequencies were probably entered at the store where the scanner was purchased. Once you reset it, they are gone. As already mentioned, look on radioreference.com for frequency lists. Here is a list of keyboard tricks that are mostly useless to ordinary mortals like us:

I haven't reset it. After I tried some of the other mods, it went back to normal. However when I tried this one it stayed in that mod. Just to clarify; it's the mod where you press the 2/9/hold buttons, the turn on and it scans 144-153.98. I tried other mods after this, and it then goes back to this mod. Would doing the total clear mod solve the problem, or is that the same as reset?

Scanner Reset Contents
If the scanner's display locks up or stops operating properly, you might need to reset the scanner.
  Note: This procedure clears all the information you have stored in the scanner. Before you reset the scanner, try turning it off and on to see if it begins working properly. Reset the scanner only when you are sure it is not working properly

To reset the scanner,turn off the scanner. While holding down the 2 and 9 keys, turn on the scanner. CLEAR flashes for about 5 seconds as the scanner clears its memory.
  Note: Do not turn off the scanner again until CLEAR stops flashing. Otherwise, the scanner might not clear its memory properly.

It would seem that you will have to re-enter your frequencies, etc. manually, if you did the 2/9 thing. Unless you have the PRO-94B and you programmed it with a computer and you still have your programming saved on the computer and have the serial cable etc., then it's the keyboard for programming since the scanner now is 'factory fresh' - that is to say no user programming present. Sorry.

Paul

Maybe doing 1/9/Hold again will toggle it out of that mode.

We have a Pro-94 at the office. I cannot figure out how to get it to simply scan ALL frequencies. Any help would be most appreciated.

You would have to program in any freqs that you would want scanned (via the saved banks). Otherwise you could search ranges of frequencies....

4760. Weather Band interference

Yahoo group: pro94owners
Date: 2013-07-23 10:13:29 UTC
From: wrhugh
Topic: 4760 Message: 4760

I had an old pro-91 and would get interference from the weather service band within 15 miles from my town. I just purchased an almost new pro-94 and its doing the same thing. I also have a pro-25 and a pro-70 and they don't have the problem. I've tried locking out the weather band and that didn't help. Whats going on?

4761. Re: [pro94owners] Weather Band interference

From: Dave
Topic: 4760 Message: 4761

The interference that you are reporting may not be interference at all. If you are monitoring something that is near to or happens to share one of the Weather Service frequencies, then you will hear the weather frequency. Railroad Band is near the Weather Service Band.

The frequency that you want to listen to could be interacting with an intermediate frequency of the scanner producing a heterodyne of the weather frequencies.

From: wrhugh
Topic: 4760 Message: 4762

The weather band is around 164.34. Anything from around 150 to above the weather band is a problem. That makes up all the frequencies that I scan. Railroad, Ambulance and a host of others. Every time my scanner picks up a frequency after about 1 sec. the weather band talks over it. I thought the Triple-Conversion Circuity would prevent this. And I don't understand why my pro-25 and pro-70 does not have this problem.
Thankyou for the reply.

From: Dave
Topic: 4760 Message: 4763

I sent our earlier correspondence to a ham radio club to which I belong and one of the other members offered this suggestion...

After looking at a manual online. It sounds like the Weather Alert function is turned on. More specifically the SAME (Specific Area Message Encoding). A tutorial can be found http://mods.dk/mod/radio_shack/PRO-94_Trunking_Scanner_Tutorials.pdf on how to enable and disable the feature.

Hope this give you some idea as to where to look next to resolving your problem.

From: wrhugh
Topic: 4760 Message: 4765

I checked the Weather Alert and it was off. I think I'll just have to live with the problem I'm having. The pro94 must be more sensitive than the pro25 and the pro70. That must be the reason why the weather band cuts in. Thanks again for the reply.

4766. Re: [pro94owners] Re: Weather Band interference

Yahoo group: pro94owners
Date: 2013-07-26 02:31:54 UTC
From: Jim Shorney
Topic: 4760 Message: 4766

Weather band transmitters run a lot of power. You may be suffering from fundamental overload of the front end. It might be interesting to try an inline attenuator in the antenna line. As to the other question about what is different between the scanners, the newer scanner probably has a "hotter" front end, and is more suscpetible to overload. They tend to build a lot of gain into these things with the idea that most folks will be listening from inisde their house with a "rubber dummy load" antenna.

I'm using a 17.5" antenna on the car. You made a good point about the overload. Let me look into that alittle more. Thanks for the reply.

I also sent a letter to ASK BOB and he said the same thing.

This is a very common problem in large cities where you live near a National Weather Service transmitting tower. Some scanners are more vulneerable than others. What you are encountering is called front-end overload, and this can cause a variety of problems including desensitization ("desense" which causes the entire radio to have degraded sensitivity), imaging (the same signal is heard on multiple frequencies as well as the frequency on which it is transmitting), and intermodulation ("intermod" which mixes two or more strong signals to produce the combination on a phantom frequency).

It can be reduced and in some instances eliminated by placing a notch filter, adjusted for the offending transmitter frequency, between the antenna and the scanner. An example of such a filter for weather broadcasts can be found at
http://www.grove-ent.com/ftr162ds.html

I'll try this as soon as I can.

From: Rocky_Beech
Topic: 4769 Message: 4769

Unfortunately for me our local Sheriff's department has replaced their Motorola system and I can no longer listen to the traffic. Therefore, I thought I would give the group first choice on the purchase of my Pro94 receiver before I list it on Ebay or Craigslist. Unlike the ones that have recently sold on Ebay with scratches and chips this one is cosmetically in excellent condition. Electronically it works fine.
I am asking $60 (the going rate on Ebay) plus $10 for shipping.
Let me know if anyone is interested. I will wait a couple of weeks.
Russell

It was, but actually my Pro-62 is a much better radio. Clearer sound and it picks up a lot more then the 94. Still where I am the transmittions have gone digital encrypted so it make most of the 94's abilities useless...Maybe if I move it somewhere with less $$$ the radios will come back to life..

Cheers, and good luck.

Wow, I'm surprised nobody has responded to you.

It's a very easy fix if you can obtain the
replacement power jack from RS or GRE. Check
with your local RS store for parts
assistance. The actual replacement should be a
breeze for anyone with reasonable electronic
repair skills. Check for a local ham radio
club. I'm sure one of their members could assist.

For a lot more $, I believe RS might still be able to repair it for you.

4776. Software for Pro-94

Yahoo group: pro94owners
Date: 2014-01-11 06:24:29 UTC
From: <ems_cougar@...>
Topic: 3194 Message: 4776

I have read a lot, before asking.....here is the trouble I am having: All the software, including Scan Cat, does not specifically denote pro-94, it skips that one. It will be either for the pro-94A or Pro-94B. I'm afraid of buying the wrong one. To "take off" from a Scotty quote on STNG, "I don't need no blasted 94 A or 94 B...I just need the plain 'ol pro 94!" Still looking for programming software that says it will work on the 94.

Mike

4777. Re: [pro94owners] Software for Pro-94

It is my understanding that only the PRO-94B has the cloning jack. The plain jane PRO-94 and the PRO-94A do not have this jack. Thus, it is only possible to program or clone the PRO_94B, NOT the earlier stock radios. This is why you should only see the PRO-94B model listed in a program for un-modified radios.

From Radio Reference:

The Pro-94A will trunk and scan conventional channels simultaneously unlike the Pro-94. The Pro-94A came out around April of 2000 and scans trunking systems for 1 second instead of 5, and has an auto backlight feature

** An updated version of this scanner known as the Pro-94B recently came out and now features a PC/Cloning interface and a much brighter backlight as well.

** Your radio, if it is stock, will not have the RF-IF jack on the side, only an earphone connector.

A cloning cable may be fabricated using 2 1/8inch mono jacks and shielded cable. See the Programming Cables section of this article for links to compatible cables to connect the PRO94B to a PC. http://wiki.radioreference.com/index.php/Pro-94 for more info.

An easier to use manual can be found at marksscanners.com
  http://marksscanners.com/index.shtml

** Note that this radio can NOT be updated to copy 800 mhz Motorola REBANDED systems. 800 mhz LTR, EDACS and Motorola systems that are not rebanded, no
problem.

Having programmed a PRO-94 using the keypad, all I can say is that it is a trip, easy enough but very repetitious, mainly because it is necessary to program each and every site frequency into the radio when programming a Motorola system, as opposed to just the site's Control Channel like the newer radios . Disconnecting the antenna while programming, at least in my case, made programming much easier without constant interruptions. It is a nice solid radio, but it does have certain limitations if you want to trunk Motorola systems, namely the rebanding issue mentioned above.

Enjoy scanning with your radio.

The label on the rear of the scanner will clealy show the model number of your scanner. If it says PRO-94B and you have the cloning (RF/IF) jack on the side of the radio then you are good to go. What is important is what the label on the radio says it is, rather than the box. The radio should have 2 jacks. The earphone jack and the cloning jack. If it does then you are in business.

From marksscanners: On the back of the scanner is the model number, 20-524 (probably under the belt clip). If there is an "A" in a box next to the number, it's a 94A. If there is a "B" in a box next to the number, it's a 94B. The basic differences are that the 94 will trunktrack or scan conventional frequencies, not both at the same time while the 94A will. The 94B is essentially the same as a 94A with the ability to be computer programmed and controlled.

Mike, the model number sticker should show the A or B Rev, if that's
what you have. Otherwise, it's an original. There's a date code on it,
too. Let me look at mine to refresh my memory how to read it.

From: Cougar!!
Topic: 3194 Message: 4783

Cool! It's a 94B then. After the CAT #, there is a B in the box in the back of the unit. Whew, thx! That is the first time I noticed the little box Had it outside with better light. Ok, cool...now I'll go ahead and buy the scan cat. Thx again!

One last question, ...while reading about programs, I noticed two distinct groupings of reviews. I see 1/2 on the side of Radio Reference and the other half on the side of Scan Cat, both with their noses sticking up at each other. Scan Cat claims Radio does not have a frequency list included with theirs, radio makes other claims. Is there a way to get an unbiased overview of each?

This radio is not very good. I purchased mine almost new for $15, the sound quality is terrible and with most listening gone digital and encrypted there isn't much to listen to. Actually my PRO-60 is a better radio. If I where you I would spend a lot more money on something that in up to date with the times..That would be in the $300 range...Good luck.

Cool! It's a 94B then. After the CAT #, there is a B in the box in the back of the unit. Whew, thx! That is the first time I noticed the little box Had it outside with better light. Ok, cool...now I'll go ahead and buy the scan cat. Thx again!

One last question, ...while reading about programs, I noticed two distinct groupings of reviews. I see 1/2 on the side of Radio Reference and the other half on the side of Scan Cat, both with their noses sticking up at each other. Scan Cat claims Radio does not have a frequency list included with theirs, radio makes other claims. Is there a way to get an unbiased overview of each?

The label on the rear of the scanner will clealy show the
model number of your scanner. If it says PRO-94B and you
have the cloning (RF/IF) jack on the side of the radio then
you are good to go. What is important is what the label on
the radio says it is, rather than the box. The radio should
have 2 jacks. The earphone jack and the cloning jack. If it
does then you are in business.

From marksscanners: On the back of the scanner is the
model number, 20-524 (probably under the belt clip). If
there is an "A" in a box next to the number,
it's a 94A. If there is a "B" in a box next to
the number, it's a 94B. The basic differences are that
the 94 will trunktrack or scan conventional frequencies, not
both at the same time while the 94A will. The 94B is
essentially the same as a 94A with the ability to be
computer programmed and controlled.

From: Dave Campbell
Topic: 3194 Message: 4785

Sorry if I'm repeating anything - the "A" version is indicated by an "A" in a square box immediately following the part number at the top of the I.D. label, and this is the rev with the PC interface. ScanCat Lite works fine with the PRO-94. I use a serial>USB adapter with an OEM 3.5mm> 9 pin interface cable and Windows XP/7/8 and although it's takes a bit of fiddling with the data file I've downloaded and written data from radioreference.com to the radio successfully. Bear in mind that you can only write to the PRO-94 memory with the interface but you cannot read its contents. I find that a little annoying but it is what it is.

It is my understanding that only the

PRO-94B has the cloning jack. The plain jane PRO-94

and

the

PRO-94A do not have this jack. Thus, it is only

possible

to

program or clone the PRO_94B, NOT the earlier stock

radios.

This is why you should only see the PRO-94B model

listed

in

a program for un-modified radios.

From Radio Reference:

The Pro-94A will trunk and scan conventional

channels

simultaneously unlike the Pro-94. The Pro-94A came

out

around April of 2000 and scans trunking systems for

1

second

instead of 5, and has an auto backlight feature

** An updated version of this scanner known as the

Pro-94B

recently came out and now features a PC/Cloning

interface

and a much brighter backlight as well.

** Your radio, if it is stock, will not have the

RF-IF

jack

on the side, only an earphone connector.

A cloning cable may be fabricated using 2 1/8inch

mono

jacks

and shielded cable. See the Programming Cables

section of

this article for links to compatible cables to

connect

the PRO94B to a PC.

http://wiki.radioreference.com/index.php/Pro-94 for

more info.

An easier to use manual can be found at

marksscanners.com

http://marksscanners.com/index.shtml

** Note that this radio can NOT be updated to copy

800 mhz

Motorola REBANDED systems. 800 mhz LTR, EDACS and

Motorola

systems that are not rebanded, no

problem.

Having programmed a PRO-94 using the keypad, all I

can say

is that it is a trip, easy enough but very

repetitious,

mainly because it is necessary to program each and

every

site frequency into the radio when programming a

Motorola

system, as opposed to just the site's Control

Channel

like

the newer radios . Disconnecting the antenna while

programming, at least in my case, made programming

much

easier without constant interruptions. It is a nice

solid

radio, but it does have certain limitations if you

want to

trunk Motorola systems, namely the rebanding issue

mentioned

above.

Enjoy scanning with your radio.

4790. Re: [pro94owners] Software for Pro-94

Yahoo group: pro94owners
Date: 2014-01-11 22:36:33 UTC
From: Cougar!!
Topic: 3194 Message: 4790

I got this one at a garage sale too, not a scratch on it. Dont feel like dropping much more money on a toy. I have not had a need for a scanner in the past 25 years, cause I retired from EMS a couple years ago, and always had access to agency radios. I like to listen in now and then....keep in touch with the streets. Sort of a "flip-flop" from people buying scanners to listen to me! :)

My question for you is....if you dislike this radio so much, why are you on in a group created for fans and owners of the Pro-94?

□

This radio is not
very good. I
purchased mine almost new for $15, the sound quality is
terrible and with most
listening gone digital and encrypted there isn't much to
listen to. Actually my
PRO-60 is a better radio. If I where you I would spend a lot
more money on
something that in up to date with the times..That would be
in the $300
range...Good luck.

Cool! It's a 94B then. After the CAT #, there is a
B in the box in the back

of the unit. Whew, thx! That is the first time I noticed
the little box Had it
outside with better light. Ok, cool...now I'll go
ahead and buy the scan cat.
Thx again!

One last question, ...while reading about programs, I
noticed two distinct groupings of reviews. I see 1/2 on
the side of Radio
Reference and the other half on the side of Scan Cat, both
with their noses
sticking up at each other. Scan Cat claims Radio does not
have a frequency
list included with theirs, radio makes other claims. Is
there a way to get an
unbiased overview of each?

The
label on the rear of the scanner will clealy show the
model number of your
scanner. If it says PRO-94B and you
have the cloning (RF/IF) jack on the
side of the radio then
you are good to go. What is important is what the
label on
the radio says it is, rather than the box. The radio
should
have 2 jacks. The earphone jack and the cloning jack. If it
does
then you are in business.

From marksscanners: On the back of
the scanner is the
model number, 20-524 (probably under the belt clip).
If
there is an "A" in a box next to the number,
it's a 94A. If there is
a "B" in a box next to

the number, it's a 94B. The basic differences are
that
the 94 will trunktrack or scan conventional frequencies,
not
both
at the same time while the 94A will. The 94B is
essentially the same as a
94A with the ability to be
computer programmed and controlled.

From: Cougar!!
Topic: 3194 Message: 4791

My first one when I was in EMT school was some sort of Radio Shack handheld. Dont remember the model. It had a scan head that separated from the battery pack. Scanning for Houston Police Dept was easy, 460.035-460.500 in ,25 increments, and bingo, you heard 98% of all HPD broadcasts. And they stayed on one channel, so you could just press "Hold" when you heard something cooking. Sure seems to have changed since then! I had Statewide Sheriff's Dept back up channel 4.....maybe 3? And LifeFlight in my car, and had the ability to transmit as well. Within a week of becoming an EMT in '89, I had my car outfitted with lights and sirens, and was running 911 on Northside with Harris County Emergency Corps. Today when I hear scanners It's more like watching a movie 'cause I know so much about what is really going on, I can picture it.

Cool!
It's a 94B then. After the CAT #, there is a B in
the box in the back of the
unit. Whew, thx! That is the first time I noticed the
little box Had it
outside with better light. Ok, cool...now I'll go
ahead and buy the scan
cat. Thx again!

One last question, ...while reading about programs, I
noticed two distinct groupings of reviews. I see 1/2 on
the side of Radio
Reference and the other half on the side of Scan Cat,
both with their noses
sticking up at each other. Scan Cat claims Radio does
not have a frequency
list included with theirs, radio makes other claims. Is
there a way to get
an unbiased overview of each?

The
label on the rear of the scanner will clealy show the
model number of
your scanner. If it says PRO-94B and you
have the cloning (RF/IF) jack on
the side of the radio then
you are good to go. What is important is what
the label on
the radio says it is, rather than the box. The radio
should
have 2 jacks. The earphone jack and the cloning jack. If
it
does then you are in business.

From marksscanners: On
the back of the scanner is the
model number, 20-524 (probably under the
belt clip). If
there is an "A" in a box next to the number,
it's a
94A. If there is a "B" in a box next to
the number, it's a 94B. The basic
differences are that
the 94 will trunktrack or scan conventional
frequencies, not
both at the same time while the 94A will. The 94B

is
essentially the same as a 94A with the ability to be
computer
programmed and controlled.

It
is my understanding that only the

PRO-94B has the
cloning jack. The plain jane
PRO-94

and

the

PRO-94A do not have this
jack. Thus, it is only

possible

to

program or clone the PRO_94B, NOT the earlier
stock

radios.

This is why you should only see
the PRO-94B model

listed

in

a program
for un-modified radios.

From
Radio Reference:

The Pro-94A
will trunk and scan conventional

channels

simultaneously unlike the Pro-94. The Pro-94A
came

out

around April of 2000 and scans
trunking systems for

1

second

instead of
5, and has an auto backlight feature

** An updated version of this scanner known as
the

Pro-94B

recently came out and now features
a PC/Cloning

interface

and a much brighter
backlight as well.

** Your
radio, if it is stock, will not have
the

RF-IF

jack

on the side, only an
earphone connector.

A cloning
cable may be fabricated using 2
1/8inch

mono

jacks

and shielded cable.
See the Programming Cables

section of

this
article for links to compatible cables
to

connect

the PRO94B to a PC.

http://wiki.radioreference.com/index.php/Pro-94 for

more info.

An easier to use
manual can be found at

marksscanners.com

http://marksscanners.com/index.shtml

** Note that this radio can NOT be updated to
copy

800 mhz

Motorola REBANDED systems. 800 mhz
LTR, EDACS and

Motorola

systems that are not
rebanded, no

problem.

Having programmed a PRO-94 using the keypad, all I

can
say

is that it is a trip, easy enough but
very

repetitious,

mainly because it is
necessary to program each and

every

site
frequency into the radio when programming
a

Motorola

system, as opposed to just the
site's Control

Channel

like

the newer
radios . Disconnecting the antenna while

programming,
at least in my case, made programming

much

easier without constant interruptions. It is a
nice

solid

radio, but it does have certain
limitations if you

want to

trunk Motorola
systems, namely the rebanding issue

mentioned

above.

Enjoy scanning with your
radio.

From: <bodyart@...>
Topic: 3194 Message: 4792

Don't get me wrong, I absolutely love my 94. Once I got past the programming, it has been able to do everything I ever wanted it to. When I worked for CDF, it was on the other side of my web gear keeping track of AirCo, local FDs and USFS - just because you have an HT, doesn't mean the other guys are on the same freq, y'know. Things were simple FM then. Now, with the all the trunking and changes coming up, I don't see it being able to function anywhere near as well as it used to. I scan for different reasons now - but I still need to be able to know who is doing what and where in real time. One of my concerns is that the new radios simply won't be able to physically tolerate the environmental strains I put gear through. That 94 went through countless SoCal brushfires and the two of us took so many AirCo hits that I still run into pink underwear in my closet from time to time.

My biggest temptation is to just pick up an unlocked Alinco next time I'm in the UK.

The 94 would have been a dream come true 9-10 years ago for me. Its a nice radio but where I live all the good listening has gone encrypted digital. Its great to listen to the weather, Highway patrol, ambulances, air and ham, but all the fun stuff like local police is verboten! My 60 is a rock, its been dropped more times they you can imagine. Sounds great and the Truck scanning, when it was the norm around here was incredible. side by side it still beats the 94 in reception, quickness and sound ..Its on right now! The 94 is still charging batteries for me! hee hee!

Here is a great site if you cant afford a new radio! http://www.broadcastify.com/listen/

Cheers

I've been into scanners for almost 30 years, and the Pro-94 was one that I never owned. I picked up a mint "B" model on eBay for under $40 recently to add to my collection. I have to say I'm pleasantly surprised. The radio works quite well. Frequency coverage is excellent. Audio is good. Sensitivity is good. Unlike how some people feel, I think the scanner is very simple to program by hand. Although it lacks many features of the current trunk tracking scanners, I really like the 94 "B" for the ridiculously low price I paid.

I picked up a -B Pro-94 the same way. For a total investment of $60 including a programming cable, a serial to USB adapter and software it was a great value. I tossed together a "J-Pole" antenna using 300 ohm twinlead and the bugger picks up just about anything I could expect from a much more expensive radio.When it's not doing its official "duty" as the source for a ScannerCast channel I can grab it and go when I leave the house knowing it has more than enough frequencies stored to outlive my pervasive boredom.

My local agencies are behind the curve with respect to trunking anyway so its limited functionality isn't an issue for me. Once I got used to the control layout I've found it to be one of the best little radios out there for the money and there are still plenty of them around. It came from a great scanner radio era and if you don't own one I suggest grabbing one while you can just for a spare in an emergency if nothing else. The remote programming only stores a data dump to memory (it doesn't read the memory contents back to the PC) so it's not imperative to find a "B" model just for the programming feature but it pays to ask and look closely at any pics on eBay before bidding.

Anyhow, that's my two cents. Personally,. I like it very much.

4800. Pro-94 not receiving

I have a pro-94. The unit turns on and scans, but will not receive anything. I had someone who repairs electronics look at it and he said the antenna wire is still connected, and all the boards are intact. I have dropped the unit a few times, but after this last drop (which was off a TV tray onto a carpeted floor) is when it stopped receiving. The guy who looked at it hooked it up to an external antenna and even took it up on the roof of where he worked. Any ideas???

George:

You did not write where you are. Have you checked Radio Reference to see if there has been a recent change in the type of radio operations of the agencies that you have been listening to? It is possible that your scanner is fine, but what you have been listening has recently changed to another mode of operation or other frequencies that you don't have in your scanner.

Try this... Turn your scanner on with the volume up. As the scanner is seelomg radio signals, turn down the squelch and if you hear the noisy hash, your radio may still be working.

Dave

Is there any sound or noise from the speaker? Have you tried plugging in an external audio amplifier or headphones to see if the headphone jack might have been damaged? The closed circuit part of the headphone jack that interrupts the audio to the speaker may not be closing properly.

Good luck

You could have cracked a circuit run or componet lead that you can't see. You have to look really close with a magnifier and move componets to see if one or more are loose on one end. A cracked solder run can often be repaired with a small iron and a touch of solder unless it's an internal run. I used to reverse-engineer equipment because the manufactours start having their own repair shops and wouldn't let the schedmatics out. At least until they started using multi-layer boards. I could do a two sided board fine but those multi-layer were just about impossible even when held up to a light. John N4SME

Very hard to tell without looking at it. To ensure that it's not picking anything up, I would transmit while scanning that frequency and see if it picks it up. If it picks it up, then everything is good and well with the reception issue. If not, you may have knocked something loose.

Just my 2 Cents....

Topic: 4814 Message: 4814

I recently acquired a Pro-94a in good shape off of Ebay. Upon on arrival I installed new alkaline double A's and the unit wouldn't power on. I plugged the unit up to the AC Adapter and it powered on and works. I unplugged the AC Adapter and the unit stayed on running off of the batteries.
I thought all was well, programmed in some frequencies and headed trackside yesterday. The unit worked fine for awhile, then unexpectedly powered off. I did notice a trace amount of blue corrosion on one of the contact springs. I plugged in the unit to the cigarette lighter adapter and it operates fine, unplug and it will run off the batteries for approx 15-20 minutes, shuts down and will not power back on unless I plug in the adapter.

Anyone have any experience on this issue? How to correct?

Thank you in advance!
EH

From: ericvtx1300r@...
Topic: 4818 Message: 4818

Thank you to those that offered solutions to my situation.
Here is the update. I cracked open the case and removed one of the spring battery holders from the PCB side of the case. It was really corroded good. Cleaned that up and gave it a try, encountered the same issue. After giving it a good look over, I noticed on the clip holder side of the case the battery terminals connect to a piece of metal that must contacts the PCB. I cleaned the small square on the PCB with some CRC Electrical Contact Cleaner, reassembled and that seems to have resolved the issue.
I'm surprised how the corrosion followed the path from the batteries back to the PCB.
Thanks again.
Eric

Voltage, current, and polarity should be molded
into the case, next to the power jack.

My original Pro 94 (no A), is 9V @ 900mA,
negative tip. I don't have the specs on the (A) version.
